

Contents

1	Introduction	1
1.1	The Concept of Fractional Signals and Systems in Biomedical Engineering	1
1.2	Short History of Fractional Calculus and Its Application to the Respiratory System	2
1.3	Emerging Tools to Analyze and Characterize the Respiratory System	6
1.3.1	Basic Concepts of Fractional Calculus	6
1.3.2	Fractional-Order Dynamical Systems	8
1.3.3	Relation Between Fractal Structure and Fractal Dimension	9
1.4	Summary	11
2	The Human Respiratory System	13
2.1	Anatomy and Structure	13
2.2	Morphology	14
2.3	Specific Pulmonary Abnormalities	14
2.4	Structural Changes in the Lungs with Disease	19
2.5	Non-invasive Lung Function Tests	21
2.6	Summary	22
3	The Respiratory Impedance	23
3.1	Forced Oscillation Technique Lung Function Test	23
3.2	Frequency Response of the Respiratory Tissue and Airways	25
3.3	Lumped Models of the Respiratory Impedance	27
3.3.1	Selected Parametric Models from Literature	27
3.3.2	The Volunteers	31
3.3.3	Identification Algorithm	32
3.3.4	Results and Discussion	32
3.4	Summary	37
4	Modeling the Respiratory Tract by Means of Electrical Analogy	39
4.1	Modeling Based on a Simplified Morphology and Structure	39

4.2	Electrical Analogy	46
4.2.1	Elastic Tube Walls	49
4.2.2	Viscoelastic Tube Walls	50
4.2.3	Generic Recurrence in the Airways	51
4.3	Some Further Thoughts	52
4.4	Summary	53
5	Ladder Network Models as Origin of Fractional-Order Models . .	55
5.1	Fractal Structure and Ladder Network Models	55
5.1.1	An Elastic Airway Wall	55
5.1.2	A Viscoelastic Airway Wall	61
5.2	Effects of Structural Asymmetry	64
5.3	Relation Between Model Parameters and Physiology	66
5.3.1	A Simulation Study	66
5.3.2	A Study on Measured Respiratory Impedance	70
5.4	Summarizing Thoughts	72
6	Modeling the Respiratory Tree by Means of Mechanical Analogy .	77
6.1	Basic Elements	77
6.2	Mechanical Analogue and Ladder Network Models	79
6.3	Stress–Strain Curves	84
6.3.1	Stepwise Variations of Strain	84
6.3.2	Sinusoidal Variations of Strain	86
6.4	Relation Between Lumped FO Model Parameters and Viscoelasticity	89
6.5	Implications in Pathology	96
6.6	Summary	97
7	Frequency Domain: Parametric Model Selection and Evaluation .	99
7.1	Overview of Available Models for Evaluating the Respiratory Impedance	99
7.2	FO Model Selection in Relation to Various Frequency Intervals .	100
7.2.1	Relation Between Model Parameters and Physiology . . .	101
7.2.2	Subjects	102
7.2.3	Results	103
7.3	Implications in Pathology	108
7.3.1	FOT Measurements on Adults	108
7.3.2	Healthy vs. COPD	110
7.3.3	Healthy vs. Kyphoscoliosis	114
7.3.4	FOT Measurements on Children	117
7.3.5	Healthy vs. Asthma in Children	119
7.3.6	Healthy vs. Cystic Fibrosis in Children	124
7.4	Parametric Models for Multiple Resonant Frequencies	127
7.4.1	High Frequency Range of Respiratory Impedance	127
7.4.2	Evaluation on Healthy Adults	129
7.4.3	Relation to Physiology and Pathology	135
7.5	Summarizing Thoughts	137

8	Time Domain: Breathing Dynamics and Fractal Dimension	139
8.1	From Frequency Response to Time Response	139
8.1.1	Calculating the Impulse Response of the Lungs	139
8.1.2	Implications in Pathology	140
8.2	Mapping the Impedance Values	144
8.2.1	Multi-dimensional Scaling	144
8.2.2	Classification Ability with Pathology	148
8.3	Revealing the Hidden Information in Breathing at Rest	157
8.3.1	Pressure–Volume Loops, Work of Breathing and Fractal Dimension	157
8.3.2	Relations with Pathology	160
8.3.3	Fractal Dimension and Identification of Power-Law Trends	161
8.4	Summary	167
9	Non-linear Effects in the Respiratory Impedance	169
9.1	The Principles of Detection of Non-linear Distortions in a Non-linear System	169
9.1.1	Reducing the Breathing Interference	169
9.1.2	Non-linear Distortions	172
9.2	Non-linear Effects from Measuring Device	175
9.3	Clinical Markers for Quantifying Non-linear Effects	178
9.4	Non-linear Effects Originated with Pathology	179
9.5	Detecting Non-linear Distortions at Low Frequencies	181
9.5.1	Prototype Device with Feedforward Compensation	181
9.5.2	Respiratory Impedance at Low Frequencies	182
9.5.3	Non-linear Distortions at Low Frequencies	186
9.5.4	Relation to the FO Model Parameters	190
9.6	Summary	193
10	Conclusions	197
10.1	Main Results	197
10.2	Important Directions for Research	199
10.2.1	Relating the Fractional Order Parameter Values to Pathology	199
10.2.2	Low Frequency Measurements	199
	Appendix Useful Notes on Fractional Calculus	201
	References	207
	Subject Index	215

The Human Respiratory System
An Analysis of the Interplay between Anatomy,
Structure, Breathing and Fractal Dynamics
Ionescu, C.M.
2013, XXV, 217 p. 148 illus., 129 illus. in color.,
Hardcover
ISBN: 978-1-4471-5387-0
