1	Introduction to Condition Monitoring of Transformer	
	Insulation	1
1.1	Introduction	1
1.1.1	Transformer Failure Pattern	2
1.1.2	Failure Statistics for Power Transformers.	3
1.2	Aging Electrical Power Infrastructure	4
1.2.1	Classification of Visually Detectable Faults in Transformers	5
1.2.2	Transformer End-of-Life	5
1.2.3	Maintenance Strategy	6
1.2.4	Monitoring and Diagnostics	7
1.3	Diagnosis Method	8
1.3.1	Requirements of Diagnosis Method.	8
1.3.2	Design Acceptance Test.	8
1.3.3	Age Related Failure	10
1.4	Transformer Oil-Paper Insulation System	12
1.4.1	Partial Discharge Measurement.	14
1.4.2	Chemical Methods for Condition Assessment of Transformers	15
1.4.3	Condition Assessment of Transformers by Dielectric Response Measurement	18
1.4.4	Monitoring of Transformer Winding Displacement	21
1.5	Remaining Life Analysis	23
	References	24
2	Impulse Fault Analysis.	27
2.1	Introduction	27
2.2	Impulse Test Methods as per IEC	28
2.3	Faults in a Winding and Data Acquisition of Fault Current	28
2.4	Impulse Fault Current Analysis	29
2.4.1	Conventional Methods	32
2.4.2	Modern Analysis Tools	32
2.4.3	How to Build an Expert System for Impulse Fault Analysis	55

2.5	Recent Challenges and Research Directions	56
	References	57
3	Partial Discharge Measurement and Analysis	61
3.1	Introduction	61
3.2	What is Partial Discharge?	61
3.2.1	Stress Mechanisms Activated by PD	62
3.2.2	PD Inception and Extinction in Closed Cavity	63
3.3	Partial Discharge Measurement	68
3.3.1	Electrical Method of PD Measurement	70
3.3.2	Acoustic Method of PD Measurement	79
3.3.3	Ultra-High Frequency Method of PD Measurement.	86
3.4	Combined Use of Different PD Detection Methods	95
3.4.1	Absolute Time Approach in Combined Application of Electrical/UHF and Acoustic Methods.	96
3.5	Analysis of Partial Discharge Signal	97
3.5.1	Importance of Denoising	97
3.5.2	Various Denoising Methodologies.	98
3.5.3	Cross-Wavelet Transform-Based Feature Extraction from PD Pulses.	99
3.5.4	Classification of Partial Discharge Patterns	102
3.5.5	Pulse Sequence Analysis	104
3.6	Future Scope and Challenges	110
	References	111
4	Conventional Diagnostic Techniques	117
4.1	Introduction	117
4.2	Chemical Techniques.	118
4.2.1	Moisture Analysis in Transformer Oil	118
4.2.2	Dissolved Gas Analysis	122
4.2.3	Measurement of Degree of Polymerization.	132
4.2.4	Furan in Oil Analysis	137
4.3	Electrical Techniques.	142
4.3.1	Insulation Resistance Measurement	142
4.3.2	Dielectric Loss-Factor ($\tan\delta$) Measurement	146
4.4	Possible Ways to Overcome the Shortcomings	147
	References	149
5	Time Domain Dielectric Response Measurements	153
5.1	Introduction	153
5.2	Basic Theory of Time Domain Dielectric Response Measurement.	154
5.3	Time Domain Response Measurements	156
5.3.1	Polarization and Depolarization Current Measurements.	156

5.3.2	Recovery Voltage Measurement	157
5.3.3	Concept of RV Spectra and the Central Time Constant	157
5.3.4	Need for Using Electrometer in PDC and RVM	158
5.3.5	PDC Measurement Algorithm.	159
5.3.6	RV Measurement Algorithm.	160
5.3.7	Avoiding the Transient Phenomena During PDC and RVM; A Practical Case	161
5.4	Time Domain Response of Transformer Insulation	161
5.4.1	Effect of Oil Conductivity	163
5.4.2	Effect of Temperature	164
5.4.3	Effect of Paper (Solid Insulation) Conductivity and Moisture	166
5.4.4	Effect of Insulation Aging	168
5.5	Effect of Noise on Dielectric Response Measurements in Field Conditions	169
5.5.1	Use of Denoizing Filter	170
5.5.2	Detailed Description of Developed Hybrid Filter	172
5.6	Modeling Dielectric Response.	178
5.6.1	Determination of Equivalent Circuit Parameters from Time Domain Measurements	179
5.6.2	Computation of Recovery Voltage Data from Equivalent Circuit Parameters.	181
5.7	Interpretation of Time Domain Data Using Dielectric Response Model	182
5.7.1	Quantitative Measure of Insulation Condition from RV Measurements.	185
5.7.2	Quantitative Measure Of Insulation Condition from PDC Measurements	186
5.8	Future Directions and Challenges	187
	References	189
6	Frequency Domain Spectroscopy	193
6.1	Introduction	193
6.2	Basic Theory of Frequency Domain Spectroscopy.	194
6.3	Frequency Domain Measurements	196
6.3.1	Frequency Response of Transformer Insulation.	199
6.3.2	Effect of Conductivity	200
6.3.3	Effect of Temperature	202
6.3.4	Effect of Moisture in Insulation	207
6.3.5	Effect of Insulation Aging	210
6.3.6	Effect of Acids	211
6.3.7	Effect of Winding Barriers and Spacers.	214

6.3.8	Various Factors Affecting Dielectric Response Measurements in Field Conditions	215
6.4	Modelling Dielectric Response in Frequency Domain	219
6.4.1	Determination of Equivalent Circuit from FDS Data	221
6.5	Advantages and Disadvantages of Dielectric Response Measurements in Time-Domain and Frequency-Domain.	222
6.6	Future Works in FDS.	223
	References	224
7	Frequency Response Analysis	227
7.1	Introduction	227
7.2	Methods of Frequency Response Analysis	228
7.3	Swept Frequency Response Analysis	229
7.3.1	Basic Measurement	229
7.3.2	Basic Features of SFRA Response	231
7.3.3	FRA Measurement Connection Methods	235
7.3.4	Transfer Function Features with Reference to Windings	236
7.3.5	Assessment of Mechanical Integrity of Transformer Winding	243
7.3.6	Comparison of Frequency Response Measurements.	248
7.3.7	Key Factors Affecting Frequency Response Measurements.	251
7.3.8	Online FRA Measurement	256
7.4	Future Scope of Work	258
	References	259
8	Remaining Life Analysis.	261
8.1	Introduction	261
8.2	Life Estimation Based on Thermal Modeling	262
8.2.1	Aging Acceleration Factor	264
8.2.2	Hot-Spot Factor	266
8.3	Life Estimation Based on Cellulose Degradation Kinetics	267
8.3.1	Life Estimation from DP Value	270
8.3.2	Life Estimation from Furan Value.	271
8.3.3	Life Estimation from Furan and DGA Results	272
8.4	Probabilistic Approach Towards Life Estimation.	273
8.5	Avenues for Further Work	273
	References	274
