1	Introduction	1
	Thomas J. Dolan and Alexander Parrish	
1.1	Why Develop Fusion Reactors?	1
1.1.1	Energy Demand	2
1.1.2	Energy Supply	3
1.2	How Can We Make Fusion Reactors?	5
1.2.1	Nuclear Energy	6
1.2.2	Plasma Heating and Confinement	7
1.2.3	Fusion Reactions	8
1.2.4	Magnetic Confinement	8
1.2.5	Energy Gain Ratio Q	12
1.2.6	Fusion Power Density	13
1.2.7	Reactor Power Balance	18
1.2.8	Effect of Impurities	21
1.2.9	Ignition	22
1.3	What Experiments are Being Conducted?	23
1.3.1	Tokamaks	23
1.3.2	Stellarators	24
1.3.3	Reversed Field Pinches (RFP)	26
1.3.4	Spheromaks	28
1.3.5	Field Reversed Configurations (FRC)	31
1.3.6	Magnetic Mirrors	33
1.3.7	Inertial Confinement Fusion	33
1.4	What has been Accomplished?	34
1.5	What are the Future Plans?	37
1.5.1	International Cooperation	37
1.5.2	ITER	37
1.5.3	Power Plant Design Studies	39
1.6	Problems	41
1.7	Review Questions	41
	References	43

12.4.1	Hazards	638
12.4.2	Materials Shortages	638
12.4.3	Summary of Environmental Effects.	641
12.5	Safety Analysis.	641
12.5.1	Normal Operations	642
12.5.2	Accidents	643
12.5.3	Failure Mode and Effect Analysis	644
12.5.4	Occupational Radiation Exposure (ORE)	645
12.5.5	ARIES-AT Safety Analysis	646
12.5.6	US Safety Standard	648
12.6	Nonproliferation	649
12.7	Summary	649
12.8	Problems	649
12.9	Review Questions	650
	References	651
13	Power Plant Designs	653
	Thomas J. Dolan, Lester M. Waganer and Lee C. Cadwallader	
13.1	Introduction: Attractive Power Plants	653
13.1.1	Economics	654
13.1.2	Regulatory Simplicity	655
13.1.3	Public Acceptance.	656
13.2	Reliability, Availability, and Maintainability	657
13.2.1	Reliability	657
13.2.2	Availability	659
13.2.3	Maintainability	662
13.2.4	Remote Handling	667
13.3	Economics	668
13.3.1	Competitiveness of Fusion Energy	672
13.4	Economy of Scale.	672
13.4.1	Economy of Scale Issues	672
13.4.2	Reasons for Economy of Scale	674

13.5	European Power Plant Designs	676
13.6	Japanese Power Plant Designs	679
13.6.1	Helical Reactor	679
13.6.2	Spherical Tokamak	681
13.7	Chinese Power Plant Designs	681
13.7.1	Power Plant for Electricity Generation.	682
13.7.2	Hydrogen Production Plant.	683
13.7.3	Fusion-Fission Hybrid Power Plants	684
13.7.4	Tritium Breeding Module (TBM) for ITER and DEMO.	685
13.7.5	Materials Research	686
13.8	United States Power Plant Designs	687
13.8.1	ARIES Designs.	687
13.8.2	ARIES-AT	687
13.8.3	Stellarators	691
13.9	Summary	691
13.10	Problems	692
13.10.1	Reliability	692
13.10.2	Availability	692
13.10.3	Maintainability	693
13.11	Review Questions	693
	References	694
14	Fusion–Fission Hybrid Reactors	699
	Ralph W. Moir and Wally Manheimer	
14.1	Introduction: Why Fusion–Fission Hybrids?	699
14.1.1	Advantages Over Fission Breeder Reactors	702
14.2	Fusion Drivers	705
14.2.1	Tokamaks	705
14.2.2	Other Magnetic Confinement Devices	707
14.2.3	Inertial Fusion	707
14.3	Blankets and Neutronics	710
14.3.1	Basic Processes.	710
14.3.2	Infinite Homogeneous Medium.	715
14.3.3	Two-Zone Heterogeneous Blanket.	717
14.4	Blanket Designs for Fuel production	720
14.4.1	Molten-Salt Blanket Designs-Fission-Suppressed Fusion Breeder	720
14.4.2	Fission-Suppressed Blanket Based on Liquid Lithium Multiplier.	721
14.4.3	Gas-Cooled Designs: Fast-Fission Fuel Producers	724
14.4.4	Liquid–Metal Blanket Designs	724

14.5	Blanket Designs for Waste Incineration	726
14.5.1	Hard Spectrum Sodium-Cooled, Minor-Actinide Burner (University of Texas)	727
14.5.2	Hard Spectrum, Sodium Cooled, All Transuranics Burner (Georgia Tech University)	729
14.5.3	Molten Salt Waste Burner, All Transuranics.	730
14.5.4	Pu Waste Burning Molten Salt Inertial Fusion Reactor	731
14.6	Blanket Designs for High Power Production	731
14.7	Safety	732
14.8	Nonproliferation	733
14.8.1	Proliferation Resistance from ^{232}U	734
14.9	The Energy Park.	735
14.10	Problems	738
14.11	Review Questions	738
