Contents

1 Introduction 1
1.1 Antenna Arrays in the Automotive Industry: Applications and Frequency Ranges 1
1.1.1 Intelligent Transportation Systems. 2
1.1.2 Space Diversity System for FM, Digital Terrestrial TV, and RKE/TPMS Devices 10
1.1.3 Direct Broadcasting Satellite TV. 11
1.2 Antenna Arrays: From Simple Configuration to Advanced Design 13
1.2.1 Fixed Beam Directional Arrays. 13
1.2.2 Arrays with Simple (ON/OF) Electronically Switchable Elements 14
1.2.3 Electronically Controlled Phased Antenna Arrays with Single Output Receiver. 15
1.2.4 Adaptive Antenna Arrays. 17
References 18

Part I Performances and Processing Methods

2 Typical Array Geometries and Basic Beam Steering Methods 23
2.1 Introduction 23
2.2 Linear Array Factor for Equally Spaced Elements. 24
2.3 Planar Array Factor 29
2.4 Array Factor for Circular Configuration 31
2.5 Array Factor for Electronically Controlled Phased Arrays 32
2.5.1 Design with Analog Phase Shifters 32
2.5.2 System with Digital Phase Shifters 33
2.5.3 Pin Diode Digital Phase Shifter Topology 39

2.6 Antenna Array Performances 40
2.6.1 Array Element Radiation Pattern and Mutual Coupling 40
2.6.2 Array Radiation Pattern 45
2.7 Digital Beamforming 48
References 52

3 Smart Beamforming: Main Adaptive Techniques 55
3.1 Adaptive Systems 55
3.1.1 Introduction 55
3.1.2 Maximum Signal-to-Noise Ratio: Applebaum Loop 57
3.1.3 Least Mean Square Algorithm 60
3.1.4 Adaptation Based on Phase Variations 63
3.2 Systems with Multi-Antenna Elements at the Transmitter and Receiver Ends 64
3.2.1 SISO, MISO, SIMO, and MIMO Design: Brief Introduction 64
3.2.2 SISO System and Communication Channel 67
3.2.3 MIMO System Capacity 68
3.2.4 Correlation Effect and MIMO Capacity Value 70
3.2.5 Mutual Coupling and MIMO Capacity 74
3.2.6 SIMO Diversity Techniques 75
3.3 High Resolution Processing Algorithms for Direction Finding (DF) Applications 78
References 84

4 Simplified Smart Beamforming 87
4.1 Butler Matrix Topology 87
4.2 Sectored Antenna Array 89
4.3 Array with Parasitic Elements (ESPAR) 90
4.4 Single Receiver Antenna Array with Digital Beamforming 93
4.5 Time-Modulated Array Configuration 96
4.6 Partially Adaptive Small Phased Array with Three-Bit Digital Phase Shifters 100
4.7 A Novel Small Phased Array with Two-Bit Phase Shifters for DOA Applications 103
4.7.1 Array Topology 103
4.7.2 Description of the Processing Algorithm 105
4.7.3 Algorithm Analysis 106
4.7.4 Simulation Results 107
4.7.5 Experimental Results 108
References 111

Part II Practical Design for Automotive

5 Base Station Array Examples for Communication with Vehicles 117
5.1 Fixed Beam Directional Arrays 117
5.1.1 Linear Polarized Toll Collection Design for 915 MHz . . . 117
5.1.2 Circular Polarized 16-Element Microstrip Array for Toll Collection Application 120
5.1.3 Microstrip Array with Omnidirectional Radiation Pattern in Horizontal Plane for 2.45 GHz. 121
5.1.4 Printed Dipole Array with Reflector Plane for 2.45 GHz Band 122
5.2 Antenna Arrays with Electronically Controlled Beam 124
5.2.1 System with ON/OFF Parasitic Microstrip Structure 124
5.2.2 Array for Horizontal Over 360° Beam Steering with Switchable Printed Landstorfer/Yagi 125
5.2.3 Example of Practical Array with Simple 4 × 4 Butler Matrix 127
5.2.4 Circular Array with Electronically Controllable Dipole Elements 129
5.2.5 Single RF Channel Digital SMILE Array. 130
5.3 Parking Lot Vehicle Localization Antenna Systems 131
5.3.1 Communication Scenarios 132
5.3.2 Single Channel Eight Element Circular Array for 2.4 GHz Applications 133
5.3.3 Example of Conformal Smart 2.45 GHz Array for Lighting Pole Installation at the Parking Area 134
References 137

6 Compact Car-Mounted Arrays 139
6.1 Design Examples for 2.45 GHz 139
6.1.1 Reactively Steered Ring Array Printed on Car Glass 139
6.1.2 Steerable Disk Patch Configuration 141
6.1.3 Low Profile Vertically Polarized F-Antenna Array for Roof Mount Applications 142
6.2 Prototype Samples for 5.2 and 5.9 GHz Frequency Bands 145
6.2.1 Endfire Array for ITS Applications Providing Forward/Backward Radiation 145
6.2.2 System Integrated into the Vehicle Body 146
6.2.3 Compact Smart Topology for Wi-Max Radio 147
6.2.4 Roof-Mounted Four-Element Patch Array for V2V Communication 149
6.2.5 Low Profile Beam Switched Loop Design 152

6.2.6 Low Profile Omnidirectional Horizontally Polarized Topology . . . 153
6.3 Broadcasting Vehicle-Mounted Multi-Element Systems . . . 155
6.3.1 FM Radio Space Diversity Topology . . . 155
6.3.2 Examples of Diversity Systems for Digital Terrestrial TV . . . 156
6.3.3 Satellite TV Arrays . . . 158
6.4 Diversity Design for RKE/RSE/TPMS . . . 163
6.5 MIMO Capacity Estimation for the Vehicle-Mounted Antenna Systems . . . 163
6.5.1 Distributed Roof-Mounted Four-Element Array . . . 163
6.5.2 Comparison of SISO, SIMO, and MIMO Systems for Moving Cars . . . 166
6.5.3 Impact of Mutual Coupling on MIMO Vehicle-to-Vehicle System . . . 168
References . . . 169

7 Radar Arrays for Vehicle Applications . . . 173
7.1 Introduction . . . 173
7.2 Brief Review of Anti-Collision Radar Automotive Antenna Arrays . . . 176
7.2.1 Patch Double Planar Topology . . . 176
7.2.2 Combined Long- and Short-Range Spherical Lens Configuration . . . 177
7.2.3 Yagi-Uda Array for 76 GHz Band . . . 177
7.2.4 Parabolic Transreflector Array System . . . 178
7.2.5 Topology with Microstrip Reflect Array . . . 179
7.2.6 Array Concept with Cylindrical Lens Configuration . . . 179
7.2.7 System with Rotman Lens . . . 180
7.3 Systems for Road Traffic Flow Estimation . . . 182
7.4 Experiment Results of High Resolution System for Traffic Flow Estimation . . . 184
References . . . 184
