

Contents

1	Introduction	1
	Sextant	2
	Chronometer	2
	Long Range Navigator	3
	GPS	6
	Maps	7
	References	8
2	Communications Technologies	9
	Coding	9
	Modulation	11
	Spreading	13
	Orthogonal Frequency Division Multiplexing	13
	Multiple Access	15
	Multiple Input Multiple Output	15
	Electromagnetic Radiation Propagation	18
	The Multipath Effect	19
	The Large-Scale Fading Effect	20
	The Small-Scale Fading or Multipath Effect	21
	Multipath Mitigation Techniques	24
	802.11N And 802.15.4 System On Chip	25
	References	27
3	Radio Frequency Positioning	29
	Time of Flight	29
	Time of Arrival	30
	Measuring Time of Arrival	32
	Time of Arrival Measurement Through Spread Spectrum	32
	Time of Arrival Measurement Through UWB-IR	34
	Sources of Errors in Time of Flight Methods	36

Time Difference of Arrival	37
Round Trip Travel Time	38
Angle of Arrival	39
Angle Measurement	41
Signal Strength	44
Other Methods	47
References	48
4 Global Positioning System	51
The Basics of GPS	52
The Basic Equations of GPS	53
The Problems in Real-World GPS	54
The GPS Radio Signals	56
The GPS Receiver	61
Augmented GPS	62
References	63
5 Non-radio Indoor Positioning Systems	65
Sonic and Ultrasonic Waves	65
Sonic Communication	66
Sonic Positioning	67
Inertial Navigation	69
Simultaneous Locationing and Mapping	74
Augmented Reality	80
References	80
6 Some Real-World Indoor Location Systems	83
Aeroscout	83
Zebra	85
Sonitor	87
Awarepoint	91
ISO/IEC 24730	93
802.11v	97
802.15.4A/F	102
References	103
7 The Business of Location	105
The GPS Market	105
The Location-Based Services Market	109
The Indoor Location Market	112
