

Contents

1	Introduction	1
1.1	Definition of Fault Tolerance	1
1.2	Fault Tolerance and Redundancy	2
1.3	Applications of Fault Tolerance	2
	References	4
2	Fundamentals of Dependability	5
2.1	Notation	5
2.2	Dependability Attributes	6
2.2.1	Reliability	6
2.2.2	Availability	7
2.2.3	Safety	8
2.3	Dependability Impairments	9
2.3.1	Faults, Errors, and Failures	9
2.3.2	Origins of Faults	10
2.3.3	Common-Mode Faults	12
2.3.4	Hardware Faults	12
2.3.5	Software Faults	14
2.4	Dependability Means	15
2.4.1	Fault Tolerance	15
2.4.2	Fault Prevention	16
2.4.3	Fault Removal	16
2.4.4	Fault Forecasting	17
2.5	Summary	17
	References	19
3	Dependability Evaluation Techniques	21
3.1	Basics of Probability Theory	22
3.2	Common Measures of Dependability	24
3.2.1	Failure Rate	24
3.2.2	Mean Time to Failure	27

3.2.3	Mean Time to Repair	28
3.2.4	Mean Time Between Failures	30
3.2.5	Fault Coverage	30
3.3	Dependability Modeling	31
3.3.1	Reliability Block Diagrams	31
3.3.2	Fault Trees	33
3.3.3	Reliability Graphs	33
3.3.4	Markov Processes	34
3.4	Dependability Evaluation	37
3.4.1	Reliability Evaluation Using Reliability Block Diagrams	38
3.4.2	Dependability Evaluation Using Markov Processes	39
3.5	Summary	48
	References	54
4	Hardware Redundancy	55
4.1	Redundancy Allocation	56
4.2	Passive Redundancy	57
4.2.1	Triple Modular Redundancy	58
4.2.2	N -Modular Redundancy	63
4.3	Active Redundancy	65
4.3.1	Duplication with Comparison	65
4.3.2	Standby Redundancy	67
4.3.3	Pair-And-A-Spare	73
4.4	Hybrid Redundancy	75
4.4.1	Self-Purging Redundancy	76
4.4.2	N -Modular Redundancy with Spares	79
4.5	Summary	80
	References	85
5	Information Redundancy	87
5.1	History	87
5.2	Fundamental Notions	88
5.2.1	Code	88
5.2.2	Encoding	89
5.2.3	Information Rate	89
5.2.4	Decoding	89
5.2.5	Hamming Distance	90
5.2.6	Code Distance	90
5.3	Parity Codes	92
5.3.1	Definition and Properties	92
5.3.2	Applications	93
5.3.3	Horizontal and Vertical Parity Codes	95

5.4	Linear Codes	96
5.4.1	Basic Notions	96
5.4.2	Definition	98
5.4.3	Generator Matrix	99
5.4.4	Parity Check Matrix	101
5.4.5	Syndrome	102
5.4.6	Construction of Linear Codes	102
5.4.7	Hamming Codes	105
5.4.8	Lexicographic Parity Check Matrix	107
5.4.9	Applications of Hamming Codes	108
5.4.10	Extended Hamming Codes	109
5.5	Cyclic Codes	110
5.5.1	Definition	110
5.5.2	Polynomial Manipulation	111
5.5.3	Generator Polynomial	112
5.5.4	Parity Check Polynomial	114
5.5.5	Syndrome Polynomial	115
5.5.6	Implementation of Encoding and Decoding	115
5.5.7	Separable Cyclic Codes	118
5.5.8	Cyclic Redundancy Check Codes	121
5.5.9	Reed-Solomon Codes	122
5.6	Unordered Codes	122
5.6.1	M -of- N Codes	123
5.6.2	Berger Codes	124
5.7	Arithmetic Codes	128
5.7.1	AN Codes	129
5.7.2	Residue Codes	130
5.8	Summary	131
	References	135
6	Time Redundancy	137
6.1	Transient Faults	137
6.2	Permanent Faults	138
6.2.1	Alternating Logic	138
6.2.2	Recomputing with Modified Operands	142
6.3	Summary	153
	References	154
7	Software Redundancy	157
7.1	Software Versus Hardware	157
7.2	Single-Version Techniques	159
7.2.1	Fault Detection Techniques	159
7.2.2	Fault Containment Techniques	160
7.2.3	Fault Recovery Techniques	161

7.3	Multi-Version Techniques.	166
7.3.1	Recovery Blocks.	166
7.3.2	N -Version Programming	168
7.3.3	N Self-Checking Programming	170
7.3.4	Importance of Design Diversity	171
7.4	Software Testing	172
7.4.1	Statement Coverage.	172
7.4.2	Branch Coverage	173
7.5	Summary	174
	References	177
8	Conclusion.	181
	Index	183
