

Contents

1	Abrasive Tools and Bonding Systems.....	1
1.1	Abrasive Grain Characteristics.....	1
1.1.1	Grain Shape.....	1
1.1.2	Attritious Wear Factors	6
1.1.3	Grain Fracture Toughness	10
1.2	Silicon Carbide.....	17
1.3	Fused Alumina	20
1.3.1	Grain Types	25
1.4	Alumina–Zirconia	28
1.5	Engineered Alumina Abrasives.....	32
1.5.1	“Ceramic” Sol-Gel Based Abrasives	32
1.5.2	Agglomerated Grain.....	37
1.6	Superabrasives.....	38
1.6.1	Diamond.....	38
2	Vitrified Bonding Systems and Heat Treatment.....	45
2.1	Vitrified Bonding Systems	45
2.2	Grinding Wheel Structure Formation During Heat Treatment.....	46
2.2.1	Physicochemical Processes That Occur During Firing.....	48
2.2.2	Ceramic Bond Minerals That Form During Firing	50
2.3	Case Study I: Interfacial Compounds and Their Effect on Grinding Wheel Wear	57
2.3.1	Wear Mechanisms	59
2.3.2	Microstructure of Abrasive Grains.....	62
2.3.3	Experimental Procedure	65
2.3.4	Experimental Results	67
2.3.5	Discussion of Interfacial Compounds on Grinding Wheel Wear	72

2.4	Case Study II: Dissolution of Quartz and Its Effect on Grinding Wheel Wear	75
2.4.1	Dissolution Models for Vitrified Grinding Wheel Bonds	77
2.4.2	Experimental Procedures	79
2.4.3	Experimental Results	83
2.5	Discussion	91
Conclusions	95
References	96

High Performance Grinding and Advanced Cutting Tools

Jackson, M.J.; Hitchiner, M.P.

2013, VIII, 100 p. 83 illus., 16 illus. in color., Softcover

ISBN: 978-1-4614-3115-2
