

Contents

1	Signals and Their Representations	1
1.1	Signal Spaces and the Approximation Problem	1
1.2	Inner Product, Norm and Representations by Finite Sums of Elementary Functions	4
1.2.1	Inner Product and Norm	4
1.2.2	Orthogonality and Linear Independence	7
1.2.3	Representations by Sums of Orthogonal Functions	12
1.2.4	Nonorthogonal Expansion Functions and Their Duals	14
1.2.5	Orthogonalization Techniques	16
1.3	The LMS Approximation and the Normal Equations	19
1.3.1	The Projection Theorem	19
1.3.2	The Normal Equations	21
1.3.3	Generalizations of the Normal Equations	22
1.3.4	LMS Approximation and Stochastic Processes*	25
1.4	LMS Solutions via the Singular Value Decomposition	27
1.4.1	Basic Theory Underlying the SVD	27
1.4.2	Solutions of the Normal Equations Using the SVD	30
1.4.3	Signal Extraction from Noisy Data	32
1.4.4	The SVD for the Continuum	35
1.4.5	Frames	37
1.4.6	Total Least Squares	39
1.4.7	Tikhonov Regularization	43
1.5	Finite Sets of Orthogonal Functions	44
1.5.1	LMS and Orthogonal Functions	44
1.5.2	Trigonometric Functions	45
1.5.3	Orthogonal Polynomials [1]	47
1.6	Singularity Functions	52
1.6.1	The Delta Function	52
1.6.2	Higher Order Singularity Functions	59

1.6.3	Idealized Signals	61
1.6.4	Representation of Functions with Step Discontinuities	63
1.6.5	Delta Function with Functions as Arguments	65
1.7	Infinite Orthogonal Systems	66
1.7.1	Deterministic Signals	66
1.7.2	Stochastic Signals: Karhunen–Loeve Expansion*	68
2	Fourier Series and Integrals with Applications to Signal Analysis	75
2.1	Fourier Series	75
2.1.1	Pointwise Convergence at Interior Points for Smooth Functions	75
2.1.2	Convergence at Step Discontinuities	78
2.1.3	Convergence at Interval Endpoints	82
2.1.4	Delta Function Representation	84
2.1.5	The Fejer Summation Technique	86
2.1.6	Fundamental Relationships Between the Frequency and Time Domain Representations	92
2.1.7	Cosine and Sine Series	94
2.1.8	Interpolation with Sinusoids	98
2.1.9	Anharmonic Fourier Series	104
2.2	The Fourier Integral	107
2.2.1	LMS Approximation by Sinusoids Spanning a Continuum	107
2.2.2	Transition to an Infinite Observation Interval: The Fourier Transform	108
2.2.3	Completeness Relationship and Relation to Fourier Series	109
2.2.4	Convergence and the Use of CPV Integrals	111
2.2.5	Canonical Signals and Their Transforms	114
2.2.6	Basic Properties of the FT	117
2.2.7	Convergence at Discontinuities	128
2.2.8	Fejer Summation	128
2.3	Modulation and Analytic Signal Representation	132
2.3.1	Analytic Signals	132
2.3.2	Instantaneous Frequency and the Method of Stationary Phase	134
2.3.3	Bandpass Representation	140
2.3.4	Bandpass Representation of Random Signals*	143
2.4	Fourier Transforms and Analytic Function Theory	148
2.4.1	Analyticity of the FT of Causal Signals	148
2.4.2	Hilbert Transforms and Analytic Functions	149
2.4.3	Relationships Between Amplitude and Phase	152
2.4.4	Evaluation of Inverse FT Using Complex Variable Theory	154

2.5	Time-Frequency Analysis	159
2.5.1	The Uncertainty Principle	159
2.5.2	The Short-Time Fourier Transform	163
2.6	Frequency Dispersion	168
2.6.1	Phase and Group Delay	168
2.6.2	Phase and Group Velocity	171
2.6.3	Effects of Frequency Dispersion on Pulse Shape	173
2.6.4	Another Look at the Propagation of a Gaussian Pulse When $\beta'''(\omega_0) = 0$	180
2.6.5	Effects of Finite Transmitter Spectral Line Width*	182
2.7	Fourier Cosine and Sine Transforms	185
3	Linear Systems	191
3.1	Fundamental Properties	191
3.1.1	Single-valuedness, Reality, and Causality	191
3.1.2	Impulse Response	193
3.1.3	Step Response	196
3.1.4	Stability	196
3.1.5	Time-invariance	197
3.2	Characterizations in terms of Input/Output Relationships	199
3.2.1	LTI Systems	199
3.2.2	Time-varying Systems	201
3.3	Linear Systems Characterized by Ordinary Differential Equations	207
3.3.1	First-Order Differential Equations	207
3.3.2	Second-Order Differential Equations	213
3.3.3	N-th Order Differential Equations	225
4	Laplace Transforms	235
4.1	Single-Sided Laplace Transform	235
4.1.1	Analytic Properties	235
4.1.2	Singularity Functions	239
4.1.3	Some Examples	240
4.1.4	Inversion Formula	241
4.1.5	Fundamental Theorems	243
4.1.6	Evaluation of the Inverse LT	248
4.2	Double-Sided Laplace Transform	260
4.2.1	Definition and Analytic Properties	260
4.2.2	Inversion Formula	261
4.2.3	Relationships Between the FT and the Unilateral LT	267
5	Bandlimited Functions Sampling and the Discrete Fourier Transform	271
5.1	Bandlimited Functions	271
5.1.1	Fundamental Properties	271
5.1.2	The Sampling Theorem	274

- 5.1.3 Sampling Theorem for Stationary Random Processes* 276
- 5.2 Signals Defined by a Finite Number of Samples 278
 - 5.2.1 Spectral Concentration of Bandlimited Signals 281
 - 5.2.2 Aliasing 283
- 5.3 Sampling 286
 - 5.3.1 Impulse Sampling 286
 - 5.3.2 Zero-Order Hold Sampling and Reconstruction 287
 - 5.3.3 BandPass Sampling 290
 - 5.3.4 Sampling of Periodic Signals 293
- 5.4 The Discrete Fourier Transform 297
 - 5.4.1 Fundamental Definitions 297
 - 5.4.2 Properties of the DFT 300
- 6 The Z-Transform and Discrete Signals 311**
 - 6.1 The Z-Transform 311
 - 6.1.1 From FS to the Z-Transform 311
 - 6.1.2 Direct ZT of Some Sequences 316
 - 6.1.3 Properties 317
 - 6.2 Analytical Techniques in the Evaluation of the Inverse ZT 320
 - 6.3 Finite Difference Equations and Their Use in IIR and FIR Filter Design 327
 - 6.4 Amplitude and Phase Relations Using the Discrete Hilbert Transform 331
 - 6.4.1 Explicit Relationship Between Real and Imaginary Parts of the FT of a Causal Sequence 331
 - 6.4.2 Relationship Between Amplitude and Phase of a Transfer Function 333
 - 6.4.3 Application to Design of FIR Filters 334
- A Introduction to Functions of a Complex Variable 337**
 - A.1 Complex Numbers and Complex Variables 337
 - A.1.1 Complex Numbers 337
 - A.1.2 Function of a Complex Variable 341
 - A.2 Analytic Functions 342
 - A.2.1 Differentiation and the Cauchy–Riemann Conditions 342
 - A.2.2 Properties of Analytic Functions 344
 - A.2.3 Integration 345
 - A.3 Taylor and Laurent Series 349
 - A.3.1 The Cauchy Integral Theorem 349
 - A.3.2 The Taylor Series 351
 - A.3.3 Laurent Series 354
 - A.4 Singularities of Functions and the Calculus of Residues 356
 - A.4.1 Classification of Singularities 356
 - A.4.2 Calculus of Residues 361

Signals and Transforms in Linear Systems Analysis

Wasyliwskyj, W.

2013, XIV, 375 p., Hardcover

ISBN: 978-1-4614-3286-9
