

Contents

1	General Overview of the Interstellar Medium	1
1.1	Introduction	1
1.2	Density of the Interstellar Medium	2
1.3	The Interstellar Zoo	3
1.4	Historical Sketch	6
1.4.1	Bright Nebulae	6
1.4.2	Dark Nebulae	8
1.4.3	Diffuse Interstellar Gas	9
1.5	The Oort Limit	10
	Bibliography	14
2	The Interstellar Radiation Field	17
2.1	Introduction	17
2.2	Radio-Frequency Integrated Radiation	18
2.2.1	Bremsstrahlung Radiation	18
2.2.2	Synchrotron Radiation (Magnetobremsstrahlung)	20
2.2.3	Line Radiation	21
2.3	Cosmic Background Radiation	21
2.4	Integrated Radiation Field	22
2.5	Radiative Transfer	24
2.5.1	Radiative Transfer Equation	24
2.5.2	Transfer Equation Solution	25
2.5.3	Numerical Example: Energy Density	28
2.6	High-Energy Radiation	29
	Bibliography	31
3	Spectral Line Formation	33
3.1	Introduction	33
3.2	Thermodynamic Equilibrium Equations	34
3.2.1	Maxwellian Velocity Distribution Function	34
3.2.2	Boltzmann Equation	35

3.2.3	Saha Equation	36
3.2.4	The Planck Function	37
3.3	Radiative Transfer	37
3.4	Einstein Coefficients	38
3.4.1	Emission Coefficient	38
3.4.2	Absorption Coefficient	39
3.4.3	Relations Between the Einstein Coefficients	40
3.5	Spectral Line Profile	41
3.5.1	Absorption Line Profile	41
3.5.2	Doppler Profile	42
3.5.3	Lorentz Profile	45
3.5.4	Voigt Profile	45
3.5.5	Integrated Absorption Cross Section	47
3.5.6	Relations Between the Einstein Coefficients and the Oscillator Strength	48
3.5.7	Induced Emissions	48
3.6	The Source Function	49
	Bibliography	50
4	Interstellar Emission and Absorption Lines	53
4.1	Introduction	53
4.2	Optical Recombination Lines	53
4.2.1	Recombination Coefficient	54
4.2.2	Recombination Line Analysis	54
4.2.3	Results	55
4.3	The H 21 cm Emission Line	56
4.3.1	Introduction	56
4.3.2	Brightness Temperature	57
4.3.3	H Column Density Calculation	57
4.3.4	Results	59
4.4	The H 21 cm Absorption Line	60
4.4.1	Observations	60
4.4.2	Results	60
4.5	Broad Absorption Lines	61
4.5.1	Broad Absorption Lines Intensity: H and H ₂	61
4.5.2	Example: Interstellar Lyman- α Line	62
4.5.3	Results	65
4.5.4	Lines of Highly Ionized Elements	66
4.6	Curve of Growth	66
4.7	Narrow Absorption Lines	70
4.7.1	Introduction	70
4.7.2	Problems in the Analysis of the Curves of Growth	72
4.7.3	Empirical Curve of Growth	73
4.7.4	Interstellar Abundances	73
	Bibliography	76

5	Excitation in the Interstellar Medium	77
5.1	Introduction	77
5.2	Statistical Equilibrium	77
5.3	Collisional Excitation	78
5.4	Collisional/Radiative Excitation	78
5.4.1	The Statistical Equilibrium Equation	78
5.4.2	Relation Between Rates γ_{jk} and γ_{kj}	79
5.4.3	Collisional Excitation Rate	80
5.4.4	Relations Between Cross Sections	81
5.4.5	Cross Section and Collision Strength	82
5.4.6	Relation Between Coefficients γ_{kj} and $\Omega(j,k)$	83
5.4.7	Example: O II and O III in Photoionized Nebulae	83
5.4.8	Example: H Collisional Excitation in H I Regions	86
5.4.9	Other Processes	88
5.5	Two-Level Atoms	89
5.5.1	Deviation Coefficients	89
5.5.2	Application to a Planck Radiation Field	90
5.5.3	H Excitation in H I Regions	91
5.6	Three-Level Atoms	91
5.6.1	Example: Electron Density in Planetary Nebulae	92
	Bibliography	94
6	Ionization in the Interstellar Medium	95
6.1	Ionization Equilibrium	95
6.2	Photoionization Rate	97
6.3	Radiative Recombination Coefficient	98
6.3.1	Milne Relation	99
6.3.2	Oscillator Strength for Bound-Free Transitions	100
6.4	Photoionization of Hydrogen	101
6.4.1	Photoionization Cross Section	102
6.4.2	Radiative Recombination Cross Section	105
6.4.3	Radiative Recombination Coefficient	105
6.5	Ionization of H by Thermal Electrons	107
6.5.1	Thermal Electrons and Coronal Gas	107
6.5.2	H Ionization	108
6.6	Ionization of H: Cosmic Rays and X-Rays	109
6.7	Ionization of Heavy Elements	111
6.7.1	Photoionization	112
6.7.2	Collisional Ionization by Thermal Electrons	115
6.7.3	Ionization by Cosmic Rays and X-Rays	117
6.7.4	Charge Exchange Reactions	118
6.7.5	Example 1: Element with Two Ionization States	118
6.7.6	Example 2: Element with Three Ionization States	120
	Bibliography	122

7	Interstellar Gas Heating	123
7.1	Introduction	123
7.2	Equilibrium Temperature	124
7.3	Cooling Timescale	125
7.4	Photoionization of Neutral Atoms	126
7.5	Electron–Ion Collisional Excitation	127
7.6	The Cooling Function in H I Regions	127
7.6.1	Cooling by Electron–Ion Collisional Excitation	128
7.6.2	Cooling by Electron–H Collisional Excitation	128
7.6.3	Cooling by H–Ion Collisional Excitation	129
7.6.4	Cooling by H–H ₂ Collisional Excitation	131
7.6.5	Other Processes	132
7.6.6	The Cooling Function	132
7.6.7	The Cooling Time	133
7.7	The Heating Function in H I Regions	134
7.7.1	Heating by Stellar Radiation	134
7.7.2	Heating by Cosmic Rays	136
7.7.3	Heating by H ₂ Molecules Formation	137
7.7.4	Heating by Photoelectrons Ejected by Dust Grains	139
7.7.5	Other Processes	141
7.8	Heating of the Intercloud Medium	141
7.9	Interstellar Gas Instabilities	141
	Bibliography	146
8	Interstellar Ionized Nebulae	147
8.1	Introduction	147
8.1.1	H II Regions	147
8.1.2	Planetary Nebulae	149
8.1.3	Supernovae Remnants	150
8.2	Transition Between H II and H I Regions	151
8.2.1	Transition Region Thickness	151
8.2.2	Strömgren Radius	151
8.3	Degree of Ionization of Hydrogen	155
8.3.1	Photoionization of an H Nebula	157
8.4	Dust Grains in H II Regions	160
8.4.1	Ionizing Photons Absorption by Dust Grains	160
8.4.2	Ionized Region Radius	161
8.5	Temperatures in H II Regions	164
8.5.1	Heating by H Photoionization	164
8.5.2	Cooling by Electron–Proton Recombination	166
8.5.3	Cooling by Electron–Ion Collisional Excitation	166
8.5.4	Photoelectric Heating by Dust Grains	168
8.5.5	Other Processes	170
8.5.6	Cooling Timescale	171

8.6	Radio Recombination Lines	171
8.6.1	High-Energy Level Excitation	172
8.6.2	Temperature and Recombination Lines	173
8.6.3	Maser Emission in H II Regions	175
8.7	Physical Conditions in Ionized Nebulae	176
8.7.1	Plasma Diagnostics	176
8.7.2	Abundances	178
	Bibliography	181
9	Interstellar Dust Grains	183
9.1	Introduction	183
9.2	Efficiency Factors	183
9.2.1	Definitions	184
9.2.2	Extinction Efficiency Factor	184
9.2.3	Scattering Efficiency Factor	185
9.2.4	Absorption Efficiency Factor	186
9.2.5	Efficiency Factors and Mie Theory	186
9.2.6	Efficiency Factor for Radiation Pressure	189
9.3	Interstellar Extinction	190
9.3.1	Color Excess	190
9.3.2	Spatial Distribution of Dust Grains	192
9.3.3	Extinction Curve	192
9.3.4	Total and Selective Extinction	193
9.3.5	Grain-to-Gas Ratio	195
9.3.6	Diffuse Interstellar Bands	197
9.4	Interstellar Polarization	197
9.4.1	Variation with Extinction	198
9.4.2	Variation with Wavelength	199
9.4.3	Galactic Magnetic Field	199
9.5	Physical Properties of the Grains	201
9.5.1	Sizes	201
9.5.2	Temperature	202
9.5.3	Electric Charge	204
9.5.4	Chemical Composition	206
9.6	Energy Emission by Grains	208
9.6.1	Infrared Bands	209
9.6.2	Continuum Emission	209
9.7	Formation of Interstellar Grains	210
	Bibliography	214
10	Interstellar Molecules	215
10.1	Introduction	215
10.2	Molecular Structure	217
10.3	H ₂ in Interstellar Clouds	219
10.3.1	H–H Collision Timescale	220
10.3.2	H ₂ Formation on the Surface of the Grains	220

10.3.3	Detection of the Interstellar H_2 Molecule	221
10.3.4	CO and H_2 in the Interstellar Medium	222
10.4	Molecular Reactions in Gaseous Phase	223
10.4.1	Ion-Molecule Reactions	224
10.4.2	Neutral–Neutral Reactions	225
10.4.3	Radiative Association	226
10.4.4	Radiative Recombination	226
10.4.5	Dissociative Recombination	227
10.4.6	Charge Exchange Reactions	227
10.5	Molecule Destruction	227
10.5.1	Photodissociation	227
10.5.2	Collisional Dissociation	228
10.6	Reaction Kinetics	229
10.6.1	Reaction Rates	229
10.6.2	Abundance Calculation	232
10.7	Molecular Abundances	233
10.7.1	Diffuse Clouds	233
10.7.2	Dense Molecular Clouds	234
	Bibliography	236
11	Dynamics and Equilibrium in the Interstellar Medium	239
11.1	Introduction	239
11.2	Dynamical Processes	239
11.2.1	Supernovae and the Interstellar Medium	240
11.2.2	Expansion of H II Regions	242
11.2.3	Stellar Winds and the Interstellar Medium	244
11.2.4	Diffuse Cloud Collisions	245
11.3	Interstellar Medium Equilibrium	247
11.4	Gravitational Collapse and Star Formation	248
11.4.1	Jeans Mass	248
11.4.2	Ambipolar Diffusion	249
11.4.3	Collapse and Fragmentation	249
	Bibliography	250
	Constants and Units	253
	Index	255
