1	The ENOX Protein Family	1
1.1	The ENOX Protein Family Members	1
1.2	ENOX Proteins Are Associated with the External Cell Surface as Ecto Proteins and Are Shed into the Environment	4
1.3	Two Activities of ENOX Proteins Alternate	6
1.4	ENOX Proteins Participate Directly in the Enlargement Phase of Cell Growth	7
1.5	ENOX Proteins Are Resistant to Degradation and Tend to Form Insoluble Aggregates	7
1.6	ENOX Proteins Are Dicopper Proteins Lacking Both Iron and Flavin	8
1.7	The Oscillatory Behavior Complicates Assays of ENOX Activities	10
1.8	The Distinctive 2 + 3 Pattern of ENOX Oscillations Is a Unifying Characteristic of All Family Members	11
1.9	ENOX Proteins Differ Markedly from the NOX Proteins of Host Defense	13
1.10	ENOX Proteins Are of Low Specific Activity	14
1.10.1	Natural Electron Donors and Acceptors for Cell Surface-Associated ENOX Proteins	14
1.10.2	Hydroquinones as Natural Electron Donors	15
1.10.3	Reduced Pyridine Nucleotides as Artificial Electron Donors	15
1.10.4	Protein Thiols and Tyrosines as Electron Donors for arNOX Proteins and Generation of Superoxide	15
1.10.5	Aggregation and Formation of Amyloid	16
1.11	Why an External NADH Oxidase?	17
1.12	Summary	17

2	Measurements of ECTO-NOX (ENOX) Activities.....	19
2.1	Spectrophotometric Assay of NADH Oxidase	21
2.2	Statistical Analysis	22
2.3	Data Reduction Methods.....	23
2.3.1	Diode Array Instruments	30
2.4	Measurement of Hydroquinone Oxidase Activity with Reduced Coenzyme Q ₁₀ or Phylloquinone as Substrate	32
2.4.1	Enzyme Assay for Reduced Coenzyme Q ₁₀ Oxidase	32
2.4.2	Enzyme Assay for Reduced Phylloquinone Oxidase	33
2.5	Dissolved Oxygen Measurement	35
2.6	Estimation of Protein Disulfide-Thiol Interchange Activity.....	38
2.7	Preparation of Scrambled RNase Substrate	38
2.8	Estimates of Protein Disulfide-Thiol Interchange from Enzymatic Assay of Dipyrldyl-Dithio Substrate Cleavage.....	41
2.9	Measurement of <i>Trans</i> -Plasma Membrane Redox by Reduction of Cell-Impermeable Dyes	42
2.9.1	CoQ ₁ Can Function as an Intermediate Electron Carrier in WST-1 Reduction.....	42
2.9.2	Measurement of Plasma Membrane Electron Transport Based on WST-1 Reduction.....	42
2.10	Summary	44
3	The Constitutive ENOX1 (CNOX)	47
3.1	ENOX1 Function	47
3.2	ENOX1 Cloning.....	50
3.3	ENOX1 Characterization	53
3.4	ENOX1 Activity Requires the Presence of Copper	57
3.5	Copper Binding and Site-Directed Mutagenesis of Potential Copper-Binding Sites	58
3.6	Response to Nucleotides	60
3.7	Aggregation and Electron Microscopy	61
3.8	ENOX1 Fulfills Essential Roles in Cell Enlargement and Cellular Time-Keeping.....	62
3.9	ENOX1 of Human Platelets.....	62
3.10	Summary	62
4	Role in Plasma Membrane Electron Transport	65
4.1	Composition of the PMET	65
4.1.1	NADH Coenzyme Q Reductases	66
4.1.2	Hydroquinones	68
4.1.3	Terminal Oxidases.....	69
4.2	Electron Donors and Acceptors	73
4.3	Rates of PMET.....	73
4.4	Energetics of PMET.....	76
4.5	PMET Driven Outward Proton Pumping and Alkalinization of the Cytoplasm.....	78

4.6	PMET Function in Electron Import	80
4.7	PMET and Growth	81
4.7.1	Cell Cycle Check Point Control of Cell Enlargement.....	81
4.7.2	PMET Activity and Growth Are Correlated.....	82
4.8	Regulation of PMET	82
4.8.1	Feedback Regulation of PMET	85
4.8.2	ENOX Cell Surface Receptor Proteins	86
4.9	PMET and Glycolysis	86
4.9.1	PMET and Glycolysis of Cancer Cells.....	86
4.10	PMET Links to Major Signaling Pathways	88
4.10.1	Sirtuins	89
4.10.2	Sphingolipid Rheostat	91
4.10.3	NADH Modulation of PTEN Provides Link of PMET to Ras-Raf-Mek-Erk, PI3-AKT-mTOR and NF- κ B	91
4.10.4	AMP-Activated Protein Kinase.....	93
4.10.5	Hypoxia	93
4.11	NAD ⁺ Homeostasis	95
4.12	Summary	95
5	Role in the Enlargement Phase of Cell Growth	97
5.1	Cell Enlargement Linked to ENOX Activities.....	97
5.2	ECTO NADH Oxidase of Liver Plasma Membranes Stimulated by Hormones and Growth Factors.....	98
5.3	ECTO NADH Oxidase of Rat Hepatoma Plasma Membrane Constitutively Activated and No Longer Growth Factor or Hormone-Responsive	98
5.3.1	Thiol Reagents.....	100
5.4	Relationship to Growth	101
5.4.1	Plants	101
5.4.2	Vertebrate Cells	113
5.5	Pathological Implications.....	123
5.5.1	Apoptosis.....	123
5.6	Physical Membrane Displacements	124
5.7	ATP- and p97 AAA-ATPase-Dependent and Drug-Inhibited Vesicle Enlargement Reconstituted Using Synthetic Lipids and Recombinant Proteins	124
5.8	Summary	138
6	Roles as Ultradian Oscillators of the Cells Biological Clock.....	141
6.1	Time Keeping Properties	141
6.2	Molecular Studies	142
6.3	Studies with Deuterium Oxide.....	148
6.4	The Role of Copper.....	149
6.5	The Copper Clock.....	150

6.6	EXAFS Investigations	152
6.7	Oscillations Inherent in the Structure of Water.....	154
6.8	Period Length Determined by Ionic Radius of Liganded Cation	158
6.9	Spectral Evidence for Disequilibrium of <i>ortho:para</i> Spin States in Liquid Water That Oscillate	161
6.10	Other Mechanisms Proposed for <i>ortho/para</i> Conversions and Departures from Their Equilibrium Ratio of 3:1	164
6.11	The 24-min Period Has Properties of a Carrier Wave Generated from the Basic Underlying <i>ortho–para</i> Water Oscillations? The Heart Rate Model	166
6.11.1	Growth Oscillations of Elongating Pollen Tubes	168
6.12	Phasing of the Rhythm.....	168
6.12.1	EMF Sets the Copper Clock.....	169
6.13	A Mechanism to Explain How Oscillations of Redox Potential of Aqueous Solutions Become Synchronous and Remain So	172
6.14	ENOX Clock and Cancer.....	177
6.15	Are ENOX Oscillators Linked to the Drivers of the Circadian Clock and How Are They Linked?.....	178
6.16	Why Oscillate? A Consequence of Active Sites in Metalloproteins?	184
6.17	Summary	185
7	Other Potential Functional Roles of ENOX Proteins	187
7.1	Cell Cycle Control	187
7.2	Gene Regulation.....	187
7.3	Endomembrane Function, Membrane Displacements, Vesicle Budding	188
7.3.1	Membrane Budding.....	188
7.3.2	Energy Requirements for Physical Membrane Displacement	190
7.4	Endocytosis and Autophagy.....	192
7.5	Host Defense	193
7.6	pH Control	193
7.7	Lipid Oxidation	195
7.7.1	arNOX Inhibitors and Prevention of Coronary Artery Disease	197
7.8	Life Extension and Calorie Restriction.....	197
7.9	Control of Apoptosis and Cell Survival.....	198
7.10	Neurodegenerative Disorders.....	200
7.11	Memory	201
7.12	Gametogenesis	202

7.13	Role in Viral Pathogenesis	203
7.13.1	ENOX2 Inhibitor (–)-Epigallocatechin-3-Gallate Blocks Virus Infections Alone and in Combination with Capsicum Vanilloids and Other Green Tea Catechins	205
7.13.2	Brefeldin A and Antitumor Quassinoids.....	207
7.14	Summary	209
8	ENOX2 (tNOX) and Cancer	211
8.1	ENOX2 Discovery	211
8.2	ENOX2 Activity.....	213
8.2.1	Biochemistry	217
8.3	Sequence	218
8.4	Structural Properties.....	222
8.4.1	ENOX2 Protein Phosphorylation	228
8.5	ENOX2 Presence and Cancer	228
8.5.1	ENOX2 Autoantibodies Generated in Cancer Patients.....	230
8.5.2	ENOX2 Gene Present in Genome as a Single Copy	230
8.5.3	ENOX2 Lacks Intrinsic Membrane-Binding Motifs.....	230
8.5.4	ENOX2 Has Properties of a Prion and Is Protease Resistant.....	231
8.6	ENOX2 Has Characteristics of an Oncofetal Protein	233
8.7	Transgenic Mouse Strain Overexpressing ENOX2	235
8.8	Alternative Splicing as Basis for Specific ENOX2 Localization to the Cell Surface.....	242
8.8.1	Full-Length ENOX2 mRNA Identical to That of Cancer Cells Exists in Human Non-cancer Cells and Tissues	247
8.8.2	Full-Length 71 kDa ENOX2 Protein Not Translated	248
8.8.3	Cancer-Specific Expression of ENOX2	250
8.8.4	Splice Variants of ENOX2 Were Found in Cancer Cells	250
8.8.5	Expression of Exon 4 Minus and Exon 5 Minus Forms of ENOX2 in COS Cells	250
8.8.6	Delivery of 34 kDa ENOX2 Protein to the Plasma Membrane	252
8.8.7	Mutation of Met 231 Blocked Expression of the Exon 4 Minus Splice Variant.....	252
8.8.8	Subcellular Localization of E4m ENOX2-EGFP and Full-Length ENOX2-EGFP Fusion Proteins	253
8.8.9	Regulation of ENOX2 Expression	256
8.9	hnRNP F Splicing Factor Directs Formation of the Exon 4 Minus Variant of ENOX2.....	257
8.10	Summary	259

9	Age-Related ENOX Proteins (arNOX)	261
9.1	arNOX Discovery	264
9.2	Measurement of Superoxide Formation by arNOX.....	266
9.3	Characteristics.....	268
9.4	arNOX Cloning.....	272
9.5	Characterization of Recombinant arNOX Proteins.....	279
9.6	arNOX as a Biomarker of Aging	284
9.7	Role in Skin Aging.....	286
9.8	Role in Oxidation of Serum Lipoproteins.....	291
9.9	arNOX Activity Correlates with Life Span in Sea Urchins	297
9.10	arNOX in Plants.....	298
9.11	arNOX Inhibitors	299
9.11.1	Coenzyme Q.....	299
9.11.2	Botanical Sources of arNOX Inhibitors	305
9.12	Beneficial Biological Function Associated with Superoxide Production: Physiological Roles of Superoxide	307
9.13	NQO1 (Cytoplasmic NAD(P)H: Quinone Oxidoreductases, DT-Diaphorase EC 1.6.99.2) and Plasma Membrane Electron Transport.....	309
9.14	Summary	310
10	The Auxin-Stimulated ENOX and Auxin Stimulation of Plant Growth	313
10.1	Early Evidence for Auxin-Modulated Enzymes Involved in Plant Cell Enlargement	313
10.2	The Plasma Membrane as the Subcellular Location of the Auxin-Responsive Mechanism	317
10.3	Direct Effects of Auxin on Signaling Molecules Fail to Parallel Those of Mammalian Growth Factors.....	318
10.4	Evidence for a Redox-Related Plasma Membrane-Located Auxin Target	321
10.4.1	Separation of Auxin-Activated and Constitutive NADH Oxidase Activities.....	327
10.5	Auxin-Stimulated NADH Activity and Growth Oscillates with a Period Length of 24 min.....	327
10.6	Golgi Apparatus Transport Important to Sustained Cell Enlargement but not Specifically Required for Auxin-Induced Cell Enlargement.....	331
10.7	Response of ENOX of Isolated Plasma Membrane Vesicles to Osmotica	331
10.8	Inhibitors of the Auxin-Stimulated NADH Oxidase of Plants	332
10.9	Cell Elongation Oscillates with a Period of 24 min and Exhibits a Second set of Oscillations in Response to 2,4-D	335

10.10	The Auxin-Stimulated ENOX Has Properties of a Prion: How 2,4-D Kills Plants	337
10.11	Summary	347
11	Cancer Therapeutic Applications of ENOX2 Proteins	345
11.1	PMET as a Target for Anticancer Drug Development	348
11.1.1	Arsenicals as Unspecific Anticancer PMET Inhibitors.....	349
11.2	Inhibition of PMET and Induction of Apoptosis	350
11.2.1	Mechanism of Induction of Apoptosis When Plasma Membrane Electron Transport Is Inhibited.....	351
11.3	Mechanism of Growth Arrest When Plasma Membrane Electron Transport Is Inhibited	355
11.3.1	Elevation of Ceramide	355
11.3.2	Links for Elevated Ceramide and Cell Cycle Arrest.....	355
11.3.3	ENOX2 Inhibitors Slow the Growth of HeLa Cells and Induce Apoptosis in Cancer But Not in Noncancer Cells	356
11.3.4	ENOX Inhibitors Increase Cytosolic NADH Levels.....	358
11.3.5	Increased NADH Resulting from ENOX2 Cell Surface Inhibition Inhibits Plasma Membrane- Associated Sphingosine Kinase (SK) and Lowers Levels of Prosurvival Sphingosine-1-Phosphate.....	359
11.3.6	Sphingomyelinase.....	359
11.4	ENOX2 Inhibitors	362
11.4.1	Vanilloids (Capsaicinoids) as PMET Inhibitors	363
11.4.2	Anthracycline Antibiotics	368
11.4.3	Cisplatin Targets ENOX2 of the PMET	377
11.4.4	Antitumor Sulfonylureas	378
11.4.5	Antitumor Quassinoids Target ENOX2.....	387
11.4.6	Acetogenins	390
11.4.7	EGCg	391
11.4.8	Phenoxodiol Targets the PMET Through Inhibition of ENOX2.....	400
11.4.9	Sulforaphane.....	408
11.4.10	Suramin.....	409
11.4.11	Callipeltin	409
11.5	Nonsteroidal Anti-inflammatory Drugs	410
11.6	Retinoids and Calcitriol Agents of Differentiation	411
11.6.1	Retinoic Acid Inhibition of PMET	411
11.6.2	Retinoid Inhibition of ENOX2	411
11.7	ENOX2-Directed Therapeutic Antibodies	412

11.8	Antisense.....	414
11.9	ENOX Inhibitors Enhance the Response of Tumors to Radiation	415
11.10	ENOX2 as a Target for Cancer Prevention Through Early Intervention	415
11.11	Summary	416
12	Cancer Diagnostic Applications of ENOX2 Proteins.....	419
12.1	Cancer Cell Surface ENOX2 Shed into Sera as Biomarkers of Cancer Presence.....	420
12.1.1	Biomarker Discovery Based on ENOX2 Activity.....	421
12.1.2	Characteristics of ENOX2 as Cancer Biomarker Based on Activity	421
12.1.3	Transcript Variants Detected by Two- Dimensional Gel-Western Blot Analysis Are Cancer Site-Specific Biomarkers.....	424
12.1.4	Transcript Variants of ENOX2	425
12.2	Two-Dimensional Gel-Western Blot Cancer Detection System	425
12.2.1	Two-Dimensional Gel-Western Blot Analysis of ENOX2 Transcript Variants Provide for Very Early Detection.....	428
12.3	Early Intervention	430
12.4	ENOX2 Autoantibodies May Preclude Conventional ELISA Tests for Early Appearance of ENOX2 in Serum or Plasma	430
12.5	Lipid-Associated Sialic Acid (LASA) Fractions from Sera of Cancer Patients Contain ENOX2 Fragments as Major Nonlipid Constituents	432
12.6	RTPCR Detection of Cancer Cells in Blood Based on Presence of ENOX2 Splice Variant mRNA.....	433
12.7	Summary	433
	Epilogue—Remaining Challenges	435
Appendix	Detailed Description of Two Dimensional Gel Electrophoresis-Western Blot Early Cancer Detection Protocol	441
	References.....	443
	Index.....	493

ECTO-NOX Proteins

Growth, Cancer, and Aging

Morré, D.J.; Morré, D.M.

2013, XVI, 508 p., Hardcover

ISBN: 978-1-4614-3957-8
