

Contents

- 1 A Short History of Mechanics** 1
 - 1.1 Historical Review 1
 - 1.2 Assignments 25
 - References 25
- 2 Mechanics of Materials** 29
 - 2.1 Introduction 29
 - 2.2 Modern Models 33
 - 2.2.1 Kinetics 34
 - 2.2.2 Boundary Conditions 37
 - 2.2.3 The Stress Tensor 39
 - 2.2.4 Kinematics 41
 - 2.2.5 Material Behavior 42
 - 2.3 Units of Measure 49
 - 2.4 Assignments 54
 - References 57
- 3 Theory of Uniaxial Bars** 59
 - 3.1 Introduction 59
 - 3.2 A Model for Predicting the Mechanical Response of a Uniaxial Bar 61
 - 3.2.1 Construction of the Model 61
 - 3.2.2 Methods for Obtaining Solutions with the Model 64
 - 3.3 Assignments 75
 - References 79
- 4 Theory of Cylindrical Bars Subjected to Torsion** 81
 - 4.1 Introduction 81
 - 4.2 A Model for Predicting the Mechanical Response of a Cylindrical Torsion Bar 83
 - 4.2.1 Construction of the Model 83
 - 4.2.2 Methods for Obtaining Solutions with the Model 87

4.3	Assignments	98
	References	103
5	Theory of Beams	105
5.1	Introduction	105
5.2	A Model for Predicting the Mechanical Response of a Beam	107
5.2.1	Construction of the Model	109
5.2.2	The Beam Model for the Transverse Deflection	114
5.2.3	Calculation of the Moment of Inertia	117
5.2.4	Methods for Obtaining Solutions with the Beam Transverse Deflection Model	121
5.2.5	A Model for Beam Shear	138
5.3	Assignments	141
	References	147
6	Stress and Failure Analysis	149
6.1	Introduction	149
6.2	Modes of Failure in Solids	153
6.2.1	Nonphysical Failure	153
6.2.2	Nonmechanical Physical Failure	154
6.2.3	Mechanically Induced Failure	156
6.2.4	Failure by Fracture and/or Permanent Deformation	157
6.3	Stress Transformations	161
6.3.1	Mohr's Circles for Performing Coordinate Transformations of Stress	165
6.4	A Simple Failure Model for Use with Mohr's Circle	172
6.5	Assignments	176
	References	179
7	Introduction to Structural Design	181
7.1	Introduction	181
7.2	A Procedure for Analyzing Bars Subjected to Combined Loading	188
7.3	The Design Process	197
7.3.1	Design by Controlling Loads	198
7.3.2	Design by Controlling Material Properties	198
7.3.3	Design by Controlling Geometry	199
7.4	Assignments	205
	References	211
	Appendix A – Mechanical Properties of Structural Materials	213
	Author Index	215
	Subject Index	217

Introduction to the Mechanics of Deformable Solids

Bars and Beams

H. Allen, D.

2013, XX, 220 p., Hardcover

ISBN: 978-1-4614-4002-4
