Preface	xi
1 Introduction	1
2 Double Series of Bessel Functions and the Circle and Divisor Problems	7
2.1 Introduction	7
2.2 Proof of Ramanujan's First Bessel Function Identity (Original Form)	15
2.2.1 Identifying the Source of the Poles	16
2.2.2 Large Values of n	17
2.2.3 Small Values of n	19
2.2.4 Further Reductions	22
2.2.5 Refining the Range of Summation	24
2.2.6 Short Exponential Sums	28
2.2.7 Uniform Convergence When x Is Not an Integer	34
2.2.8 The Case That x Is an Integer	38
2.2.9 Estimating $U_2(a, b, T, \eta)$	47
2.2.10 Completion of the Proof of Entry 2.1.1	53
2.3 Proof of Ramanujan's First Bessel Function Identity (Symmetric Form)	57
2.4 Proof of Ramanujan's Second Bessel Function Identity (with the Order of Summation Reversed)	63
2.4.1 Preliminary Results	63
2.4.2 Reformulation of Entry 2.1.2	64
2.4.3 The Convergence of (2.4.3)	66
2.4.4 Reformulation and Proof of Entry 2.1.2	78
2.5 Proof of Ramanujan's Second Bessel Function Identity (Symmetric Form)	86

3	Koshliakov's Formula and Guinand's Formula	93
3.1	Introduction	93
3.2	Preliminary Results	95
3.3	Guinand's Formula	96
3.4	Kindred Formulas on Page 254 of the Lost Notebook	101
4	Theorems Featuring the Gamma Function	111
4.1	Introduction	111
4.2	Three Integrals on Page 199	111
4.3	Proofs of Entries 4.2.1 and 4.2.2	112
4.4	Discussion of Entry 4.2.3	116
4.5	An Asymptotic Expansion of the Gamma Function	117
4.6	An Integral Arising in Stirling's Formula	120
4.7	An Asymptotic Formula for $h(x)$	122
4.8	The Monotonicity of $h(x)$	125
4.9	Pages 214, 215	129
5	Hypergeometric Series	131
5.1	Introduction	131
5.2	Background on Bilateral Series	134
5.3	Proof of Entry 5.1.1	135
5.4	Proof of Entry 5.1.2	136
5.5	Background on Continued Fractions and Orthogonal Polynomials	139
5.6	Background on the Hamburger Moment Problem	141
5.7	The First Proof of Entry 5.1.5	143
5.8	The Second Proof of Entry 5.1.5	144
5.9	Proof of Entry 5.1.2	148
6	Two Partial Manuscripts on Euler's Constant γ	153
6.1	Introduction	153
6.2	Theorems on γ and $\psi(s)$ in the First Manuscript	154
6.3	Integral Representations of $\log x$	158
6.4	A Formula for γ in the Second Manuscript	159
6.5	Numerical Calculations	161
7	Problems in Diophantine Approximation	163
7.1	Introduction	163
7.2	The First Manuscript	164
7.2.1	An Unusual Diophantine Problem	164
7.2.2	The Periodicity of v_m	169
7.3	A Manuscript on the Diophantine Approximation of $e^{2/a}$	175
7.3.1	Ramanujan's Claims	176
7.3.2	Proofs of Ramanujan's Claims on Page 266	177
7.4	The Third Manuscript	179

8	Number Theory	183
8.1	In Anticipation of Sathe and Selberg	183
8.2	Dickman's Function	184
8.3	A Formula for $\zeta(\frac{1}{2})$	191
8.4	Sums of Powers	193
8.5	Euler's Diophantine Equation $a^3 + b^3 = c^3 + d^3$	199
8.6	On the Divisors of $N!$	205
8.7	Sums of Two Squares	206
8.8	A Lattice Point Problem	208
8.9	Mersenne Numbers	209
9	Divisor Sums	213
9.1	Introduction	213
9.2	Ramanujan's Conclusion to [265]	214
9.3	Proofs and Commentary	215
9.4	Two Further Pages on Divisors and Sums of Squares	217
9.5	An Aborted Conclusion to [265]?	219
9.6	An Elementary Manuscript on the Divisor Function $d(n)$	227
9.7	Thoughts on the Dirichlet Divisor Problem	230
10	Identities Related to the Riemann Zeta Function and Periodic Zeta Functions	239
10.1	Introduction	239
10.2	Identities for Series Related to $\zeta(2)$ and $L(1, \chi)$	239
10.3	Analogues of Gauss Sums	243
11	Two Partial Unpublished Manuscripts on Sums Involving Primes	251
11.1	Introduction	251
11.2	Section 1, First Paper	251
11.3	Section 2, First Paper	252
11.4	Section 3, First Paper	253
11.5	Section 4, First Paper	254
11.6	Commentary on the First Paper	255
11.7	Section 1, Second Paper	257
11.8	Section 2, Second Paper	258
11.9	Section 3, Second Paper	259
11.10	Section 4, Second Paper	260
11.11	Section 5, Second Paper	261
11.12	Commentary on the Second Paper	262
12	An Unpublished Manuscript of Ramanujan on Infinite Series Identities	265
12.1	Introduction	265
12.2	Three Formulas Containing Divisor Sums	267

12.3	Ramanujan's Incorrect Partial Fraction Expansion and Ramanujan's Celebrated Formula for $\zeta(2n+1)$	270
12.4	A Correct Partial Fraction Decomposition and Hyperbolic Secant Sums	280
13	A Partial Manuscript on Fourier and Laplace Transforms	285
13.1	Introduction	285
13.2	Fourier and Laplace Transforms	285
13.3	A Transformation Formula	293
13.4	Page 195	303
13.5	Analogues of Entry 13.3.1	304
13.6	Added Note: Pages 193, 194, 250	305
14	Integral Analogues of Theta Functions and Gauss Sums ...	307
14.1	Introduction	307
14.2	Values of Useful Integrals	309
14.3	The Claims in the Manuscript	309
14.4	Page 198	320
14.5	Examples	325
14.6	One Further Integral	327
15	Functional Equations for Products of Mellin Transforms ...	329
15.1	Introduction	329
15.2	Statement of the Main Problem	329
15.3	The Construction of χ_1 and χ_2	334
15.4	The Case in Which $\chi_1(x) = \chi_2(x)$, $\phi(x) = \psi(x)$	339
15.5	Examples	342
16	A Preliminary Version of Ramanujan's Paper	
	"On the Product $\prod_{n=0}^{\infty} \left[1 + \left(\frac{x}{a+nd} \right)^3 \right]$ "	351
16.1	Introduction	351
16.2	An Elegant Product Formula	352
16.3	The Special Case $\alpha = \beta$	353
16.4	An Application of Binet's Formula	353
16.5	A Sum-Integral Identity	354
16.6	The Unpublished Section	355
16.7	Proofs of the Equalities in Sect. 16.6	356
17	A Preliminary Version of Ramanujan's Paper	
	"On the Integral $\int_0^x \frac{\tan^{-1} t}{t} dt$ "	361
17.1	Introduction	361
17.2	Ramanujan's Preliminary Manuscript	361
17.3	Commentary	364

18	A Partial Manuscript Connected with Ramanujan's Paper "Some Definite Integrals"	367
18.1	Introduction	367
18.2	The Partial Manuscript	367
18.3	Discussion and Proofs of the Identities	369
18.4	Page 192	372
18.5	Explicit Evaluations of Certain Quotients of L -Series	373
19	Miscellaneous Results in Analysis	377
19.1	Introduction	377
19.2	Two False Claims	377
19.3	First Attempt: A Possible Connection with Eisenstein Series	378
19.4	Second Attempt: A Formula in Ramanujan's Paper [257]	379
19.5	Third Attempt: The Voronoï Summation Formula	380
19.6	Fourth Attempt: Mellin Transforms	384
19.7	An Integral on Page 197	384
19.8	On the Integral $\int_0^x \frac{\sin u}{u} du$	386
19.9	Two Infinite Products	388
19.10	Two Formulas from the Theory of Elliptic Functions	390
20	Elementary Results	393
20.1	Introduction	393
20.2	Solutions of Certain Systems of Equations	393
20.3	Radicals	399
20.4	More Radicals	403
20.5	Powers of 2	404
20.6	An Elementary Approximation to π	406
21	A Strange, Enigmatic Partial Manuscript	407
21.1	Introduction	407
21.2	A Strange Manuscript	407
	Location Guide	413
	Provenance	419
	References	421
	Index	435

Ramanujan's Lost Notebook

Part IV

Andrews, G.E.; Berndt, B.C.

2013, XVII, 439 p., Hardcover

ISBN: 978-1-4614-4080-2
