

Contents

1	Introduction.....	1
1.1	Prelude	1
1.2	Current Approach to Autism: Emphasizing “Trees” and Losing “The Forest”?	4
1.3	Clinical Neurophenomenological Approach to Autism.....	7
1.3.1	The Three-Dimensional Brain Organization as Conceptual Framework for Neurophenomenological Analysis of Autism.....	9
1.3.2	Bernstein’s Levels and Modern Neuroscience	15
1.3.3	Patterns of Connectivity in the Brain as Widely Distributed Networks	18
2	How Autistic Persons Understand Words (Cerebral Organization of Word Meaning and Autism)	21
2.1	The <i>What</i> System and Its Major Player, BA37	21
2.2	Object Recognition, Topological Scheme of the Object, and Empirical Component of Word Meaning	23
2.2.1	Topological Scheme Is the Base for Object Action	23
2.2.2	Topological Scheme of an Object Is the Basis for Communicative Gestures.....	24
2.2.3	Topological Scheme of an Object Is the Basis for the Empirical Component of Word Meaning	25
2.3	Categorical Classification, Categorical Component of Word Meaning and Left BA37	26
2.4	Word Meaning and the Right BA37.....	29
2.4.1	RH Visual–Situational Level and Word Meaning.....	30
2.4.2	RH Symbolic Level and Word Meaning	30
2.5	Model of Cerebral Organization of Word Meaning.....	32

2.6	Cerebral Organization of Word Meaning and Autism	33
2.6.1	RH Situational Level and Word Meaning in Autism.....	33
2.6.2	Is the Empirical Component of Word Meaning Impaired in Autism?.....	34
2.6.3	Is the Categorical Component of Word Meaning Impaired in Autism?.....	36
2.7	Cerebral Organization of Metaphors and Autism	38
2.7.1	Metaphorical Language of Children with Autism Is of RH Origin	38
2.7.2	Cerebral Organization of Metaphors in the Norm	40
2.7.3	Autistic Children Create Metaphors but do not Understand Them.....	41
2.8	Uniqueness of Right-Hemispheric Prevalence for Language in Autism	43
2.9	Conclusion	45
3	How Autistic Persons Perceive the World (Sensory-Motor Function Level in the Brain and Autism)	47
3.1	Right-Hemispheric Situational Level and Autist's Fear of and Fascination with Moving Objects	47
3.1.1	RH Disorders of Time and Autism	48
3.1.2	STG, Detection of Change and Autism	49
3.1.3	RH Situational Level in Autistic Savant Drawing	51
3.1.4	Preoccupation with Parts of Objects in Autistic Savant Drawing	59
3.2	The Right-Hemispheric Situational Level and Autist's Hypersensitivity/Hyporeactivity to Sensory Stimuli	65
3.3	Right-Hemispheric Situational Level and Autist's Insistence on "Sameness"	67
3.4	Conclusion	68
4	How Autistic Persons Perceive Faces (Cerebral Organization of Face Recognition and Autism).....	69
4.1	Research in Fusiform Face Area and Autism	69
4.2	The FFA, the Distributed Network of Face Processing and Autism	73
4.2.1	Damage to the FFA and Its Left Hemispheric Counterpart.....	73
4.2.2	Are Autistic People Prosopagnostic? Do Children with Developmental Prosopagnosia Become Autistic?	74
4.2.3	Face as Right Hemispheric Gestalt: Face Is Holistic Form	75
4.2.4	Face as RH Gestalt: What Is Familiar Face?	75

4.2.5	Disinhibited Right Hemispheric Processing of Faces	76
4.2.6	Social Knowledge and Sense of Knowing	78
4.2.7	The Left Amygdala Role in Face Processing Network.....	78
4.2.8	The STS Area Role in Face Processing Network	79
4.2.9	The STS and Autists' Lip Reading Versus Eye Tracking	80
4.3	Conclusion	82
5	How Autistic Persons Act in the World (Cerebral Organization of Movements and Autism)	85
5.1	Hierarchical Organization of Movements in the Brain	85
5.1.1	Bernstein's Levels	85
5.1.2	Different Space of Bernstein's Levels Determined by the Intended Action's Meaning	86
5.1.3	Walking as an Example of Bernstein Level's Integration	86
5.1.4	Object Actions and Their Topological Schemes.....	87
5.2	The Making of Automatisms and Pathological Stereotypy	88
5.2.1	Pathological Stereotypy	89
5.2.2	The Drive Behind Stereotypical Behaviors.....	90
5.3	Autist's Nonrhythmical Stereotypical Movements: Role of the Striatum	91
5.4	Autist's Preoccupation with Parts of Objects and Its Underlying Brain Network.....	92
5.5	Autist's "Sameness Behavior" and Its Underlying Brain Network.....	94
5.5.1	Repetitive Behavior in Autism and Compulsions in Obsessive–Compulsive Disorder	95
5.6	Autist's Rhythmical Stereotypical Movements: Role of the Thalamo-pallidum System.....	96
5.7	Conclusion	98
6	How Autistic Persons Perceive Space and Spatial Relations (Where System in the Brain and Autism).....	101
6.1	The Right Parietal-Occipital Region, Topographical Memory, and Autism	101
6.2	The Thalamus, Intrapersonal Space, and Autism	103
6.3	Returning to the Right Parietal-Occipital Region: Thalamo-Parietal System and Integration of <i>I-Space</i> and <i>Non-I-Space</i>	106
6.4	Spatial Representations and "Qualitative" Quantity	109
6.5	The Left Parietal-Occipital Region, Grammatical Constructions in Language and Autism.....	109

6.6	More About the Left Parietal-Occipital Region and Autism: Numbers and Calculation	114
6.7	Numbers for Autistic Individuals Are “Qualitative” Quantities: They Are of Right-Hemispheric Origin	116
6.8	Exceptional Calculating Ability, Autism, and the Right Hemisphere.....	118
6.8.1	Autistic Calculators: How Do They Do It?.....	120
6.8.2	Autistic Calculators: What Are They Doing?	123
6.9	Autistic Calendar Calculators and the Right Hemisphere: “Soul in Numbers” and “Memory Without Consciousness”	124
6.9.1	The Right Inferior Temporal Region (BA37), Autistic People’s Memory, and Autistic Savant’s Calendar Calculation	126
6.9.2	The Right Inferior Parietal Region (BA39 and 40), Archetypal Calendar, and Autistic Savant’s Calendar Calculation.....	128
6.9.3	Contribution of the Right DLPC to Autistic Savant Calendar Calculation	131
6.9.4	Contribution of the Striatum to Autistic Savant Calendar Calculation.....	131
6.9.5	Contribution of the Inner Rhythm to Autistic Savant Calendar Calculation.....	132
6.10	Endnotes.....	134
7	How Autistic Persons Feel (Cerebral Organization of Limbic Emotion and Autism)	137
7.1	The Amygdala and Its Connectivity Pattern	137
7.2	Limbic Emotion: Emotional Experience	140
7.3	Limbic Emotion: Emotional Expression.....	143
7.4	Interhemispheric Differences in Amygdala-Related Emotion.....	145
7.4.1	FMRI Studies of Emotion Recognition by the Left and Right Amygdala.....	147
7.5	Do Autistic People Recognize Emotion?.....	150
7.6	Which Hemisphere Do Autistic People Use to Recognize Emotion?	153
7.7	Do Autistic People Express Emotions?	155
7.7.1	Facial Expression in Autistic Children	155
7.7.2	Prosody in Autistic Children.....	156
7.7.3	Laughter in Autistic Children	158
7.8	Viscero-Motor Expression of Emotion in Autistic People.....	159
7.9	Do Autistic People Feel?	160
7.10	Amygdala—Temporal Cortex Functional Network, Penfield’s “Brain Archive” and Memory of Autistic People.....	162

7.11	The Amygdala, Object Relatedness, and Autism.....	167
7.12	The Orbital Frontal Cortex and Its Connectivity Pattern	169
7.13	Role of the Orbital Frontal Cortex in Human-Specific Emotions and Social Behavior.....	171
7.14	Amygdala–OFC Functional Network and Autism.....	181
7.14.1	Human-Specific Emotions in Autistic People.....	181
7.14.2	The Role of the LH DLPC in Compensation for the Deficient Left Amygdala—Left OFC Network in Autism.....	184
8	Autistic Persons’ Sense of Self (Cerebral Organization of Self and Autism).....	189
8.1	The Left-Hemispheric Self and Autism	190
8.1.1	The Multilevel Model of the LH Self	190
8.1.2	Homeostatic System and Its Relation to the LH Self.....	191
8.1.3	The LH Self in Autism.....	194
8.2	The Right-Hemispheric Self and Autism.....	198
8.2.1	The Multilevel Model of the RH Self	198
8.2.2	The RH Self in Autism.....	203
8.3	Autist: Who Is He—Introverted Extravert or Extraverted Introvert?.....	207
8.4	Autist: Who Is He—Original Imitator or Imitating Original?.....	214
8.5	Endnotes.....	215
9	The Left-Hemispheric Self in Autism Revisited	217
9.1	Phenomenological–Historical Approach to Autism and the Meaning of “I”	218
9.2	Experience of <i>Acting</i> , Its Brain Basis, and Autism.....	219
9.3	Experience of <i>Having</i> , Its Brain Basis, and Autism.....	222
9.4	Comparison of Brain Networks Involved in <i>Acting</i> and <i>Having</i> and Its Implication for Autism	227
9.5	Autism—Strange Existence	228
10	Pieces of Autism’s Puzzle Fall into Place (Clinical-Brain Pattern of Autism)	233
10.1	The Primary (Fundamental) Deficit: Necessary and Sufficient	233
10.2	The Prevalence of the Right-Hemispheric Situational (Sensory-Motor) Level in Autism as a Direct Consequence of the Primary Deficit	234
10.3	Stereotypical Behavior in Autism and Its Relation to the Autist’s Self.....	236

10.3.1	The Thalamic Level: Subjectively Felt Body (<i>I-Space</i>).....	236
10.3.2	The Sensory-Motor Level: Subjectively Felt Reality (<i>Non-I-Space</i>)	237
10.3.3	Subjectively Felt <i>Non-I-Space</i> Combined with the Integrated <i>I-Space/Non-I-Space</i>	237
10.4	Pattern Recognition in Autism and the Myth of Weak Central Coherence.....	240
10.5	Pathological Disinhibition of the Striatum and Stereotypical Behavior in Autism.....	241
10.6	Autism Clinical-Brain Pattern.....	241
10.7	Beyond Autism Clinical-Brain Pattern: Role of the Left Dorso-Lateral Prefrontal Cortex—Striatum Network in Autism.....	244
10.8	Individual Variability Within Autism Clinical-Brain Pattern	246
10.9	Autism Boundaries from the Point of View of Brain Networks	256
10.9.1	Categorical Versus Dimensional Approach to Autism.....	257
10.9.2	Comorbidity in Autism and Overlapping Brain Networks	259
10.9.3	RH Prevalence in Nonautistic People	261
10.10	Schizoid Personality and Autism	264
10.11	Creativity and Autism	269
10.11.1	Definition of Creativity	269
10.11.2	Creativity and RH/LH Interaction.....	271
10.11.3	How Creative Process is Experienced by the Artist.....	272
10.11.4	Neurophenomenology of Creativity: Role of the Thalamic Level and RH Symbolic System	274
10.11.5	Miracle of Autistic Savant Talent and Myth of Autistic Creativity	276

Autism and the Brain

Neurophenomenological Interpretation

Glezerman, T.B.

2013, XVI, 304 p., Hardcover

ISBN: 978-1-4614-4111-3
