

# Contents

- 1 Introduction . . . . . 1**
  - 1.1 Perspective . . . . . 1
  - 1.2 WMN Architecture, Characteristics and Benefits . . . . . 3
  - 1.3 Experimental Testbeds, Real-World Deployments . . . . . 5
  - 1.4 Overview . . . . . 7
  - References . . . . . 7
- 2 Mesh Enabling Technology. . . . . 11**
  - 2.1 IEEE 802.11 and Its Amendments . . . . . 11
  - 2.2 Multiple Input Multiple Output (MIMO)  
Based IEEE 802.11 . . . . . 12
    - 2.2.1 Spatial Diversity . . . . . 14
    - 2.2.2 Spatial-Division Multiplexing . . . . . 18
  - 2.3 Multihop Cellular Networks (MCN). . . . . 20
    - 2.3.1 IEEE 802.16: WiMAX. . . . . 20
    - 2.3.2 3GPP LTE-Advanced Relaying . . . . . 27
  - 2.4 Cognitive Radio Networks . . . . . 28
    - 2.4.1 Cognitive Mesh Networks . . . . . 28
    - 2.4.2 IEEE 802.22 . . . . . 30
    - 2.4.3 TV White Spaces . . . . . 30
  - References . . . . . 33
- 3 Mesh Design: Lower Layer Issues . . . . . 37**
  - 3.1 WMN Design Challenges . . . . . 37
  - 3.2 Measuring and Modeling the Effects of Interference . . . . . 39
    - 3.2.1 Directional Antennas . . . . . 43
    - 3.2.2 Utilizing Measurements for Modeling . . . . . 45

3.3	Power Control . . . . .	48
3.3.1	Power Control and Topology Control . . . . .	48
3.3.2	Static Power Control . . . . .	49
3.3.3	Dynamic Power Control . . . . .	60
3.4	Topology Control . . . . .	62
3.4.1	Graph Planarity . . . . .	64
3.5	Scheduling . . . . .	66
3.5.1	TDMA-Based Link Scheduling Protocols . . . . .	67
3.5.2	CSMA-CA Based Scheduling Protocols . . . . .	73
3.5.3	Other Scheduling Protocols . . . . .	74
3.5.4	802.11s MAC . . . . .	75
3.6	Channel/Radio Assignment . . . . .	78
3.6.1	Static Channel Assignment . . . . .	78
3.6.2	Dynamic Channel Assignment . . . . .	81
3.6.3	Hybrid Channel Assignment . . . . .	83
	References . . . . .	84
<b>4</b>	<b>Mesh Design: Network Issues . . . . .</b>	<b>95</b>
4.1	Network-Level Design Challenges . . . . .	95
4.2	Routing . . . . .	95
4.2.1	Routing Metrics for Wireless Mesh Networks . . . . .	96
4.2.2	Traditional MANET-Like Routing Protocols . . . . .	100
4.2.3	Opportunistic Routing Protocols . . . . .	102
4.2.4	Multi-Path Routing and Load Balancing . . . . .	103
4.2.5	Geographic Routing . . . . .	104
4.2.6	Hierarchical Routing and Clustering . . . . .	105
4.2.7	Multi-Radio/Channel Routing . . . . .	105
4.2.8	Multicasting Protocols . . . . .	106
4.2.9	Broadcast Routing Protocols . . . . .	107
4.3	Network Planning and Deployment . . . . .	107
4.4	Capacity and Performance Modeling . . . . .	109
4.5	Rate Control . . . . .	110
4.5.1	TCP for Congestion Control . . . . .	110
4.5.2	Addressing Inherent Spatial Bias in WMNs . . . . .	114
4.6	Cognitive Mesh Issues: Spectrum Sensing and Access . . . . .	116
4.6.1	Standalone Sensing . . . . .	118
4.6.2	Cooperative Sensing . . . . .	119
4.6.3	Spectrum Sensing in Mesh Networks . . . . .	121
4.6.4	Medium Access . . . . .	122
	References . . . . .	123
<b>5</b>	<b>Joint Design . . . . .</b>	<b>133</b>
5.1	Joint Design . . . . .	133
5.2	Power Control and Scheduling . . . . .	133

5.3	Routing and Scheduling . . . . .	135
5.4	Power/Topology Control and Routing. . . . .	137
5.5	Routing and Channel Assignment . . . . .	137
5.6	Scheduling and Channel Assignment . . . . .	138
5.7	Routing, Scheduling and Channel Assignment. . . . .	138
5.8	Routing, Scheduling and Power Control . . . . .	140
5.9	Designing Using Sustainable Energy . . . . .	141
5.9.1	Understanding and Modeling Energy Availability . . . .	142
5.9.2	Design and Deployment of Renewable Energy Mesh. . . . .	146
5.10	Back-Pressure: A Framework for Maximizing Network Utility . . . . .	147
5.10.1	Using CSMA/CA in Back-Pressure Framework. . . . .	150
5.10.2	Joint Routing, Scheduling and Rate Control Using Back-Pressure Framework. . . . .	157
5.11	Cognitive Mesh Networks. . . . .	160
5.11.1	Routing . . . . .	160
5.11.2	Congestion Control . . . . .	161
	References . . . . .	162
<b>6</b>	<b>Survivability of Mesh Networks . . . . .</b>	<b>169</b>
6.1	A Primer on Network Survivability . . . . .	169
6.1.1	Survivability Measures. . . . .	171
6.1.2	Random Graphs. . . . .	177
6.2	Topological Resilience of Wireless Mesh Networks. . . . .	179
6.2.1	Component Failures. . . . .	179
6.2.2	Topological Resilience. . . . .	181
6.3	Availability . . . . .	183
6.3.1	802.11s Mesh Network. . . . .	186
6.3.2	Approximating Mesh Availability . . . . .	188
6.3.3	Constrained Monte Carlo Simulation Approach to KCA . . . . .	190
6.4	Performability . . . . .	198
6.4.1	Throughput Performance of Mesh Networks. . . . .	200
6.4.2	K-Center Performability . . . . .	201
6.5	Designing for Availability and Performability . . . . .	206
6.5.1	Open Research Problems . . . . .	207
6.6	Conclusion . . . . .	211
	References . . . . .	212
	<b>Index . . . . .</b>	<b>215</b>

Designing for Network and Service Continuity in  
Wireless Mesh Networks

Pathak, P.H.; Dutta, R.

2013, XIV, 222 p., Hardcover

ISBN: 978-1-4614-4626-2
