## Part I Preliminaries

<b>1</b>	<b>The Birth of a New Science</b>	<b>3</b>
	From Divine Reign to Brain	3
	Ancient Egypt	3
	Ancient China	4
	Ancient Greece and Rome	5
	Plato (420–347)	6
	Aristotle (384–322 B.C.)	7
	Hippocrates (460–380 B.C.)	8
	Galen (130–201 A.D.)	9
	Change Comes from Evidence and Discovery	10
	Andreas Vesalius (1514–1564)	10
	Rene Descartes (1596–1650)	11
	The New Electricity in the Eighteenth Century	12
	Luigi Galvani (1729–1798)	12
	Johannes Peter Muller (1801–1858)	13
	The Great Neuroscience Debate: Localization, Holism, and Their Combinations	14
	Champion for Localization of Structures to Functions: Franz Joseph Gall (1758–1828)	14
	Equipotentiality and Holism of Jean Pierre Flourens (1795–1867)	
	Challenges Phrenology	15
	A More Sophisticated Conception of Localization	16
	The Integrative Approaches of Hughlings Jackson and Alexander Luria	19
	Modern Models: The Neuron Doctrine Versus the Reticular Theory	20

	The Discovery of Neurotransmitters . . . . .	22
	Conclusion: We Enter the Modern Age of Neuroscience . . . . .	24
<b>2</b>	<b>Unlocking the Key to Neuroscience Terminology . . . . .</b>	<b>25</b>
	Viewing the Different Brain Maps . . . . .	25
	Exterior Perspectives . . . . .	26
	Interior Perspectives. . . . .	27
	Brodmann Areas . . . . .	28
	Terminology for Parts of the Brain . . . . .	29
	Gyri and Sulci. . . . .	29
	White Matter and Gray Matter . . . . .	30
	Conclusion . . . . .	31
<b>3</b>	<b>What is the Mind and Brain? . . . . .</b>	<b>33</b>
	Theory of Mind . . . . .	34
	Cortical Midline Structures and the Sense of Self . . . . .	34
	Consciousness and the Brain . . . . .	35
	Physicalism . . . . .	36
	The Mind is the Brain . . . . .	36
	Beyond Identity: Eliminative Materialism. . . . .	37
	Functionalism . . . . .	38
	Mind Only Theory . . . . .	39
	Balancing Mind and Brain in Treatment . . . . .	40
	Conclusion: An Integration of Mind and Brain . . . . .	41
 <b>Part II Neuroscience Methods and Technologies</b>		
<b>4</b>	<b>Learning from Brain Damaged Individuals . . . . .</b>	<b>45</b>
	The Case of Phineas Gage . . . . .	45
	H. M. and New Understanding of Memory . . . . .	46
	Split-Brain Patients . . . . .	47
	Functions of Brain Hemisphere Interpreters . . . . .	49
	Hemisphere Preference. . . . .	49
	When One Function is Lost. . . . .	49
	What Neuroscience Tells Us About the Conscious and Unconscious Mind . . . . .	51
	Conclusion . . . . .	52
<b>5</b>	<b>Neuroimaging Technologies . . . . .</b>	<b>53</b>
	The First Look: Staining Techniques . . . . .	53
	From Early X-Rays to CAT and CT Technologies. . . . .	54

PET . . . . .	55
MRI and fMRI . . . . .	56
fMRI . . . . .	58
EEG . . . . .	59
ERPs . . . . .	60
Other Visualization Methods . . . . .	61
Conclusion . . . . .	62
<b>6 Modeling the Brain . . . . .</b>	<b>63</b>
General Approaches to Modeling . . . . .	63
Top-Down and Bottom-Up Models . . . . .	63
Mathematical Modeling Defined . . . . .	64
Bayesian Inference: Estimating the Likelihood of Our Models . . . . .	65
Our Stochastic Being: Estimating What Comes Next . . . . .	67
Self-Regulation: Finding the Optimal Path . . . . .	68
The Bellman Equation and Dynamic Programming . . . . .	69
Stochastic Optimal Control . . . . .	70
Computational Programs for Modeling the Brain . . . . .	70
Connectionist Model . . . . .	71
Tensor Theory . . . . .	71
Dynamical Systems Theory . . . . .	72
Conclusion: Looking to the Future . . . . .	73
<b>Part III Neurobiology from the Single Neuron to Complex Networks</b>	
<b>7 Neurons and Neurotransmitters . . . . .</b>	<b>77</b>
The Impulse for Action Begins in the Neurons . . . . .	77
The Role of Each Neuron Part: Dendrite, Cell Body, Axon, and Synapse . . . . .	78
Different Kinds of Neurons . . . . .	80
Glia Cells . . . . .	80
How Neurons Communicate . . . . .	82
The Sodium–Potassium Pump Helps Move the Ions . . . . .	82
Forces that Alter Electrical Balance . . . . .	82
The Source of Communication: The Action Potential . . . . .	83
From Electrical to Chemical Communication Between Neurons . . . . .	84
Neurotransmitters Carry the Messages . . . . .	84
Other Chemical Messengers . . . . .	84
Neurotransmitters . . . . .	85
Different Types of Neurotransmitters . . . . .	85
Conclusion . . . . .	91

<b>8</b>	<b>Brain Structures</b>	93
	Holism and Localization	93
	Lower Brain System	94
	The Cerebellum	94
	Bassal Ganglia System	95
	The Limbic System	96
	Amygdala	97
	Hippocampus	98
	Thalamus	98
	Hypothalamus	99
	The Insula	99
	The Fornix	100
	The Cerebral Cortex	100
	The Frontal Lobes	101
	The Parietal Lobes	103
	The Temporal Lobes	103
	The Occipital Lobes	105
	Conclusion	105
<b>9</b>	<b>Brain Pathways</b>	107
	The Nervous System	107
	Central Nervous System and Peripheral Nervous System	107
	Cranial Nerves	108
	Spinal Nerves	109
	Support System Through the Ventricles	109
	Autonomic Nervous System	110
	Regulatory Pathways	111
	Sensory Processing	112
	The Pain Pathway	113
	The Reward Pathway and the Experience of Pleasure	114
	The Fear and Stress (HPA-Axis) Pathway	115
	Biological Rhythms	117
	Brain Areas Involved in the Circadian System	117
	Are our Circadian Rhythm Internal or External?	118
	Sleep–Wake Cycle	119
	REM Sleep and Memory Consolidation	120
	Conclusion	121
<b>10</b>	<b>Neural Networks: How Neurons Think and Learn</b>	123
	Neurons Interact in Networks	123
	What is a Neural Network?	124
	The Forming of Neural Nets	124

Early Development. . . . .	125
Evolution of Neural Network Theories. . . . .	125
Problems and their Solutions. . . . .	126
From Biological Neurons to Artificial Neuronal Units . . . . .	128
Connections Between Units . . . . .	129
Activation Rules: The Threshold . . . . .	129
Other Activation Concepts . . . . .	130
Multi-Layered Neural Networks . . . . .	131
Feedforward and Feedback Systems. . . . .	131
Models of Learning . . . . .	133
Back Propagation . . . . .	133
Hebbian Learning Rule . . . . .	133
Types of Learning . . . . .	134
Applications of Neural Networks . . . . .	135
Psychotherapy, Brain, Character, and Varied Treatment	
Modalities. . . . .	135
Neural Networks for Alcoholism . . . . .	136
Depression and Learned Helplessness . . . . .	136
Memory and Stress . . . . .	137
Conclusion . . . . .	137

## **Part IV How the Brain Changes Through Time**

<b>11 Evolution of the Brain Over Eons of Time . . . . .</b>	<b>141</b>
Top-Down Approach to the Brain . . . . .	141
Three Evolutionary Methods . . . . .	142
Single Ancestor Assumption . . . . .	143
Intelligent Design Versus Self-Organizing Systems . . . . .	144
Self-Organizing Systems. . . . .	146
How Self-Organizing Systems Evolved Through Time. . . . .	146
The Crown of Evolution: The Isocortex (Neocortex) . . . . .	149
Conclusion . . . . .	150
<b>12 Brain Development Through the Life Span . . . . .</b>	<b>151</b>
The Stages of Brain Development, from Conception to Infancy. . . . .	151
Phase 1: From Conception to Neural Induction . . . . .	152
Phase 2: Proliferation. . . . .	153
Phase 3: Migration. . . . .	154
Phase 4: Differentiation . . . . .	154
Phase 5: Synaptogenesis. . . . .	155
Phase 6: Cell Death and Cell Life Lead to Stabilization. . . . .	155
Phase 7: Synaptic Rearrangement . . . . .	156
The Interplay of Genetics and Experience in Development . . . . .	157
Critical and Sensitive Periods . . . . .	157

Critical and Sensitive Periods in Childhood . . . . .	158
Critical Period for Primary Interpersonal Relationships . . . . .	159
Adolescence and Refining of the Brain. . . . .	159
The Aging Brain . . . . .	161
Cognitive Changes. . . . .	161
Brain Changes. . . . .	162
Disorders of Aging . . . . .	162
Conclusions. . . . .	164
<b>13 Neuroplasticity and Neurogenesis: Changing</b>	
<b>Moment-by-Moment.</b> . . . .	165
How Neuroplasticity is Studied . . . . .	166
The Microscopic View of Neuroplasticity. . . . .	166
History of the Discovery. . . . .	168
Early Development . . . . .	168
Putting on the Brakes. . . . .	169
Plasticity After Damage . . . . .	170
Plasticity from Enrichment . . . . .	171
Neuroplasticity in the Human Brain. . . . .	172
Remapping . . . . .	172
Novelty as a Stimulus for Neurogenesis. . . . .	173
Conclusion . . . . .	174
<b>Part V Enhancing Brain Functions for Treatment</b>	
<b>14 Principles for Incorporating the Brain into Treatments</b> . . . . .	177
Recognizing the Healing Tendency . . . . .	177
Working in Multi-dimensions . . . . .	178
Activating Neuroplasticity. . . . .	179
Using What's There . . . . .	179
Enhancing Healing. . . . .	181
Eliciting Change . . . . .	182
Conclusion . . . . .	183
<b>15 Working with Attention</b> . . . . .	185
Neuroscience Models of Attention . . . . .	186
Arousal: A Key to Attention . . . . .	186
The Process of Attention. . . . .	186
Attention Occurs Bottom-Up and Top-Down. . . . .	187
Brain Areas Involved . . . . .	187
Unconscious Attention . . . . .	188
How Do We Attend Unconsciously? . . . . .	189

Working with Conscious and Unconscious Attention	
Therapeutically . . . . .	190
Developing Attentional Skills Consciously . . . . .	190
Narrowing Attention . . . . .	191
Selective Attention. . . . .	191
Focusing Attention. . . . .	192
Training Attention to be Flexible and Open . . . . .	193
Opening Attention . . . . .	194
Working with Free-Flowing Attention . . . . .	194
Ways to Work with Unconscious Attention Therapeutically . . . . .	195
Incorporating Hypnosis. . . . .	195
Begin by Exploring Unconscious Attention. . . . .	195
Exploring Peripheral Associations . . . . .	196
Learning Self-Hypnosis . . . . .	196
Entering Self-Hypnosis. . . . .	197
Allowing Unconscious Attention in Hypnosis . . . . .	197
Coming Out of Hypnosis . . . . .	198
Ratification of Hypnosis. . . . .	198
Conclusion . . . . .	199
<b>16 Regulating Emotions. . . . .</b>	<b>201</b>
Evolutionary Development of Emotions . . . . .	202
Emotions are Embodied . . . . .	202
Components of Emotional Experience . . . . .	203
How Emotions are Evoked . . . . .	203
Timing of Emotional Reactions through the Short Path and the Long Path . . . . .	204
Emotion Areas in the Brain. . . . .	206
Amygdala. . . . .	206
The Insula . . . . .	207
Cingulate Gyrus . . . . .	208
Patterns of Emotions . . . . .	209
Working with Emotions . . . . .	209
Working with Interoception Sensing. . . . .	210
Begin with Breathing. . . . .	210
Follow Internal Sensations . . . . .	211
Attending to the Motor Response in Emotion:	
Tension and Relaxation . . . . .	211
Begin with Awareness . . . . .	211
Easing Tensions . . . . .	212
Noticing Emotional Sensory and Motor Responses in Different Situations . . . . .	212

Thinking About Emotions . . . . .	213
Recognizing Emotions . . . . .	213
Recognizing Early Warning Signs . . . . .	214
Accepting Emotions Mindfully . . . . .	214
Taking a Non-Judgmental Attitude . . . . .	215
Fostering Mindful Acceptance . . . . .	215
Mindful of Emotions . . . . .	216
Beyond Cognition . . . . .	217
Conclusion . . . . .	218
<b>17 Reconsolidating Memory . . . . .</b>	<b>219</b>
Introduction . . . . .	219
Basic Forms of Memory: Declarative and Non-Declarative . . . . .	219
The Microscopic Picture of Memory and Learning . . . . .	220
The Big Picture of Memory and Learning Processes . . . . .	221
Long-Term Memory Areas in Declarative Memory . . . . .	222
Long-Term Memory Areas in Non-Declarative Memory . . . . .	223
Reconsolidating: Updating Unconsciously . . . . .	225
Direct Suggestion Experiment . . . . .	226
Indirect Suggestion Experiment . . . . .	226
Reconsolidation of Declarative Memories . . . . .	226
Working with Non-Declarative (Implicit) Memory: Priming and Seeding . . . . .	228
Changing Memories Indirectly . . . . .	230
Positive Forgetting . . . . .	230
Remembering and Forgetting . . . . .	231
Building Tolerance and Acceptance . . . . .	231
Conclusion . . . . .	232
<b>18 Maximizing the Social Brain . . . . .</b>	<b>233</b>
Hard-Wired for Relationships . . . . .	233
Recognizing Faces . . . . .	233
Responding to Language . . . . .	234
Keyed to the Environment . . . . .	235
The Polyvagal Theory . . . . .	235
Reading the Signs of Problems . . . . .	236
Rewiring Attachment Networks . . . . .	237
Developing the Ability to Relax . . . . .	238
Experiencing Attachment Styles Bottom-Up . . . . .	239
Fostering Loving Connections . . . . .	241
The Mirror Neuron System . . . . .	241
How Mirror Neurons Were Discovered: Monkey Studies . . . . .	242
Human Mirror Neuron Systems . . . . .	243

Mirror Neurons Respond to Intention. . . . .	245
From Embodied Cognition to Social Understanding. . . . .	246
Empathy and Emotions . . . . .	246
Mirror Neurons and Language. . . . .	247
Autism as a Deficit in Mirror Neuron Firing. . . . .	248
Encouraging Mirror Neurons to Fire . . . . .	249
Shared Intention: Meditating as a Couple or a Family . . . . .	250
Conclusion: Implications for Treatments. . . . .	250

## **Part VI Shifting the Nervous System in Common Disorders**

<b>19 How Psychotherapy Changes the Brain. . . . .</b>	<b>253</b>
Cognitive Therapies (CBT and RET) . . . . .	253
Increase of Gray Matter . . . . .	254
Balancing the Limbic System with Frontal Lobes . . . . .	255
CBT Alters the Basal Ganglia in OCD. . . . .	255
Behavior Therapy (BT). . . . .	256
Associative Pairing . . . . .	256
The Neuroscience of Reward . . . . .	258
Psychodynamic/Psychobiological Approaches . . . . .	259
The Importance of the Unconscious. . . . .	260
Id Impulses. . . . .	260
Early Formative Relationships. . . . .	261
Love in the Brain . . . . .	262
Defenses. . . . .	263
Meditation. . . . .	264
Meditation Brings Relaxation . . . . .	265
The Dual Effect: Relaxation and Activation . . . . .	266
Brain Coherence: More Brain Involved . . . . .	267
Hypnosis. . . . .	267
Recent Definitions from Neuroscience . . . . .	268
Dissociation and Decreased Brain Coherence . . . . .	269
Hypnotic Trance and Suggestion . . . . .	270
Other Brain Activations . . . . .	271
Conclusion . . . . .	271
<b>20 Relieving Anxiety . . . . .</b>	<b>273</b>
An Overview of How Anxiety Changes the Nervous System . . . . .	274
The Role of Fear and Stress in Anxiety Disorders. . . . .	274
How the Neurotransmitters Balance Changes . . . . .	274
Neuroplasticity in the Stress System: You can Alter the Brain's Stress Reaction. . . . .	275
Limbic System Involvement in Anxiety . . . . .	275

The Short Path and the Long Path for Emotions and Stress . . . . .	276
Using the Short and Long Path in Treatment . . . . .	277
Calming the System. . . . .	277
Returning to Balance . . . . .	278
Specific Fears . . . . .	278
Embracing Fear to Overcome It . . . . .	279
PTSD . . . . .	280
The Role of the Hippocampus in PTSD . . . . .	281
Working with PTSD . . . . .	282
OCD . . . . .	284
Treatments for OCD . . . . .	284
Panic Disorder. . . . .	287
Deconstruction Meditation for Anxiety. . . . .	287
Conclusion . . . . .	288
 <b>21 Finding a Better Balance for Depression</b>	
<b>and Bipolar Disorder . . . . .</b>	<b>289</b>
The Depressed Brain . . . . .	289
Neurotransmitters and Depression . . . . .	291
Effects of Treatments. . . . .	292
The Bipolar Brain . . . . .	293
How Treatments Change the Brain. . . . .	294
A Comprehensive Three-Component Treatment of Depression:	
Brain, Mind, and Social . . . . .	295
Rebalancing the Nervous System. . . . .	296
Cognitive Change: Shifting From Inner Rumination	
to Mindful Awareness . . . . .	298
Enhancing Relationships with Shared Meditation. . . . .	303
Conclusion . . . . .	304
 <b>22 Recovering from Addiction . . . . .</b>	<b>305</b>
A Universal, Non-Specific Mind–Brain Change in Addiction:	
A Compromised Reward Pathway . . . . .	305
Treatments for Substance Abuse: Restoring Normal Functioning. . . .	308
Activating the Unconscious to Balance the Reward System . . . .	308
Inducing Relaxation Unconsciously . . . . .	309
Deepening the Experience with Hypnosis. . . . .	310
Hypnotic Calm Through a Memory . . . . .	310
Apply a 4-Step Method for Changing Negative	
Self-Suggestions . . . . .	310
Trusting Intelligent Non-Conscious Brain Pathways	
for Change . . . . .	312
Associations and Imaginings of the Future . . . . .	313

The Power of the Breath. . . . .	313
Opening Intuition Through Mindful Breathing . . . . .	314
Disengaging from Craving Mindfully Through	
Non-Attachment . . . . .	315
Differentiating the Features of Cravings . . . . .	315
Make Small Changes: Harm Reduction . . . . .	316
Maintain Non-Attachment. . . . .	316
Choosing Renunciation. . . . .	316
Working Through . . . . .	317
Meditation on Your Dynamic, Ever-Changing Being . . . . .	317
Nurturing the Positive: Seek Healthy Rewards . . . . .	318
Conclusion . . . . .	318
<b>References . . . . .</b>	<b>319</b>
<b>Index . . . . .</b>	<b>341</b>

Neuroscience for Clinicians

Evidence, Models, and Practice
