1	Main Directions in the Theory of Probability Metrics	1
1.1	Introduction	1
1.2	Method of Metric Distances and Theory of Probability Metrics...	1
1.3	Probability Metrics Defined	2
1.4	Main Directions in the Theory of Probability Metrics.....	3
1.5	Overview of the Book	4

Part I General Topics in the Theory of Probability Metrics

2	Probability Distances and Probability Metrics: Definitions	11
2.1	Introduction	12
2.2	Examples of Metrics in Probability Theory	13
2.3	Kolmogorov Metric: A Property and an Application	15
2.4	Metric and Semimetric Spaces, Distance, and Semidistance Spaces.....	19
2.5	Definitions of Probability Distance and Probability Metric	22
2.6	Universally Measurable Separable Metric Spaces	24
2.7	Equivalence of the Notions of Probability (Semi-) distance on \mathcal{P}_2 and on \mathfrak{X}	28
	References	31
3	Primary, Simple, and Compound Probability Distances and Minimal and Maximal Distances and Norms	33
3.1	Introduction	34
3.2	Primary Distances and Primary Metrics.....	34
3.3	Simple Distances and Metrics: Cominimal Functionals and Minimal Norms	39
3.4	Compound Distances and Moment Functions	53
	References	66
4	A Structural Classification of Probability Distances	67
4.1	Introduction	68

4.2	Hausdorff Structure of Probability Semidistances	69
4.3	Λ -Structure of Probability Semidistances	85
4.4	ζ -Structure of Probability Semidistances	88
	References	103

Part II Relations Between Compound, Simple, and Primary Distances

5	Monge–Kantorovich Mass Transference Problem, Minimal Distances and Minimal Norms	109
5.1	Introduction	109
5.2	Statement of Monge–Kantorovich Problem	111
5.3	Multidimensional Kantorovich Theorem	121
5.4	Dual Representation of Minimal Norms μ_c° : Generalization of Kantorovich–Rubinstein Theorem	130
5.5	Application: Explicit Representations for a Class of Minimal Norms	138
	References	141
6	Quantitative Relationships Between Minimal Distances and Minimal Norms	145
6.1	Introduction	145
6.2	Equivalence Between Kantorovich Metric and Kantorovich–Rubinstein Norm	146
6.3	Inequalities Between $\hat{\mu}_c$ and μ_c°	148
6.4	Convergence, Compactness, and Completeness in $(\mathcal{P}(U), \hat{\mu}_c)$ and $(\mathcal{P}(U), \mu_c^\circ)$	157
6.5	μ_c° - and $\hat{\mu}_c$ -Uniformity	161
6.6	Generalized Kantorovich and Kantorovich–Rubinstein Functionals	164
	References	167
7	K-Minimal Metrics	169
7.1	Introduction	170
7.2	Definition and General Properties	170
7.3	Two Examples of K -Minimal Metrics	175
7.4	K -Minimal Metrics of Given Probability Metrics: The Case of $U = R$	177
7.5	The Case Where U Is a Separable Metric Space	185
7.6	Relations Between Multidimensional Kantorovich and Strassen Theorems: Convergence of Minimal Metrics and Minimal Distances	192
	References	197

8	Relations Between Minimal and Maximal Distances	199
8.1	Introduction	199
8.2	Duality Theorems and Explicit Representations for $\check{\mu}_c$ and $\mu_c^{(s)}$	200
8.3	Convergence of Measures with Respect to Minimal Distances and Minimal Norms	207
	Reference	217
9	Moment Problems Related to the Theory of Probability	
	Metrics: Relations Between Compound and Primary Distances	219
9.1	Introduction	219
9.2	Primary Minimal Distances: Moment Problems with One Fixed Pair of Marginal Moments	220
9.3	Moment Problems with Two Fixed Pairs of Marginal Moments and with Fixed Linear Combination of Moments	226
	References	233
Part III Applications of Minimal Probability Distances		
10	Moment Distances	237
10.1	Introduction	237
10.2	Criteria for Convergence to a Distribution with an Analytic Characteristic Function	238
10.3	Moment Metrics	255
10.3.1	Estimates of λ by Means of d_∞	257
10.3.2	Estimates of λ by Means of d_α , $\alpha \in (0, \infty)$	266
10.3.3	Estimates of d_α by Means of Characteristic Functions ..	267
	References	270
11	Uniformity in Weak and Vague Convergence	271
11.1	Introduction	271
11.2	ζ -Metrics and Uniformity Classes	272
11.3	Metrization of the Vague Convergence	279
	References	282
12	Glivenko–Cantelli Theorem and Bernstein–Kantorovich	
	Invariance Principle	283
12.1	Introduction	283
12.2	Fortet–Mourier, Varadarajan, and Wellner Theorems	284
12.3	Functional Central Limit and Bernstein–Kantorovich Invariance Principle	291
	References	296
13	Stability of Queueing Systems	297
13.1	Introduction	297
13.2	Stability of $G G 1 \infty$ -Systems	298

13.3	Stability of $GI GI 1 _\infty$ -System	301
13.4	Approximation of a Random Queue by Means of Deterministic Queueing Models	305
	References	315
14	Optimal Quality Usage	317
14.1	Introduction	317
14.2	Optimality of Quality Usage and the Monge–Kantorovich Problem	318
14.3	Estimates of Minimal Total Losses $\tau_\phi(\phi^*)$	325
	References	331
 Part IV Ideal Metrics		
15	Ideal Metrics with Respect to Summation Scheme for i.i.d. Random Variables	335
15.1	Introduction	336
15.2	Robustness of χ^2 Test of Exponentiality	336
15.3	Ideal Metrics for Sums of Independent Random Variables	343
15.4	Rates of Convergence in the CLT in Terms of Metrics with Uniform Structure	353
	References	361
16	Ideal Metrics and Rate of Convergence in the CLT for Random Motions	363
16.1	Introduction	363
16.2	Ideal Metrics in the Space of Random Motions	364
16.3	Rates of Convergence in the Integral and Local CLTs for Random Motions	368
	References	378
17	Applications of Ideal Metrics for Sums of i.i.d. Random Variables to the Problems of Stability and Approximation in Risk Theory	379
17.1	Introduction	379
17.2	Problem of Stability in Risk Theory	379
17.3	Problem of Continuity	381
17.4	Stability of Input Characteristics	388
	References	393
18	How Close Are the Individual and Collective Models in Risk Theory?	395
18.1	Introduction	395
18.2	Stop-Loss Distances as Measures of Closeness Between Individual and Collective Models	396
18.3	Approximation by Compound Poisson Distributions	410
	References	419

19	Ideal Metric with Respect to Maxima Scheme of i.i.d. Random Elements	421
19.1	Introduction	422
19.2	Rate of Convergence of Maxima of Random Vectors Via Ideal Metrics	422
19.3	Ideal Metrics for the Problem of Rate of Convergence to Max-Stable Processes	438
19.4	Double Ideal Metrics	463
	References	477
20	Ideal Metrics and Stability of Characterizations of Probability Distributions	479
20.1	Introduction	479
20.2	Characterization of an Exponential Class of Distributions $\{F_p, 0 < p \leq \infty\}$ and Its Stability	482
20.3	Stability in de Finetti's Theorem	494
20.4	Characterization and Stability of Environmental Processes	500
	References	515
 Part V Euclidean-Like Distances and Their Applications		
21	Positive and Negative Definite Kernels and Their Properties	519
21.1	Introduction	519
21.2	Definitions of Positive Definite Kernels	520
21.3	Examples of Positive Definite Kernels	524
21.4	Positive Definite Functions	527
21.5	Negative Definite Kernels	528
21.6	Coarse Embeddings of Metric Spaces into Hilbert Space	532
21.7	Strictly and Strongly Positive and Negative Definite Kernels	533
	References	537
22	Negative Definite Kernels and Metrics: Recovering Measures from Potentials	539
22.1	Introduction	540
22.2	\mathfrak{N} -Metrics in the Set of Probability Measures	540
22.2.1	A Class of Positive Definite Kernels in the Set of Probabilities and \mathfrak{N} -Distances	540
22.3	m -Negative Definite Kernels and Metrics	544
22.3.1	m -Negative Definite Kernels and Metrics	544
22.4	\mathfrak{N} -Metrics and the Problem of Recovering Measures from Potentials	548
22.4.1	Recovering Measures from Potentials	549
22.4.2	Stability in the Problem of Recovering a Measure from its Potential	554
22.5	\mathfrak{N} -Metrics in the Study of Certain Problems of the Characterization of Distributions	559

22.5.1	Characterization of Gaussian and Related Distributions..	559
22.5.2	Characterization of Distributions Symmetric to a Group of Transformations	567
	References	569
23	Statistical Estimates Obtained by the Minimal Distances Method	571
23.1	Introduction	571
23.2	Estimating a Location Parameter: First Approach	571
23.3	Estimating a Location Parameter: Second Approach	575
23.4	Estimating a General Parameter	576
23.5	Estimating a Location Parameter: Third Approach	577
23.6	Semiparametric Estimation	578
	References	579
24	Some Statistical Tests Based on \mathfrak{N}-Distances	581
24.1	Introduction	581
24.2	A Multivariate Two-Sample Test	581
24.3	Testing If Two Distributions Belong to the Same Additive Type	585
24.4	A Test for Multivariate Normality	587
	References	588
25	Distances Defined by Zonoids	589
25.1	Introduction	589
25.2	Main Notions and Definitions	590
25.3	\mathfrak{N} -Distances	591
	References	597
26	\mathfrak{N}-Distance Tests of Uniformity on the Hypersphere	599
26.1	Introduction	599
26.2	Tests of Uniformity on a Hypersphere	600
26.3	Asymptotic Distribution	602
26.3.1	Uniformity on a Circle	602
26.3.2	Uniformity on a Sphere	603
26.3.3	Alternative Approach to the Limit Distribution of T_n	604
26.4	Proofs	607
26.4.1	Proof of Proposition 26.2.1	607
26.4.2	Proof of Proposition 26.3.1	608
26.4.3	Proof of Theorem 26.3.4	608
26.4.4	Proof of Theorem 26.3.5	609
	References	610
