1	General Concepts of Blood Vessel Formation and Remodeling	1
	Introduction	1
	Progenitor Cells	1
	Embryonic Life	1
	Postnatal Life	4
	Formation of the Primary Capillary Plexus (Vasculogenesis)	5
	Cell Recruitment and Assembly	5
	VEGF–VEGFR and the Vasculogenic Cascade	5
	Fibroblast Growth Factors	6
	Other Key Growth Factors	7
	Integrins and Other Adhesion Molecules	7
	Suppressors of Vasculogenesis	7
	Branching and Fusion (Angiogenesis)	7
	Branches Are Formed by Two Distinct Processes:	
	Sprouting and Intussusception	8
	Increases in Lumen Diameter	10
	Assembly of the Vascular Hierarchy	10
	Recruitment and Assembly of Pericytes and Smooth Muscle Cells	10
	Specification of Arterial and Venous Vessels	11
	Remodeling	13
	Remodeling During Development	14
	Remodeling in the Adult	14
	Primary Stimuli for Vascular Growth and Remodeling	15
	Mechanical Forces	15
	Hypoxia	16
	Vascular Integrity	17
	Cell–Cell Junctions	17
	Extracellular Matrix	17
	Pericytes and the Endothelium	17
	References	18
2	Prenatal Coronary Morphogenesis	25
	Introduction	25
	Proepicardium	25
	Origin of Proepicardium	25
	Specification of Proepicardial Cells	26
	Epicardium	27
	Proepicardial Migration and Epicardial Formation	27
	Regulation of Epicardial Formation	27

Epicardial–Myocardial Signaling	28
Epithelial–Mesenchymal Transition and Cell Fate	28
Progenitor Cell Migration and the Subepicardium	29
Coronary Cell Lineages and Differentiation	30
Coronary Endothelial Cells	30
Blood Islands and EDPCs	31
Coronary Smooth Muscle Cells	31
Fibroblasts and Pericytes	32
Establishing the Primary Coronary Plexus	32
The Growth Pattern	32
Relationship of Coronary Tubulogenesis and Extracellular Matrix	32
Hypoxia Is an Initiator of Tubulogenesis	33
Multiple Growth Factors Regulate Tubulogenesis	33
VEGF Family Members Play Key Roles	34
FGFs and Hedgehog Signaling	34
FGFs and VEGFs Cooperate in Tubulogenesis	35
Other Key Molecules for Tubulogenesis	35
Formation of the Coronary Ostia and Onset of Coronary Circulation	35
Vascular Tube Ingrowth into the Aorta	35
Signals for Coronary Ostial and Stem Formation	36
VSMC Recruitment and Assembly	37
Assembly of the Coronary Arterial Tree	38
Development of the Arterial Wall	38
Formation of Coronary Veins and Lymphatics	38
Coronary Veins	38
Lymphogenesis in the Heart	38
Coronary Development in Humans	39
Early Development	39
Later Development	40
References	41
3 Postnatal Coronary Morphogenesis and Growth	47
Introduction	47
Methods for Quantitative Assessment of Vessel Growth	47
Capillary Growth	48
Early Postnatal Growth	48
Later Postnatal Growth	48
Accelerated Myocardial Growth	49
Capillary Arteriolar and Venular Domains	50
Possible Mechanisms Regulating Postnatal Capillary Growth	51
Arterial and Arteriolar Growth	52
Early Rapid Growth of Main Coronary Arteries	52
Arterial Growth and Blood Flow	52
Degenerative Changes in Arteries During Postnatal Growth	52
Possible Mechanisms Underlying Degenerative Changes	53
Arteriolar Postnatal Growth	53
Factors that Regulate Development of the Coronary Arteriolar and Arterial Hierarchy	53
Coronary Blood Flow, O ₂ Consumption, and Ventricular Function	54
Adaptations to Enhanced Pressure Overload	54
Coronary Collaterals	55
References	55
