

# Contents

<b>1</b>	<b>Statistics in Food Science and Nutrition .....</b>	<b>1</b>
1.1	The Food Statistician.....	1
1.2	Historical Anecdotes Relating Statistics to Food Science and Nutrition .....	3
1.3	Why Statistics, Experimental Design, and Epidemiology Matter.....	4
	References .....	5
<b>2</b>	<b>Methods and Principles of Statistical Analysis .....</b>	<b>7</b>
2.1	Recommended Textbooks on Statistics.....	7
2.1.1	Applied Statistics, Epidemiology, and Experimental Design .....	8
2.1.2	Advanced Text on the Theoretical Foundation in Statistics .....	9
2.2	Describing Data.....	10
2.2.1	Categorical Data.....	10
2.2.2	Numerical Data .....	12
2.2.3	Other Types of Data .....	13
2.3	Summarizing Data.....	15
2.3.1	Contingency Tables (Cross Tabs) for Categorical Data .....	15
2.3.2	The Most Representative Value of Continuous Data .....	15
2.3.3	Spread and Variation of Continuous Data.....	16
2.4	Descriptive Plots .....	17
2.4.1	Bar Chart .....	19
2.4.2	Histograms .....	19
2.4.3	Box Plots .....	19
2.4.4	Scatterplots.....	19
2.4.5	Line Plots .....	20
2.5	Statistical Inference (the $p$ -Value Stuff).....	20
2.6	Overview of Classical Statistical Tests .....	21
2.7	Overview of Statistical Models .....	21
	References .....	23

<b>3</b>	<b>Applying Statistics to Food Quality</b>	25
3.1	The Concept of Food Quality	25
3.2	Measuring Quality Quantitatively	26
3.3	Statistical Process Control	27
3.3.1	The Foundation of Statistical Process Control	27
3.3.2	Control Charts	28
3.3.3	The Statistics of Six Sigma	30
3.3.4	Multivariate Statistical Process Control	30
3.4	Statistical Assessment of Sensory Data	32
3.4.1	Methods in Sensory Evaluation	32
3.4.2	Statistical Assessment of Differences Between Foods	33
3.4.3	Statistical Assessment of Similarities Between Foods	35
3.5	Statistical Assessment of Shelf Life	36
3.5.1	Shelf Life and Product Quality	36
3.5.2	Detection of Shelf Life	37
3.5.3	Statistical Assessment of Shelf Life: Food Survival Analysis	37
	References	38
<b>4</b>	<b>Nutritional Epidemiology and Health Effects of Foods</b>	41
4.1	Food: The Source of Health and Disease	41
4.2	Epidemiological Principles and Designs	42
4.2.1	Clinical and Epidemiological Research Strategies	42
4.2.2	Clinical and Epidemiological Study Designs	43
4.3	Methods to Assess Food Intake	45
4.4	Epidemiological Use of Multiple Regression Models	46
4.4.1	Adjusting for Confounders	46
4.4.2	Assessment of Effect Modification (Interaction)	48
4.4.3	Intermediate Variables in the Causal Pathway	49
	References	50
<b>5</b>	<b>Application of Multivariate Analysis: Benefits and Pitfalls</b>	53
5.1	Introduction of Multivariate Statistics in Food Science	53
5.2	Principal Component Analysis or Factor Analysis: When and Where	54
5.2.1	What Is Principal Component Analysis?	54
5.2.2	What Is Factor Analysis?	56
5.2.3	Overall Recommendations	58
5.3	Exploratory Data Analysis	60
5.4	Pattern Recognition and Clustering	60
5.5	Modeling and Optimization	61
5.6	Limitations with Multivariate Statistical Analysis in Food Science	63
	References	64
	<b>Index</b>	65

Statistics in Food Science and Nutrition

Pripp, A.H.

2013, VIII, 66 p. 15 illus., 3 illus. in color., Softcover

ISBN: 978-1-4614-5009-2
