

Contents

1	Mechanical Modeling of Material Behavior	1
1.1	Introduction	1
1.2	Conservation Principles, Control Volumes, and Free Object Diagrams	1
1.3	Models and the Real Physical World	2
1.4	The Types of Models Used in Mechanics	4
1.5	The Particle Model	6
1.6	The Rigid Object Model	9
1.7	The Deformable Continuum Model	10
1.8	Lumped Parameter Models	11
1.9	The Limits of Reductionism and Determinism	22
	References	23
2	Basic Continuum Kinematics	25
2.1	The Deformable Material Model, the Continuum	25
2.2	Rates of Change and the Spatial Representation of Motion	35
2.3	Infinitesimal Motions	42
2.4	The Strain Conditions of Compatibility	48
3	Continuum Formulations of Conservation Laws	53
3.1	The Conservation Principles	53
3.2	The Conservation of Mass	54
3.3	The State of Stress at a Point	57
3.4	The Stress Equations of Motion	64
3.5	The Conservation of Energy	70
	References	74
4	Modeling Material Symmetry	75
4.1	Introduction	75
4.2	The Representative Volume Element	76
4.3	Crystalline Materials and Textured Materials	79

4.4	Planes of Mirror Symmetry	83
4.5	Characterization of Material Symmetries by Planes of Symmetry	87
4.6	The Forms of the Symmetric Three-Dimensional Linear Transformation A	91
4.7	The Forms of the Symmetric Six-Dimensional Linear Transformation \hat{C}	95
4.8	Curvilinear Anisotropy	100
4.9	Symmetries that Permit Chirality	101
4.10	Relevant Literature	104
	References	105
5	Formulation of Constitutive Equations	107
5.1	Guidelines for the Formulation of Constitutive Equations	108
5.2	Constitutive Ideas	108
5.3	Localization	111
5.4	Invariance Under Rigid Object Motions	112
5.5	Determinism	113
5.6	Linearization	114
5.7	Coordinate Invariance	115
5.8	Homogeneous Versus Inhomogeneous Constitutive Models	115
5.9	Restrictions Due to Material Symmetry	116
5.10	The Symmetry of the Material Coefficient Tensors	118
5.11	Restrictions on the Coefficients Representing Material Properties	123
5.12	Summary of Results	125
	References	126
6	Four Linear Continuum Theories	127
6.1	Formation of Continuum Theories	127
6.2	The Theory of Fluid Flow Through Rigid Porous Media	128
6.3	The Theory of Elastic Solids	134
6.4	The Theory of Viscous Fluids	154
6.5	The Theory of Viscoelastic Materials	160
6.6	Relevant Literature	171
	References	172
7	Modeling Material Microstructure	175
7.1	Introduction	175
7.2	The Representative Volume Element	176
7.3	Effective Material Parameters	179
7.4	Effective Elastic Constants	183
7.5	Effective Permeability	188

7.6	Structural Gradients	190
7.7	Tensorial Representations of Microstructure	192
7.8	The Stress–Strain–Fabric Relation	196
7.9	Relevant Literature	198
	References	198
8	Quasistatic Poroelasticity	201
8.1	Poroelastic Materials	201
8.2	The Stress–Strain–Pore Pressure Constitutive Relation	204
8.3	The Fluid Content–Stress–Pore Pressure Constitutive Relation	211
8.4	Darcy’s Law	213
8.5	Matrix Material and Pore Fluid Incompressibility Constraints	214
8.6	The Undrained Elastic Coefficients	217
8.7	Expressions of Mass and Momentum Conservation	219
8.8	The Basic Equations of Poroelasticity	220
8.9	The Basic Equations of Incompressible Poroelasticity	222
8.10	Some Example Isotropic Poroelastic Problems	223
8.11	Three Approaches to Poroelasticity	231
8.12	Relevant Literature	233
	References	234
9	Dynamic Poroelasticity	237
9.1	Poroelastic Waves	237
9.2	Historical Backgrounds and the Relationship to the Quasistatic Theory	239
9.3	Fabric Dependence of the Material Coefficients in the Coupled Wave Equations	243
9.4	Plane Waves	244
9.5	Fabric Dependence of the Tensors Q , C , J , and R	246
9.6	Propagation of Waves in a Principal Direction of Material Symmetry	247
9.7	Propagation of Waves in a Direction That Is Not a Principal Direction of Material Symmetry; Quasi-Waves	259
	References	261
10	Mixture Theory-Based Poroelasticity and the Second Law of Thermodynamics	263
10.1	Introduction	263
10.2	The Present Mixture Theory-Based Poroelasticity Approach	265
10.3	The Second law of Thermodynamics	266
10.4	Kinematics of Mixtures	266

10.5	The Conservation Laws for Mixtures	270
10.6	A Statement of Irreversibility in Mixture Processes	275
10.7	The Entropy Inequality for a Mixture	279
10.8	Constitutive Equations for a Multi-Constituent Porous Medium	283
10.9	Relevant Literature	289
	References	292
11	Kinematics and Mechanics of Large Elastic Deformations	293
11.1	Large Deformations	293
11.2	Large Homogeneous Deformations	294
11.3	Polar Decomposition of the Deformation Gradients	300
11.4	The Strain Measures for Large Deformations	305
11.5	Measures of Volume and Surface Change in Large Deformations	312
11.6	Stress Measures	315
11.7	Finite Deformation Elasticity	319
11.8	The Isotropic Finite Deformation Stress–Strain Relation	320
11.9	Finite Deformation Hyperelasticity	323
11.10	Incompressible Elasticity	326
11.11	Transversely Isotropic Hyperelasticity	329
11.12	Relevant Literature	332
	References	333
	Appendix A	335
A.1	Introduction and Rationale	335
A.2	Definition of Square, Column, and Row Matrices	335
A.3	The Types and Algebra of Square Matrices	337
A.4	The Algebra of n-Tuples	343
A.5	Linear Transformations	345
A.6	Vector Spaces	352
A.7	Second Order Tensors	358
A.8	The Alternator and Vector Cross Products	366
A.9	The Moment of Inertia Tensor	373
A.10	Connection to Mohr’s Circles	384
A.11	Special Vectors and Tensors in Six Dimensions	387
A.12	The Gradient Operator and the Divergence Theorem	393
A.13	The Index Notation: Review and Summary	498
A.14	Exact Differentials	408

A.15 Tensor Components in Cylindrical Coordinates 409

A.16 Laplace Transform Refresher 412

A.17 Direct Integration of First Order Differential Equations 417
