## Part I Introduction to Probability Theory and Stochastic Processes

<b>1</b>	<b>Introduction to Probability Theory</b>	3
1.1	Summary of Basic Notions of Probability Theory	3
1.2	Frequently Used Discrete and Continuous Distributions	35
1.2.1	Discrete Distributions	35
1.2.2	Continuous Distributions	39
1.3	Limit Theorems	44
1.3.1	Convergence Notions	44
1.3.2	Laws of Large Numbers	46
1.3.3	Central Limit Theorem, Lindeberg–Feller Theorem	48
1.3.4	Infinitely Divisible Distributions and Convergence to the Poisson Distribution	49
1.4	Exercises	52
<b>2</b>	<b>Introduction to Stochastic Processes</b>	55
2.1	Stochastic Processes	55
2.2	Finite-Dimensional Distributions of Stochastic Processes	56
2.3	Stationary Processes	57
2.4	Gaussian Process	58
2.5	Stochastic Process with Independent and Stationary Increments	58
2.6	Wiener Process	58
2.7	Poisson Process	59
2.7.1	Definition of Poisson Process	59
2.7.2	Construction of Poisson Process	62
2.7.3	Basic Properties of a Homogeneous Poisson Process	67
2.7.4	Higher-Dimensional Poisson Process	72
2.8	Exercises	76

<b>3</b>	<b>Markov Chains</b>	77
3.1	Discrete-Time Markov Chains with Discrete State Space	78
3.1.1	Homogeneous Markov Chains	80
3.1.2	The $m$ -Step Transition Probabilities	84
3.1.3	Classification of States of Homogeneous Markov Chains	86
3.1.4	Recurrent Markov Chains	91
3.2	Fundamental Limit Theorem of Homogeneous Markov Chains	96
3.2.1	Positive Recurrent and Null Recurrent Markov Chains	96
3.2.2	Stationary Distribution of Markov Chains	100
3.2.3	Ergodic Theorems for Markov Chains	102
3.2.4	Estimation of Transition Probabilities	104
3.3	Continuous-Time Markov Chains	105
3.3.1	Characterization of Homogeneous Continuous-Time Markov Chains	106
3.3.2	Stepwise Markov Chains	109
3.3.3	Construction of Stepwise Markov Chains	111
3.3.4	Some Properties of the Sample Path of Continuous-Time Markov Chains	111
3.3.5	Poisson Process as Continuous-Time Markov Chain	113
3.3.6	Reversible Markov Chains	115
3.4	Birth-Death Processes	116
3.4.1	Some Properties of Birth-Death Processes	116
3.5	Exercises	120
<b>4</b>	<b>Renewal and Regenerative Processes</b>	123
4.1	Basic Theory of Renewal Processes	123
4.1.1	Limit Theorems for Renewal Processes	134
4.2	Regenerative Processes	137
4.2.1	Estimation of Convergence Rate for Regenerative Processes	141
4.3	Analysis Methods Based on Markov Property	142
4.3.1	Time-Homogeneous Behavior	143
4.4	Analysis of Continuous-Time Markov Chains	143
4.4.1	Analysis Based on Short-Term Behavior	145
4.4.2	Analysis Based on First State Transition	146
4.5	Semi-Markov Process	149
4.5.1	Analysis Based on State Transitions	151
4.5.2	Transient Analysis Using the Method of Supplementary Variables	154
4.6	Markov Regenerative Process	159
4.6.1	Transient Analysis Based on Embedded Markov Renewal Series	160
4.7	Exercises	163

<b>5</b>	<b>Markov Chains with Special Structures</b>	165
5.1	Phase Type Distributions	165
5.1.1	Continuous-Time PH Distributions	165
5.1.2	Discrete-Time PH Distributions	170
5.1.3	Special PH Classes	171
5.1.4	Fitting with PH Distributions	173
5.2	Markov Arrival Process	173
5.2.1	Properties of Markov Arrival Processes	176
5.2.2	Examples of Simple Markov Arrival Processes	178
5.2.3	Batch Markov Arrival Process	180
5.3	Quasi-Birth-Death Process	181
5.3.1	Matrix-Geometric Distribution	183
5.3.2	Quasi-Birth-and-Death Process with Irregular Level 0	185
5.3.3	Finite Quasi-Birth-and-Death Process	186
5.4	Exercises	188

## Part II Queueing Systems

<b>6</b>	<b>Introduction to Queueing Systems</b>	191
6.1	Queueing Systems	191
6.2	Classification of Basic Queueing Systems	192
6.3	Queueing System Performance Parameters	193
6.4	Little's Law	195
6.5	Exercises	197
<b>7</b>	<b>Markovian Queueing Systems</b>	199
7.1	$M/M/1$ Queue	199
7.2	Transient Behavior of an $M/M/1$ Queueing System	206
7.3	$M/M/m$ Queueing System	214
7.4	$M/M/\infty$ Queueing System	218
7.5	$M/M/m/m$ Queueing System	219
7.6	$M/M/1//N$ Queueing System	220
7.7	Exercises	222
<b>8</b>	<b>Non-Markovian Queueing Systems</b>	225
8.1	$M/G/1$ Queueing System	225
8.1.1	Description of $M/G/1$ System	225
8.1.2	Main Differences Between $M/M/1$ and $M/G/1$ Systems	226
8.1.3	Main Methods for Investigating $M/G/1$ System	227
8.2	Embedded Markov Chains	227
8.2.1	Step (A): Determining Queue Length	228
8.2.2	Proof of Irreducibility and Aperiodicity	231
8.2.3	Step (B): Proof of Ergodicity	232
8.2.4	Pollaczek–Khinchin Mean Value Formula	232

8.2.5	Proof of Equality $E(\Delta_1^2) = \lambda^2 E(Y_1^2) + \rho$ .....	233
8.2.6	Step (C): Ergodic Distribution of Queue Length .....	234
8.2.7	Investigation on Busy/Free Intervals in M/G/1 Queueing System .....	237
8.2.8	Investigation on the Basis of the Regenerative Process ..	242
8.2.9	Proof of Relation (D) (Khinchin (1932)) .....	249
8.3	Limit Distribution of Virtual Waiting Time .....	253
8.3.1	Takács' Integrodifferential Equation .....	254
8.4	G/M/1 Queue .....	258
8.4.1	Embedded Markov Chain .....	258
8.5	Exercises .....	264
<b>9</b>	<b>Queueing Systems with Structured Markov Chains</b> .....	<b>267</b>
9.1	<i>PH/M/1</i> Queue .....	267
9.1.1	QBD Process of <i>PH/M/1</i> Queue .....	268
9.1.2	Condition of Stability .....	269
9.1.3	Performance Measures .....	270
9.2	<i>M/PH/1</i> Queue .....	272
9.2.1	QBD of <i>M/PH/1</i> Queue .....	272
9.2.2	Closed-Form Solution of Stationary Distribution .....	274
9.2.3	Performance Measures .....	275
9.3	Other Queues with Underlying QBD .....	276
9.3.1	MAP/M/1 Queue .....	276
9.3.2	M/MAP/1 Queue .....	277
9.3.3	MAP/PH/1 Queue .....	278
9.3.4	MAP/MAP/1 Queue .....	279
9.3.5	MAP/PH/1/K Queue .....	279
9.4	Exercises .....	280
<b>10</b>	<b>Queueing Networks</b> .....	<b>281</b>
10.1	Introduction of Queueing Networks .....	281
10.2	Burke's Theorem .....	282
10.3	Tandem Network of Two Queues .....	283
10.4	Acyclic Queueing Networks .....	284
10.5	Open, Jackson-Type Queueing Networks .....	285
10.6	Closed, Gordon–Newell-Type Queueing Networks .....	290
10.7	BCMP Networks: Multiple Customer and Service Types .....	296
10.8	Non-Product-Form Queueing Networks .....	299
10.9	Traffic-Based Decomposition .....	300
10.10	Exercises .....	300
<b>11</b>	<b>Applied Queueing Systems</b> .....	<b>303</b>
11.1	Bandwidth Sharing of Finite-Capacity Links with Different Traffic Classes .....	303
11.1.1	Traffic Classes .....	303
11.1.2	Bandwidth Sharing by CBR Traffic Classes .....	305

11.1.3	Bandwidth Sharing with VBR Traffic Classes .....	307
11.1.4	Bandwidth Sharing with Adaptive Traffic Classes .....	309
11.1.5	Bandwidth Sharing with Elastic Traffic Classes .....	311
11.1.6	Bandwidth Sharing with Different Traffic Classes .....	312
11.2	Packet Transmission Through Slotted Time Channel .....	312
11.3	Analysis of an Asynchronous Transfer Mode Switch .....	315
11.3.1	Traffic Model of an Asynchronous Transfer Mode Switch .....	315
11.3.2	Input Buffering .....	317
11.3.3	Output Buffering .....	321
11.3.4	Performance Parameters .....	322
11.3.5	Output Buffering in $N \times N$ Switch .....	324
11.3.6	Throughput of $N \times N$ Switch with Input Buffering ....	327
11.4	Conflict Resolution Methods of Random Access Protocols .....	329
11.4.1	ALOHA Protocol .....	329
11.4.2	CSMA and CSMA/CD Protocols .....	335
11.4.3	IEEE 802.11 Protocol .....	339
11.5	Priority Service Systems .....	340
11.5.1	Priority System with Exponentially Distributed Service Time .....	341
11.5.2	Probabilities $p_{ij}(t)$ .....	342
11.5.3	Priority System with General Service Time .....	345
11.6	Systems with Several Servers and Queues .....	349
11.6.1	Multichannel Systems with Waiting and Refusals .....	349
11.6.2	Closed Queueing Network Model of Computers .....	352
11.7	Retrial Systems .....	353
11.7.1	Continuous-Time Retrial System .....	353
11.7.2	Waiting Time for Continuous Retrial System .....	362
11.8	Exercises .....	365
<b>Appendix: Functions and Transforms .....</b>		<b>369</b>
A.1	Nonlinear Transforms .....	369
A.2	$z$ -Transform .....	370
A.2.1	Main Properties of $z$ -Transform .....	371
A.3	Laplace–Stieltjes and Laplace Transforms in General Form ....	372
A.3.1	Examples of Laplace Transform of Some Distributions .....	374
A.3.2	Sum of a Random Number of Independent Random Variables .....	375
A.4	Bessel and Modified Bessel Functions of the First Kind .....	376
A.5	Notations .....	377
<b>Bibliography .....</b>		<b>379</b>
<b>Index .....</b>		<b>383</b>

<http://www.springer.com/978-1-4614-5316-1>

Introduction to Queueing Systems with  
Telecommunication Applications

Lakatos, L.; Szeidl, L.; Telek, M.

2013, XII, 388 p., Hardcover

ISBN: 978-1-4614-5316-1
