

# Contents

<b>1</b>	<b>Introduction</b>	<b>1</b>
1.1	Measurement, Analysis, Modeling, and Simulation	2
1.2	Interference and Noise	5
1.3	Systems Modeling and Model-Based Analysis	6
1.4	Simulation of Systems and Virtual Experiments	8
1.5	The ECG as Model-Based Measurement	9
1.6	Exercises	11
<b>2</b>	<b>Signal Measurement</b>	<b>13</b>
2.1	Physiological Measurement	13
2.2	Static Characteristics of Transducers: Linearity	16
2.3	Noise and Interference	19
2.4	Dynamic Characteristics of Transducers	20
2.5	Transduction and Measurement Case Study	23
2.6	Exercises	23
<b>3</b>	<b>Signals and Systems Basics</b>	<b>27</b>
3.1	Time Domain Signals and Systems	27
3.2	Linear Systems: Impulse Response	31
3.3	Frequency Decomposition of Signals	39
3.4	Frequency Response and Pole–Zero plots	50
3.5	Random Signals	57
3.6	Exercises	61
<b>4</b>	<b>Signal Filtering and System Control</b>	<b>65</b>
4.1	Frequency Filters and Optimal Filtering	66
4.2	Standard Filters: LPF, HPF, BPF, BSF	73
4.3	Realization of Simple Filters	80
4.4	Ensemble Averaging	84
4.5	Feedback Control Systems	86
4.6	Exercises	91

4.7	Programming Exercise .....	93
4.7.1	Introduction to Graphics for Signal Analysis .....	93
<b>5</b>	<b>Digitization and Discrete Systems .....</b>	<b>95</b>
5.1	Sampling .....	96
5.2	Quantization .....	102
5.3	Reconstruction Methods .....	105
5.4	Discrete Systems .....	106
5.5	Discretization of Systems .....	112
5.6	Exercises .....	116
5.7	Programming Exercises .....	118
5.7.1	Discrete Convolution .....	118
5.7.2	Digital Filtering .....	119
<b>6</b>	<b>Discrete Signal Processing .....</b>	<b>121</b>
6.1	Digital Filtering and System Identification .....	122
6.2	Discrete Fourier Transform .....	128
6.2.1	Summary of Fourier Transforms .....	141
6.3	Power Spectrum and Short-Time Fourier Transform .....	142
6.4	The Wavelet Transform .....	148
6.5	Time-Series Models .....	159
6.6	Exercises .....	166
6.7	Programming Exercises .....	168
6.7.1	Discrete Fourier Transform .....	168
6.7.2	Data Interpolation Using the Fourier Transform .....	169
6.7.3	Power Spectrum .....	171
<b>7</b>	<b>Numerical Methods and Geometry for Graphics .....</b>	<b>173</b>
7.1	Introduction to Computer Simulations .....	173
7.2	Computer Graphics, Drawing Graphs .....	175
7.3	Geometry of 3-D Projections .....	177
7.4	Animation of Graphs and Images .....	181
7.5	Virtual Experiments .....	182
7.6	Exercises .....	183
<b>8</b>	<b>Nerve Action Potentials .....</b>	<b>185</b>
8.1	Nerve Excitation and Propagation .....	185
8.2	The Hodgkin–Huxley Model .....	188
8.3	Fluctuation Analysis .....	196
8.4	Nerve AP Propagation .....	200
8.5	Simulating the Action Potential .....	203
8.6	Exercises .....	205
8.7	Programming Exercises .....	205
8.7.1	The Hodgkin–Huxley Model.....	205
8.7.2	The Propagating Action Potential.....	208

<b>9</b>	<b>External Stimulation of Excitable Tissue</b>	211
9.1	Stimulation of Nerves in Tissue	211
9.2	Strength-Duration and Recruitment Curves	213
9.3	Electrical Stimulation	214
9.4	Magnetic Stimulation	219
9.5	Collision Techniques in Neurological Testing	222
9.6	Exercises	224
<b>10</b>	<b>Skeletal Muscle Contraction</b>	225
10.1	Skeletal Muscle Behavior Structure and Organization	225
10.2	The Sliding Filament Model	230
10.3	Force Generation: Huxley's Model	238
10.4	Linearization of the Muscle Model	244
10.5	Applications of Skeletal Muscle Modeling	248
10.6	Exercises	250
10.7	Programming Exercise	251
10.7.1	Skeletal Muscle model	251
<b>11</b>	<b>The Electromyogram</b>	253
11.1	Recording Myoelectric Signals	254
11.2	Electrode Transfer Function	257
11.3	Motor Unit Action Potential	263
11.4	Voluntary EMG Model	269
11.5	EMG Analysis	270
11.6	Exercises	276
11.7	Programming Exercise	277
11.7.1	EMG Model	277
<b>12</b>	<b>Neuromuscular Control</b>	281
12.1	Neuromuscular Reflex	281
12.2	Unit of Movement: Two Muscle Joint	285
12.3	Modeling Reflex Control of Movement	287
12.4	Movement Analysis	292
12.5	Understanding Pathology Using Neuromuscular Control Models	293
12.6	Exercises	294
<b>13</b>	<b>Neural Firing Rate Analysis</b>	297
13.1	Neural Information Transmission	297
13.2	Pulse Sequences and Modulation Theory	299
13.3	Estimating Firing Rate	306
13.4	Spike Detection and Demodulation	311
13.5	Applications of Firing Rate Demodulation	314
13.6	Exercises	317
<b>14</b>	<b>Immune Response to Infection</b>	319
14.1	The Immune Response	319

14.2	Linearized Model of the Immune Response .....	321
14.3	System Equations for the Immune Response .....	323
14.4	Stability .....	324
14.5	Extending the Model .....	325
14.6	Exercises .....	325
<b>15</b>	<b>Linear Model of Blood Flow .....</b>	<b>327</b>
15.1	The Cardiovascular System .....	327
15.2	Modeling Blood Flow .....	328
15.3	Electrical Analogue of Fluid Parameters .....	330
15.4	Model of Coronary Circulation .....	332
15.5	Applications of Cardiovascular Modeling .....	332
15.6	Exercises .....	334
	<b>Appendix: Data Acquisition and Real-Time Signal Processing .....</b>	<b>337</b>
	<b>Description of Computer Demonstrations .....</b>	<b>341</b>
	<b>Further Reading .....</b>	<b>351</b>
	<b>Solutions to Exercises .....</b>	<b>355</b>
	<b>Index .....</b>	<b>385</b>

Signals and Systems in Biomedical Engineering  
Signal Processing and Physiological Systems Modeling  
Devasahayam, S.R.  
2013, XIV, 390 p., Hardcover  
ISBN: 978-1-4614-5331-4
