Preface	v
Introduction	xi
A Brief Summary	xi
Chapter Summaries	xiii
Remarks on Notation	xv
Acknowledgements	xvi
1 Hadamard Sets	1
1.1 Introduction	1
1.2 Classical Results Related to Hadamard Sets	2
1.3 Interpolation Properties	3
1.4 Sums of Hadamard Sets	9
1.5 Bohr Cluster Points of Hadamard Sets and Their Sums	12
1.6 Remarks and Credits	14
1.7 Exercises	16
2 ε-Kronecker Sets	19
2.1 Introduction	19
2.2 Definition and Interpolation Properties	20
2.3 The Relationship Between Kronecker Sets and I_0 Sets	25
2.4 Presence of ε -Kronecker Sets	28
2.5 Approximating Arbitrary Choices of ± 1	32
2.6 Arithmetic Properties of ε -Kronecker Sets	35
2.7 Products of ε -Kronecker Sets Are “Small”	38
2.8 Remarks and Credits	43
2.9 Exercises	45
3 I_0 Sets and Their Characterizations	49
3.1 Introduction	49
3.2 Characterizations by Approximate Interpolation	51

3.3	Function Algebra Characterizations	58
3.4	Topological Characterizations	60
3.5	I_0 Sets Do Not Cluster at a Continuous Character	62
3.6	Remarks and Credits	64
3.7	Exercises	65
4	More Restrictive Classes of I_0 Sets	67
4.1	Introduction	67
4.2	Distinctiveness of the Classes I_0 , RI_0 and FZI_0	68
4.3	A Topological Characterization of RI_0	69
4.4	Pseudo-Rademacher Sets	71
4.5	The Existence of Large I_0 and FZI_0 Sets	73
4.6	Remarks and Credits	74
4.7	Exercises	75
5	Unions and Decompositions of $I_0(U)$ Sets	77
5.1	Introduction	77
5.2	Unions of $I_0(U)$ Sets	78
5.3	I_0 Sets Are Finite Unions of Sets That Are $I_0(U)$ with Bounded Length	81
5.4	Union Results for More Restricted Types of I_0 Sets	85
5.5	Remarks and Credits	89
5.6	Exercises	90
6	Sidon Sets: Introduction and Decomposition Properties...	93
6.1	Introduction	93
6.2	Characterizations and Examples	94
6.3	Important Properties	102
6.4	Decompositions of Sidon Sets	107
6.5	Remarks and Credits	111
6.6	Exercises	114
7	Sidon Sets Are Proportional Quasi-independent	117
7.1	Introduction	117
7.2	The Pisier Characterization of Sidon Sets	118
7.3	Pisier's ε -Net Condition	124
7.4	Characterizing Sidon Sets with Step Length Tending to Infinity	126
7.5	Remarks and Credits	132
7.6	Exercises	133
8	How Thin Are Sidon Sets in the Bohr Compactification?	135
8.1	Introduction	135
8.2	If a Sidon Set Clusters at a Continuous Character	136

8.3	Probabilistic Evidence for a Sidon Set Having No Bohr Cluster Points in Γ	139
8.4	Remarks and Credits	150
8.5	Exercises	150
9	The Relationship Between Sidon and I_0	153
9.1	Introduction	153
9.2	Sidon Sets Are Proportional I_0	154
9.3	Sidon Sets Are Proportional ε -Kronecker	158
9.4	The Ramsey–Wells–Bourgain Characterization of I_0 Sets	161
9.5	Remarks and Credits	171
9.6	Exercises	172
10	Sets of Zero Discrete Harmonic Density	175
10.1	Introduction	175
10.2	Characterizations and Closure Properties	176
10.3	Union Results	179
10.4	Examples and Applications	183
10.5	Remarks and Credits	185
10.6	Exercises	186
Appendix A Interpolation and Sidon Sets for Groups That Are Not Compact and Abelian		187
A.1	Interpolation and Sidon Sets in Non-compact Abelian Groups	187
A.2	Interpolation and Sidon Sets in Compact, Non-abelian Groups	192
A.3	Remarks and Credits	199
A.4	Exercises	199
Appendix B Combinatorial Results		201
B.1	Words and Quasi-independent Sets	201
Appendix C Background Material		207
C.1	Overview of Harmonic Analysis on Locally Compact Abelian Groups	207
C.2	Basic Probability	216
C.3	Remarks and Credits	219
C.4	Exercises	220

Interpolation and Sidon Sets for Compact Groups

Graham, C.; Hare, K.E.

2013, XVII, 249 p., Hardcover

ISBN: 978-1-4614-5391-8
