

Contents

1	Introduction to Asymptotic Approximations	1
1.1	Introduction	1
1.2	Taylor's Theorem and l'Hospital's Rule	3
1.3	Order Symbols	4
1.4	Asymptotic Approximations	7
1.4.1	Asymptotic Expansions	9
1.4.2	Accuracy Versus Convergence of an Asymptotic Series	13
1.4.3	Manipulating Asymptotic Expansions	15
1.5	Asymptotic Solution of Algebraic and Transcendental Equations	22
1.6	Introduction to the Asymptotic Solution of Differential Equations	33
1.7	Uniformity	47
1.8	Symbolic Computing	54
2	Matched Asymptotic Expansions	57
2.1	Introduction	57
2.2	Introductory Example	58
2.2.1	Step 1: Outer Solution	59
2.2.2	Step 2: Boundary Layer	60
2.2.3	Step 3: Matching	62
2.2.4	Step 4: Composite Expansion	63
2.2.5	Matching Revisited	63
2.2.6	Second Term	67
2.2.7	Discussion	69
2.3	Examples Involving Boundary Layers	74
2.3.1	Step 1: Outer Expansion	74
2.3.2	Steps 2 and 3: Boundary Layers and Matching	74
2.3.3	Step 4: Composite Expansion	76
2.4	Transcendentally Small Terms	86

2.5	Interior Layers	93
2.5.1	Step 1: Outer Expansion	93
2.5.2	Step 1.5: Locating the Layer	93
2.5.3	Steps 2 and 3: Interior Layer and Matching	95
2.5.4	Step 3.5: Missing Equation	96
2.5.5	Step 4: Composite Expansion	97
2.5.6	Kummer Functions	98
2.6	Corner Layers	106
2.6.1	Step 1: Outer Expansion	107
2.6.2	Step 2: Corner Layer	107
2.6.3	Step 3: Matching	109
2.6.4	Step 4: Composite Expansion	109
2.7	Partial Differential Equations	114
2.7.1	Elliptic Problem	114
2.7.2	Outer Expansion	116
2.7.3	Boundary-Layer Expansion	118
2.7.4	Composite Expansion	120
2.7.5	Parabolic Boundary Layer	121
2.7.6	Parabolic Problem	122
2.7.7	Outer Expansion	123
2.7.8	Inner Expansion	124
2.8	Difference Equations	131
2.8.1	Outer Expansion	132
2.8.2	Boundary-Layer Approximation	132
2.8.3	Numerical Solution of Differential Equations	135
3	Multiple Scales	139
3.1	Introduction	139
3.2	Introductory Example	140
3.2.1	Regular Expansion	140
3.2.2	Multiple-Scale Expansion	141
3.2.3	Labor-Saving Observations	144
3.2.4	Discussion	145
3.3	Introductory Example (continued)	152
3.3.1	Three Time Scales	153
3.3.2	Two-Term Expansion	155
3.3.3	Some Comparisons	155
3.3.4	Uniqueness and Minimum Error	155
3.4	Forced Motion Near Resonance	158
3.5	Weakly Coupled Oscillators	168
3.6	Slowly Varying Coefficients	176
3.7	Boundary Layers	183
3.8	Introduction to Partial Differential Equations	184
3.9	Linear Wave Propagation	189

3.10	Nonlinear Waves	194
3.10.1	Nonlinear Wave Equation	194
3.10.2	Wave–Wave Interactions	197
3.10.3	Nonlinear Diffusion	199
3.11	Difference Equations	209
3.11.1	Weakly Nonlinear Difference Equation	209
3.11.2	Chain of Oscillators	212
4	The WKB and Related Methods	223
4.1	Introduction	223
4.2	Introductory Example	224
4.2.1	Second Term of Expansion	227
4.2.2	General Discussion	229
4.3	Turning Points	236
4.3.1	The Case Where $q'(x_t) > 0$	236
4.3.2	The Case Where $q'(x_t) < 0$	242
4.3.3	Multiple Turning Points	243
4.3.4	Uniform Approximation	244
4.4	Wave Propagation and Energy Methods	250
4.4.1	Energy Methods	252
4.5	Wave Propagation and Slender-Body Approximations	256
4.5.1	Solution in Transition Region	259
4.5.2	Matching	260
4.6	Ray Methods	264
4.6.1	WKB Expansion	266
4.6.2	Surfaces and Wave Fronts	267
4.6.3	Solution of Eikonal Equation	268
4.6.4	Solution of Transport Equation	269
4.6.5	Ray Equations	270
4.6.6	Summary	271
4.7	Parabolic Approximations	281
4.7.1	Heuristic Derivation	282
4.7.2	Multiple-Scale Derivation	283
4.8	Discrete WKB Method	286
4.8.1	Turning Points	289
5	The Method of Homogenization	297
5.1	Introduction	297
5.2	Introductory Example	297
5.2.1	Properties of the Averaging Procedure	305
5.2.2	Summary	305
5.3	Multidimensional Problem: Periodic Substructure	309
5.3.1	Implications of Periodicity	309
5.3.2	Homogenization Procedure	311

5.4	Porous Flow	316
5.4.1	Reduction Using Homogenization	317
5.4.2	Averaging	319
5.4.3	Homogenized Problem	320
6	Introduction to Bifurcation and Stability	325
6.1	Introduction	325
6.2	Introductory Example	326
6.3	Analysis of a Bifurcation Point	327
6.3.1	Lyapunov–Schmidt Method	329
6.3.2	Linearized Stability	331
6.3.3	Example: Delay Equation	334
6.4	Quasi-Steady States and Relaxation	341
6.4.1	Outer Expansion	343
6.4.2	Initial Layer Expansion	343
6.4.3	Corner-Layer Expansion	344
6.4.4	Interior-Layer Expansion	345
6.5	Bifurcation of Periodic Solutions	351
6.6	Systems of Ordinary Differential Equations	357
6.6.1	Linearized Stability Analysis	357
6.6.2	Limit Cycles	362
6.7	Weakly Coupled Nonlinear Oscillators	369
6.8	An Example Involving a Nonlinear Partial Differential Equation	376
6.8.1	Steady State Solutions	377
6.8.2	Linearized Stability Analysis	379
6.8.3	Stability of Zero Solution	380
6.8.4	Stability of the Branches that Bifurcate from the Zero Solution	381
6.9	Metastability	386
A	Taylor Series	393
A.1	Single Variable	393
A.2	Two Variables	393
A.3	Multivariable	394
A.4	Useful Examples for x Near Zero	394
A.5	Power Functions	395
A.6	Trig Functions	395
A.7	Exponential and Log Functions	396
A.8	Hyperbolic Functions	396
B	Solution and Properties of Transition Layer Equations	397
B.1	Airy Functions	397
B.1.1	Differential Equation	397
B.1.2	General Solution	397

B.1.3	Particular Values	398
B.1.4	Asymptotic Approximations	398
B.1.5	Connection with Bessel Functions	399
B.2	Kummer's Function	399
B.2.1	Differential Equation	399
B.2.2	General Solution	400
B.2.3	Particular Values	401
B.2.4	Useful Formulas	401
B.2.5	Special Cases	401
B.2.6	Polynomials	402
B.2.7	Asymptotic Approximations	402
B.2.8	Related Special Functions	403
B.3	Higher-Order Turning Points	404
B.3.1	Differential Equation	404
B.3.2	General Solution	404
B.3.3	Asymptotic Approximations	404
C	Asymptotic Approximations of Integrals	407
C.1	Introduction	407
C.2	Watson's Lemma	407
C.3	Laplace's Approximation	408
C.4	Stationary Phase Approximation	409
D	Second-Order Difference Equations	411
D.1	Initial-Value Problems	412
D.2	Boundary-Value Problems	413
E	Delay Equations	415
E.1	Differential Delay Equations	415
E.2	Integrodifferential Delay Equations	416
E.2.1	Basis Function Approach	417
E.2.2	Differential Equation Approach	418
	References	421
	Index	433
