

Contents

1	Introduction	1
1.1	Introduction	1
2	Sensors for Human Behavior Analysis	7
2.1	Motivation	7
2.2	Radio Frequencies Identifier Technology	8
2.3	Pressure Sensors	9
2.4	Micro Electro-Mechanical Systems Sensors	10
2.5	Image Sensors	11
2.6	Summary	12
3	Related Work	15
3.1	Introduction	15
3.2	Motion Detection	16
3.3	Object Detection and Representation	17
3.4	Object Tracking	19
3.5	Human Behavior Analysis and Recognition	27
3.5.1	Scene Interpretation	28
3.5.2	Human Recognition	33
3.5.3	Action Primitive and Grammars	38
3.6	Summary	41
4	Sensor Data Interpretation for Symbolic Analysis	45
4.1	Introduction	45
4.2	Epipolar Geometry	46
4.3	Proposed System	48
4.3.1	Motion and Object Detection Module	48
4.3.2	Features Extraction Modules	49
4.3.3	Correspondence Finder Module	53
4.4	Summary	54

5	Semantic Analysis	57
5.1	Introduction	57
5.2	Switching Domains: From Trajectories to Words	58
5.3	Overview of the Proposed Methodology.	61
5.4	Grammars and Languages.	63
5.5	The Grammar Used in the Proposed Methodology.	66
5.6	The Proposed Methodology and the Time	72
5.7	Hierarchical Scene Analysis	76
5.8	Summary	77
6	Evaluation of the Proposed Methodology	79
6.1	Introduction	79
6.2	Example of Application: Video Surveillance System	80
6.3	Example of Application: System for Human Behavior Classification.	85
6.4	Test of the Proposed Solution to the Correspondence Problem	88
6.5	Summary	92
7	Conclusions	93
7.1	Concluding Remarks	93
7.2	Future Developments	94
	References	97

Semantic Analysis and Understanding of Human
Behavior in Video Streaming

Amato, A.; Di Lecce, V.; Piuri, V.

2013, XII, 108 p., Hardcover

ISBN: 978-1-4614-5485-4
