

Contents

1	Introduction	1
1.1	Solar Energy and Solar Cell	1
1.2	Physics of Photovoltaics	3
1.2.1	Photovoltaic Effect	3
1.2.2	Light Distribution in Multilayers	7
1.2.3	Drift, Diffusion and Recombination of Charge Carrier	14
1.2.4	Equivalent Circuit	17
1.3	Development of Optical Confinement Geometry Solar Cell	25
1.3.1	Several Approaches to Improve Optical Performance of Organic Photovoltaics	27
1.3.2	Architectures of Optical Confinement Geometry Solar Cell	29
1.3.3	Theoretical Models and Simulation of 3D Solar Cells	34
	References	35
2	Equivalent Circuit	39
2.1	Equivalent Circuit Model	39
2.2	Heterogeneous Illumination	45
2.3	Dependence of Light Illumination Intensity	51
	References	55
3	Optical Path in Cavity	59
3.1	Optical Path Model	59
3.1.1	Incidence and Transmission	60
3.1.2	Attenuation and Absorption (Energy)	63
3.2	Simulation Method	64
3.3	Dependence of Incident Angle and Architecture	67
	References	71

4 Spectral Response	73
4.1 Transfer Matrix Model for Optical Confinement Geometry	73
4.2 Active Layer Thickness Dependence	76
4.3 Absorption and EQE	77
References	79
5 Individual Optical Confinement Geometry Device	81
5.1 Fiber Based Solar Cell with Dip Coating ITO	81
5.1.1 Fabrication of Fiber-Based Solar Cell	83
5.1.2 Performance of Fiber-Based Solar Cell	85
5.2 ITO-Free Tube Based Solar Cell	93
5.3 Tandem OCGPV	98
5.3.1 Serial Connection	98
5.3.2 Parallel Connection	99
References	101
6 Integrated Optical Confinement Geometry Device	105
6.1 Fiber Bundles	105
6.2 Aligned Stamped Fiber Devices	105
6.2.1 Aligned Stamped Fiber (Dome) Devices	106
6.2.2 Aligned Stamped Fiber Devices (Long)	110
6.3 Cones-Based Fiber Device	111
6.4 ZnO Nano-rod Inverted Solar Cell	113
References	120
7 Hybrid Optical Confinement Geometry Device	123
7.1 Photovoltaic-Thermal Solar Energy Collectors Based on Optical Tubes	123
7.1.1 Fabrication of Tube-Based PV/T Devices	125
7.1.2 Performance of Tube-Based PV/T Devices	125
7.2 Dye-Sensitized Tube-Based Solar Cell	129
7.2.1 Fabrication of Tube-Based DSSC	130
7.2.2 Performance of Tube-Based DSSC	132
7.3 Fiber-Based Hybrid Solar Power System	134
References	137
8 Conclusion	141
8.1 Summary	141
8.2 Suggestions for the Future Investigations	141
References	144
9 Appendices	145
9.1 Instruments and Tools	145
9.1.1 Dip Coater	145
9.1.2 Rotating Deposition	145
9.2 Device Fabrication	145

9.2.1	Fiber Preparation	145
9.2.2	ITO Process	146
9.2.3	Spray Coating Polymer	148
9.2.4	ZnO Nano-rod Growth	148
9.3	Testing and Measurement	149
	References	151
	About Author	153

Three Dimensional Solar Cells Based on Optical
Confinement Geometries

Li, Y.

2013, XXX, 154 p., Hardcover

ISBN: 978-1-4614-5698-8
