

# Contents

|          |   |    |
|----------|---|----|
| <b>1</b> | <b>Syntax of First-Order Logic</b>                | 1  |
| 1.1      | First-Order Languages                             | 1  |
| 1.2      | Terms of a Language                               | 3  |
| 1.3      | Formulas of a Language                            | 6  |
| 1.4      | First-Order Theories                              | 9  |
| <b>2</b> | <b>Semantics of First-Order Languages</b>         | 15 |
| 2.1      | Structures of First-Order Languages               | 16 |
| 2.2      | Truth in a Structure                              | 17 |
| 2.3      | Models and Elementary Classes                     | 18 |
| 2.4      | Embeddings and Isomorphisms                       | 21 |
| 2.5      | Some Examples                                     | 26 |
| 2.6      | Homogeneous Structures                            | 30 |
| 2.7      | Downward Löwenheim–Skolem Theorem                 | 32 |
| 2.8      | Definability                                      | 34 |
| <b>3</b> | <b>Propositional Logic</b>                        | 41 |
| 3.1      | Syntax of Propositional Logic                     | 41 |
| 3.2      | Semantics of Propositional Logic                  | 42 |
| 3.3      | Compactness Theorem for Propositional Logic       | 45 |
| 3.4      | Proof in Propositional Logic                      | 48 |
| 3.5      | Metatheorems in Propositional Logic               | 49 |
| 3.6      | Post Tautology Theorem                            | 54 |
| <b>4</b> | <b>Completeness Theorem for First-Order Logic</b> | 57 |
| 4.1      | Proof in First-Order Logic                        | 57 |
| 4.2      | Metatheorems in First-Order Logic                 | 58 |
| 4.3      | Consistency and Completeness                      | 68 |
| 4.4      | Proof of the Completeness Theorem                 | 71 |
| 4.5      | Interpretations in a Theory                       | 76 |
| 4.6      | Extension by Definitions                          | 78 |
| 4.7      | Some Metatheorems in Arithmetic                   | 81 |

|          |  |     |
|----------|--|-----|
| <b>5</b> | <b>Model Theory</b>  | 85  |
| 5.1      | Applications of the Completeness Theorem                   | 85  |
| 5.2      | Compactness Theorem  | 86  |
| 5.3      | Upward Löwenheim–Skolem Theorem                            | 88  |
| 5.4      | Ultraproduct of Models                                     | 90  |
| 5.5      | Some Applications in Algebra                               | 93  |
| 5.6      | Extensions of Partial Elementary Maps                      | 96  |
| 5.7      | Elimination of Quantifiers                                 | 99  |
| 5.8      | Applications of Elimination of Quantifiers                 | 104 |
| 5.9      | Real Closed Fields   | 107 |
| 5.10     | Some Applications in Algebra and Geometry                  | 114 |
| 5.11     | Isolated and Omitting Types                                | 118 |
| 5.12     | Relative Types   | 122 |
| 5.13     | Prime and Atomic Models                                    | 127 |
| 5.14     | Saturated Models   | 130 |
| 5.15     | Stable Theories  | 136 |
| <b>6</b> | <b>Recursive Functions and Arithmetization of Theories</b> | 141 |
| 6.1      | Recursive Functions and Recursive Predicates               | 142 |
| 6.2      | Semirecursive Predicates                                   | 152 |
| 6.3      | Arithmetization of Theories                                | 154 |
| 6.4      | Decidable Theories   | 161 |
| <b>7</b> | <b>Representability and Incompleteness Theorems</b>        | 165 |
| 7.1      | Representability   | 165 |
| 7.2      | First Incompleteness Theorem                               | 173 |
| 7.3      | Arithmetical Sets  | 174 |
| 7.4      | Recursive Extensions of Peano Arithmetic                   | 183 |
| 7.5      | Second Incompleteness Theorem                              | 188 |
|          | <b>References</b>  | 193 |
|          | <b>Index</b>   | 195 |
