Introduction	1
1 Metric, Banach, and Hilbert Spaces	9
1.1 Preliminaries	9
1.2 Hölder's Inequality and Minkowski's Inequality	14
1.3 Metric Spaces of Functions	18
1.4 Some Relations for the Metrics in $\tilde{L}^p(\Omega)$ and ℓ^p	22
1.5 Metrics in Energy Spaces	24
1.6 Sets in a Metric Space	28
1.7 Convergence in a Metric Space	29
1.8 Completeness	30
1.9 Completion Theorem	31
1.10 Lebesgue Integrals and the Space $L^p(\Omega)$	34
1.11 Banach Spaces	39
1.12 Norms on n -Dimensional Spaces	42
1.13 Other Examples of Banach Spaces	44
1.14 Hilbert Spaces	48
1.15 Factor Spaces	50
1.16 Separability	53
1.17 Compactness, Hausdorff Criterion	58
1.18 Arzelà's Theorem and Its Applications	61
1.19 Theory of Approximation in a Normed Space	66
1.20 Decomposition Theorem, Riesz Representation	70
1.21 Linear Operators and Functionals	72
1.22 Space of Linear Continuous Operators	76
1.23 Uniform Boundedness Theorem	79
1.24 Banach–Steinhaus Principle	82
1.25 Closed Operators and the Closed Graph Theorem	83
1.26 Inverse Operator	89
1.27 Lax–Milgram Theorem	92
1.28 Open Mapping Theorem	93

1.29	Dual Spaces	94
1.30	Hahn–Banach Theorem	98
1.31	Consequences of the Hahn–Banach Theorem	102
1.32	Contraction Mapping Principle	103
1.33	Topology, Weak and Weak* Topologies	109
1.34	Weak Topology in a Normed Space X	111
1.35	Conclusion and Further Reading	113
2	Mechanics Problems from the Functional Analysis Viewpoint	115
2.1	Introduction to Sobolev Spaces	115
2.2	Operator of Imbedding	119
2.3	Some Energy Spaces	120
2.4	Generalized Solutions in Mechanics	135
2.5	Existence of Energy Solutions to Some Mechanics Problems	141
2.6	Operator Formulation of an Eigenvalue Problem	142
2.7	Problem of Elastico-Plasticity; Small Deformations	144
2.8	Bases and Complete Systems; Fourier Series	151
2.9	Weak Convergence in a Hilbert Space	157
2.10	Ritz and Bubnov–Galerkin Methods	166
2.11	Curvilinear Coordinates, Nonhomogeneous Boundary Conditions	168
2.12	Bramble–Hilbert Lemma and Its Applications	171
3	Some Spectral Problems of Mechanics	177
3.1	Introduction	177
3.2	Adjoint Operator	178
3.3	Compact Operators	185
3.4	Compact Operators in Hilbert Space	190
3.5	Functions Taking Values in a Banach Space	192
3.6	Spectrum of a Linear Operator	195
3.7	Resolvent Set of a Closed Linear Operator	199
3.8	Spectrum of a Compact Operator in Hilbert Space	201
3.9	Analytic Nature of the Resolvent of a Compact Linear Operator	209
3.10	Spectrum of a Holomorphic Compact Operator Function	211
3.11	Self-Adjoint Compact Linear Operator in Hilbert Space	213
3.12	Some Applications of Spectral Theory	219
3.13	Courant’s Minimax Principle	222
4	Elements of Nonlinear Functional Analysis	225
4.1	Fréchet and Gâteaux Derivatives	225
4.2	Liapunov–Schmidt Method	231
4.3	Critical Points of a Functional	233
4.4	Von Kármán Equations of a Plate	236
4.5	Buckling of a Thin Elastic Shell	243
4.6	Nonlinear Equilibrium Problem for an Elastic Shallow Shell	251

4.7 Degree Theory	255
4.8 Steady-State Flow of a Viscous Liquid	258
Summary of Inequalities and Imbeddings	265
A.1 Inequalities	265
A.2 Imbeddings	268
Hints for Selected Problems	269
References	299
In Memoriam: Iosif I. Vorovich	301
Index	303

Functional Analysis in Mechanics

Lebedev, L.P.; Vorovich, I.I.; Cloud, M.J.

2013, X, 310 p., Hardcover

ISBN: 978-1-4614-5867-8
