# Contents

<b>1</b>	<b>Theory of Linear Elasticity</b>	<b>1</b>
1.1	Introduction	1
	<b>Part A STRESS</b>	
1.2	Force Distributions	2
1.3	Stress	3
1.4	Equations of Motion	7
1.5	Transformation Equations for Stress	9
1.6	Principal Stresses	11
	<b>Part B STRAIN</b>	
1.7	Strain Components	20
1.8	Physical Interpretations of Strain Terms	25
1.9	The Rotation Tensor	29
1.10	Transformation Equations for Strain	31
1.11	Compatibility Equations	34
	<b>Part C GENERAL CONSIDERATIONS</b>	
1.12	Energy Considerations	37
1.13	Hooke's Law	44
1.14	Boundary-value Problems for Linear Elasticity	48
1.15	St. Venant's Principle	49
1.16	Uniqueness	50
	<b>Part D PLANE STRESS</b>	
1.17	Introduction	53
1.18	Equations for Plane Stress	53
1.19	Problem of the Cantilever Beam	57
1.20	Closure	61
	Problems	61
<b>2</b>	<b>Introduction to the Calculus of Variations</b>	<b>71</b>
2.1	Introduction	71
2.2	Examples of Simple Functionals	73
2.3	The First Variation	76

2.4	The Delta Operator . . . . .	80
2.5	First Integrals of the Euler–Lagrange Equation . . . . .	85
2.6	First Variation with Several Dependent Variables . . . . .	89
2.7	The Isoperimetric Problem . . . . .	92
2.8	Functional Constraints . . . . .	97
2.9	A Note on Boundary Conditions . . . . .	100
2.10	Functionals Involving Higher-Order Derivatives . . . . .	102
2.11	A Further Extension . . . . .	106
2.12	Closure . . . . .	108
	Problems . . . . .	109
<b>3</b>	<b>Variational Principles of Elasticity . . . . .</b>	<b>117</b>
3.1	Introduction . . . . .	117
	<b>Part A KEY VARIATIONAL PRINCIPLES</b>	
3.2	Virtual Work . . . . .	118
3.3	The Method of Total Potential Energy . . . . .	124
3.4	Complementary Virtual Work . . . . .	132
3.5	Principle of Total Complementary Energy . . . . .	136
3.6	Stationary Principles; Reissner’s Principle . . . . .	140
	<b>Part B THE CASTIGLIANO THEOREMS AND STRUCTURAL MECHANICS</b>	
3.7	Preliminary Remarks . . . . .	142
3.8	The First Castigliano Theorem . . . . .	143
3.9	The Second Castigliano Theorem . . . . .	154
3.10	Summary Contents for Parts A and B . . . . .	159
	<b>Part C QUADRATIC FUNCTIONALS</b>	
3.11	Symmetric and Positive Definite Operators . . . . .	160
3.12	Quadratic Functionals . . . . .	166
	<b>Part D APPROXIMATE METHODS</b>	
3.13	Introductory Comment . . . . .	170
3.14	The Ritz Method . . . . .	171
3.15	Galerkin’s Method . . . . .	176
3.16	Closure . . . . .	178
	Problems . . . . .	179
<b>4</b>	<b>Beams, Frames and Rings . . . . .</b>	<b>187</b>
4.1	Introduction . . . . .	187
	<b>Part A BEAMS</b>	
4.2	Technical Theory of Beams . . . . .	188
4.3	Deflection Equations for the Technical Theory of Beams . . . . .	191
4.4	Some Justifications for the Technical Theory of Beams . . . . .	196
4.5	Timoshenko Beam Theory . . . . .	200

4.6	Comments on the Ritz Method . . . . .	208
4.7	The Ritz Method for a Series Solution . . . . .	212
4.8	Use of the Reissner Principle . . . . .	218
4.9	Additional Problems in Bending of Beams . . . . .	221
<b>Part B FRAMES AND RINGS</b>		
4.10	Open Frames . . . . .	227
4.11	Closed Frames and Rings . . . . .	240
4.12	Closure . . . . .	248
	Problems . . . . .	248
<b>5</b>	<b>Torsion . . . . .</b>	<b>257</b>
5.1	Introduction . . . . .	257
5.2	Total Potential Energy; Equation for Torsion . . . . .	259
5.3	The Total Complementary Energy Functional . . . . .	261
5.4	Approximate Solutions for Linear Elastic Behavior via the Ritz Method . . . . .	266
5.5	Approximate Solutions for a Nonlinear Elastic Torsion Problem . . . . .	269
5.6	The Method of Trefftz; Upper Bound for Torsional Rigidity . . .	276
5.7	The Method of Kantorovich . . . . .	283
5.8	Extended Kantorovich Method . . . . .	289
5.9	Closure . . . . .	293
	Problems . . . . .	295
<b>6</b>	<b>Classical Theory of Plates . . . . .</b>	<b>299</b>
6.1	Introduction . . . . .	299
6.2	Kinematics of the Deformation of Plates . . . . .	299
6.3	Stress Resultant Intensity Functions and the Equations of Equilibrium . . . . .	303
6.4	Minimum Total Potential Energy Approach . . . . .	309
6.5	Principle of Virtual Work; Rectangular Plates . . . . .	317
6.6	A Note on the Validity of classical Plate Theory . . . . .	321
6.7	Examples From Classical Plate Theory; Simply-supported Rectangular Plates . . . . .	327
6.8	Rectangular plates; Lévy's Method . . . . .	331
6.9	The Clamped Rectangular Plate; Approximate Solutions . . . .	336
	6.9.1 Ritz Method . . . . .	337
	6.9.2 Galerkin's Method . . . . .	341
	6.9.3 Kantorovich's Method . . . . .	344
6.10	Elliptic and Circular Plates . . . . .	346
6.11	Skewed Plate Problem . . . . .	351
6.12	Improved Theory—Axisymmetric Circular Plates . . . . .	354
6.13	Closure . . . . .	363
	Problems . . . . .	364

<b>7</b>	<b>Dynamics of Beams and Plates</b>	373
7.1	Introduction	373
7.2	Hamilton's Principle	373
	<b>Part A BEAMS</b>	
7.3	Equations of Motion for Vibrating Beams	376
7.4	Free Vibrations of a Simply-Supported Beam	380
7.5	Rayleigh's Method for Beams	385
7.6	Rayleigh–Ritz Method for Beams	389
7.7	The Timoshenko Beam	394
	<b>Part B PLATES</b>	
7.8	Equations of Motion for Plates	403
7.9	Free Vibrations of a Simply-Supported Plate	405
7.10	Rayleigh's Method for Plates	408
7.11	Rayleigh–Ritz Method for Plates	411
7.12	Transverse Shear and Rotatory Inertia—Mindlin Plate Theory	417
	<b>Part C GENERAL CONSIDERATIONS</b>	
7.13	The Eigenfunction–Eigenvalue Problem Restated	429
7.14	The Rayleigh Quotient in Terms of Operators	431
7.15	Stationary Values of the Rayleigh Quotient	432
7.16	Rayleigh–Ritz Method Re-Examined	435
7.17	Maximum–Minimum Principle	439
7.18	Justification of the Estimation from Above Assertion of the Rayleigh–Ritz Method	441
7.19	Closure	442
	Problems	443
<b>8</b>	<b>Nonlinear Elasticity</b>	449
8.1	Introduction	449
8.2	Kinematics of Points and Line Segments	450
8.3	Interpretation of Strain and Rotation Terms	455
8.4	Volume Change During Deformation	457
8.5	Changes of Area Elements During Large Deformation	459
8.6	Simplification of Strain	462
8.7	Stress and The Equations of Equilibrium	464
8.8	Simplification of Equations	470
8.9	Principle of Virtual Work	472
8.10	Total Potential Energy	475
8.11	Von Kármán Plate Theory	478
8.12	An Example	488

<b>9 Elastic Stability</b>	493
9.1 Introduction	493
<b>Part A STABILITY OF RIGID BODY SYSTEMS</b>	
9.2 Stability	493
9.3 Rigid Body Problems	494
<b>Part B ELASTIC STABILITY OF COLUMNS</b>	
9.4 The Euler Load; Equilibrium Method	500
9.5 Energy Methods	507
9.6 Imperfection Analysis	510
9.7 The Kinetic Method	513
9.8 General Remarks	515
9.9 The Elastica	516
9.10 An Intermediate Theory	521
9.11 A Note on Koiter's Theory of Elastic Stability	523
<b>Part C ELASTIC STABILITY OF PLATES</b>	
9.12 The Buckling Equation for Rectangular Plates	530
9.13 The Equilibrium Method—An Example	535
9.14 The Rectangular Plate Via the Energy Method	538
9.15 The Circular Plate Via the Energy Method	538
<b>Part D APPROXIMATION METHODS</b>	
9.16 Comment	543
9.17 The Rayleigh Quotient for Beam-Columns	543
9.18 The Rayleigh and the Rayleigh–Ritz Methods Applied to Columns	544
9.19 Rayleigh Quotient for Rectangular Plates	546
9.20 The Kantorovich Method	548
Problems	553
<b>10 Finite Element Analysis: Preliminaries and Overview</b>	559
10.1 Matrix Forms of the Equations of Elasticity and Key Variational Principles	560
10.1.1 Matrix Representations of the Equations of Isotropic Linear Elasticity	560
10.1.2 Matrix Representation of the Key Variational Principles	563
10.2 Strong and Weak Forms of Elasticity Problems	566
10.2.1 Strong Form to Weak Form	568
10.2.2 Weak Form to Strong Form	570
10.3 A Formal Statement of Finite Element Analysis in Elasticity	571
10.3.1 Finite Element Analysis of Elastic Bodies and Structures	572
10.3.2 The Direct Stiffness Method	577

10.4	Finite Elements: Degrees of Freedom, Shapes, and Interpolation . . . . .	578
10.4.1	Polynomial-Based Approximations . . . . .	580
10.4.2	Interpolation Across Finite Elements . . . . .	581
10.4.3	Finite Element Shapes . . . . .	584
10.5	Closure . . . . .	586
	Problems . . . . .	588
<b>11</b>	<b>Finite Element Applications: Trusses and Beams . . . . .</b>	<b>591</b>
11.1	Truss Forces and Deflections and the Direct Stiffness Method . . . . .	591
11.1.1	Analyzing an Indeterminate Truss with Castigliano's Second Theorem . . . . .	592
11.1.2	Element Stiffness Matrix for a Truss Finite Element . . . . .	596
11.1.3	Truss Element Stiffness in Global Coordinates . . . . .	599
11.1.4	Assembled Stiffness of a Truss System . . . . .	602
11.1.5	Solving the Assembled (Matrix) Equilibrium Equation . . . . .	605
11.1.6	Determining the Bar Forces in the Truss . . . . .	607
11.1.7	Remarks on the Direct Stiffness Methods for Trusses . . . . .	609
11.2	Applying FEA to Axially Loaded Bars . . . . .	611
11.2.1	Total Potential Energy and Element Equilibrium for Bars . . . . .	612
11.2.2	FEA of a Centrally Loaded Bar . . . . .	613
11.2.3	Solving the FEA Assembled Equilibrium Equations . . . . .	617
11.3	Finite Element Analysis for Beams in Bending . . . . .	618
11.3.1	Displacements and Shape Functions for Beams in Bending . . . . .	618
11.3.2	Total Potential Energy and Element Equilibrium for Beam Elements . . . . .	619
11.3.3	Assembling Beam Elements to Model Beams . . . . .	622
11.4	Closure . . . . .	631
	Problems . . . . .	632
	<b>Appendix I Cartesian Tensors . . . . .</b>	<b>635</b>
I.1	Introduction . . . . .	635
I.2	Vectors and Tensors . . . . .	635
I.3	Transformation of Coordinates and Introduction to Index Notation . . . . .	637
I.4	Interpretation of the Free Indices: Kronecker Delta . . . . .	640
I.5	Operations with Indices . . . . .	642
I.6	Scalars and Vectors . . . . .	644

---

I.7	Tensors: Symmetry and Skew-symmetry . . . . .	648
I.8	Vector Operations Using Tensor Notation: the Alternating Tensor . . . . .	653
I.9	Gauss' Theorem . . . . .	657
I.10	Green's Formula . . . . .	660
I.11	Closure . . . . .	662
	Problems . . . . .	662
<b>Appendix II Rotation Tensor for a Deforming Element . . . . .</b>		<b>667</b>
<b>Appendix III Integration of <math>\int_0^1 \xi^a [1 - \xi^g]^h d\xi</math> . . . . .</b>		<b>670</b>
<b>Appendix IV To Show that Lagrange Multipliers are Zero for Development of the Rayleigh–Ritz Method . . . . .</b>		<b>672</b>
<b>Bibliography . . . . .</b>		<b>675</b>
<b>Index . . . . .</b>		<b>679</b>

Solid Mechanics

A Variational Approach, Augmented Edition

Dym, C.L.; Shames, I.H.

2013, XVII, 685 p., Hardcover

ISBN: 978-1-4614-6033-6
