1	The Water-Wave Equations: From Zakharov to Euler	1
	Thomas Alazard, Nicolas Burq, and Claude Zuily	
1.1	Introduction	1
1.2	Low Regularity Cauchy Theory	4
1.3	From Zakharov to Euler	6
1.3.1	The Variational Theory	6
1.3.2	The Main Result	7
1.3.3	Straightening the Free Boundary	8
1.3.4	The Dirichlet-Neumann Operator	9
1.3.5	Preliminaries	10
1.3.6	The Regularity Results	12
1.3.7	Proof of the Lemmas	13
	References	20
2	On the Characterization of Pseudodifferential Operators (Old and New)	21
	Jean-Michel Bony	
2.1	Introduction	21
2.2	Weyl–Hörmander Calculus	22
2.2.1	Admissible Metrics	23
2.2.2	Symbolic Calculus	24
2.2.3	Can One Use Only Metrics Without Symplectic Eccentricity?	25
2.3	Characterization of Pseudodifferential Operators	26
2.3.1	Geodesic Temperance	26
2.3.2	Characterization	27
2.3.3	Functional Calculus	29
2.4	Sufficient Conditions for the Geodesic Temperance	30
2.4.1	Proof of Theorem 2.5 (i)	31
2.4.2	Proof of Theorem 2.5 (ii)	33
	References	34

3	Improved Multipolar Hardy Inequalities	35
	Cristian Cazacu and Enrique Zuazua	
3.1	Introduction	36
3.2	Preliminaries: Some Strategies to Prove Hardy-Type Inequalities	39
3.3	Multipolar Hardy Inequalities	40
3.4	New Bounds for the Bipolar Hardy Inequality in Bounded Domains	46
3.5	Further Comments and Open Problems	50
	References	51
4	The Role of Spectral Anisotropy in the Resolution of the Three-Dimensional Navier–Stokes Equations	53
	Jean-Yves Chemin, Isabelle Gallagher, and Chloé Mullaert	
4.1	Introduction	53
4.2	Preliminaries: Notation and Anisotropic Function Spaces	57
4.3	Proof of Theorem 4.3	59
4.3.1	Decomposition of the Initial Data	59
4.3.2	Construction of an Approximate Solution and End of the Proof of Theorem 4.3	60
4.3.3	Proof of the Estimates on the Approximate Solution (Lemma 4.1)	61
4.3.4	Proof of the Estimates on the Remainder (Lemma 4.2)	62
4.4	Estimates on the Linear Transport-Diffusion Equation	68
	References	79
5	Schrödinger Equations in Modulation Spaces	81
	Elena Cordero, Fabio Nicola, and Luigi Rodino	
5.1	Introduction	81
5.2	Modulation Spaces and Time–Frequency Analysis	84
5.2.1	Modulation Spaces	85
5.2.2	Gabor Frames [23]	88
5.3	Classical Fourier Integral Operators in $\mathbb{R}^d$	89
5.4	Boundedness of FIOs on Modulation Spaces and Wiener Amalgam Spaces	91
5.5	Other Results	96
	References	97
6	New Maximal Regularity Results for the Heat Equation in Exterior Domains, and Applications	101
	Raphaël Danchin and Piotr Bogusław Mucha	
6.1	Introduction	101
6.2	Tools	104
6.2.1	Besov Spaces on the Whole Space	104
6.2.2	Besov Spaces on Domains	106

6.3	A Priori Estimates for the Heat Equation	108
6.3.1	The Heat Equation in the Half-Space	109
6.3.2	The Exterior Domain Case	110
6.3.3	The Bounded Domain Case	121
6.4	Applications	122
	References	127
7	Cauchy Problem for Some 2×2 Hyperbolic Systems of Pseudo-differential Equations with Nondiagonalisable Principal Part	129
	Todor Gramchev and Michael Ruzhansky	
7.1	Introduction	129
7.2	Reduction and Well-Posedness in Anisotropic Sobolev Spaces	131
7.3	Cauchy Problem for 2×2 Hyperbolic Pseudo-differential Systems	133
7.4	Final Remarks	143
	References	144
8	Scattering Problem for Quadratic Nonlinear Klein–Gordon Equation in 2D	147
	Nakao Hayashi and Pavel I. Naumkin	
8.1	Introduction	147
8.2	Preliminary Estimates	151
8.3	Proof of Theorem 8.1	151
8.4	Proof of Theorem 8.2	155
	References	158
9	Global Solutions to the 3-D Incompressible Inhomogeneous Navier–Stokes System with Rough Density	159
	Jingchi Huang, Marius Paicu, and Ping Zhang	
9.1	Introduction	160
9.2	The Estimate of the Transport Equation	165
9.3	The Estimate of the Pressure	167
9.4	The Proof of Theorem 9.3	173
9.4.1	The Estimate of u^h	173
9.4.2	The Estimate of u^3	176
9.4.3	The Proof of Theorem 9.3	177
	References	179
10	The Cauchy Problem for the Euler–Poisson System and Derivation of the Zakharov–Kuznetsov Equation	181
	David Lannes, Felipe Linares, and Jean-Claude Saut	
10.1	Introduction	182
10.1.1	General Setting	182
10.1.2	Organization of the Paper	185
10.1.3	Notations	185

10.2	The Cauchy Problem for the Euler–Poisson System	186
10.2.1	Solving the Elliptic Part	186
10.2.2	Local Well-Posedness	190
10.3	The Long-Wave Limit of the Euler–Poisson System	191
10.3.1	The Cauchy Problem Revisited	192
10.3.2	The ZK Approximation to the Euler–Poisson System	197
10.3.3	Justification of the Zakharov–Kuznetsov Approximation	202
10.4	The Euler–Poisson System with Isothermal Pressure	205
10.4.1	The Cauchy Problem for the Euler–Poisson System with Isothermal Pressure	205
10.4.2	Derivation of a Zakharov–Kuznetsov Equation in Presence of Isothermal Pressure	208
10.4.3	Justification of the Zakharov–Kuznetsov Approximation	211
	References	212
11	L^1 Estimates for Oscillating Integrals Related to Structural Damped Wave Models	215
	Takashi Narazaki and Michael Reissig	
11.1	Introduction	215
11.2	L^p Estimates for a Model Oscillating Integrals	218
11.3	The General Case $\sigma = \frac{1}{2}$	224
11.4	The Case $\sigma \in (0, 1/2)$	226
11.4.1	L^1 Estimates for Small Frequencies	226
11.4.2	L^1 Estimates for Large Frequencies	234
11.4.3	L^∞ Estimates	240
11.4.4	$L^p - L^q$ Estimates not Necessarily on the Conjugate Line	241
11.5	The Case $\sigma \in (1/2, 1)$	242
11.5.1	L^1 Estimates for Small Frequencies	242
11.5.2	L^1 Estimates for Large Frequencies	247
11.5.3	L^∞ Estimates	253
11.5.4	$L^p - L^q$ Estimates not Necessarily on the Conjugate Line	253
	Appendix	255
	References	258
