

Contents

Part I Introduction

1 Concepts and Definitions	3
1.1 Introduction	3
1.2 Scales	4
1.3 Levels	8
1.4 Habitat Selection	9
1.5 Movement, Dispersal, and Migration	11

Part II Levels within Species

2 Distribution of Individuals	17
2.1 Introduction	17
2.2 Movements	17
2.2.1 Ethology of Movement	18
2.2.2 Cognitive Aspects of Movement	20
2.2.3 Movement as an Adaptation	22
2.2.4 Statistical Description of Movement	24
2.3 Home Ranges	25
2.4 Site Suitability Models	27
2.5 Patch Models of Foraging Theory	30
2.5.1 Introduction: Foraging Theory and Foraging Behaviour	30
2.5.2 Types of Patches	31
2.5.3 Marginal Value Theorem	31
2.5.4 Patch Selection	35
2.5.5 Patch and Prey Selection	37
2.6 Foraging in Heterogeneous Habitats by Plants	38
2.7 Balancing Demands and Use of Refuges	39
2.8 Distribution at Equilibrium: The Matching Rule	41

3	Distribution of Aggregations	43
3.1	Introduction	43
3.2	Site Suitability Models	44
3.3	Individual-Based Models	45
3.4	Ideal Free Distribution	48
3.4.1	Habitat Selection and Intraspecific Competition	48
3.4.2	Fretwell and Lucas' Model	49
3.4.3	Ideal Free Distribution with Interference	52
3.4.4	Ideal Free Distribution with Unequal Competitors	52
3.4.5	Other Ideal Free Models	53
3.5	Distribution at Equilibrium: The Habitat-Matching Rule	54
4	Distribution of Societies	57
4.1	Introduction	57
4.2	Dispersion Patterns	58
4.3	Grouping	59
4.3.1	Protection Against Predators	60
4.3.2	Finding Resources	62
4.3.3	Changing Local Environment	63
4.4	Defending Territories	63
4.5	Habitat Use and Reproductive Systems	64
4.6	Distribution of Groups: Ideal Free Approach with Allée Effect	67
4.7	Distribution of Territories: Ideal Despotic Distribution	71
4.8	Mating Systems and the Ideal Free Approach	72
4.8.1	Distribution of Reproductive Birds: The Polygyny-Threshold Model	72
4.8.2	Distribution of Mammals: The Effect of Sexual Harassment	73
5	Distribution of Subpopulations	77
5.1	Introduction	77
5.2	Metapopulations	78
5.3	Source–Sinks	81
5.4	Fitness Maximisers, Foraging Behaviour, and Landscape Distribution	83
5.5	Individual-Based Models and Spatially Structured Populations	86
5.6	Pattern-Oriented Approach of Landscape Ecology	87
5.7	Cognitive Constraints on Landscape Utilisation	90
6	Distribution of Populations	93
6.1	Introduction	93
6.2	Distribution of Close Populations	95

6.3	Distribution of Spatially Structured Populations	97
6.4	Role of Behavioural Mechanisms in Distribution of Populations	98
7	Distribution of Species	101
7.1	Introduction.....	101
7.2	Species Distribution Models	102
7.3	Internal Structure of Biogeographical Ranges	108
7.4	Individuals, Physiological Mechanisms, and Species Distribution	110
7.5	Behavioural Adaptations and Species Distribution	112

Part III Levels Outside Species

8	Distribution of Species Assemblages	117
8.1	Introduction.....	117
8.2	Isoleg Model: Distribution of Guilds Composed of Fitness Maximisers	118
8.3	Macroecology	121
8.4	Species Distribution Models Applied to Species Ensembles.....	124
9	Distribution of Genes	127
9.1	Introduction.....	127
9.2	Biological and Environmental Features Leading to Population Genetic Structure	128
9.3	Geographical Genetic Patterns Observed in Eukaryotes	129
9.3.1	Random Patterns	130
9.3.2	Clines	130
9.3.3	Ecotypes	131
9.3.4	Isolation by Distance.....	133
9.3.5	Stepping Stone	133
9.3.6	Discontinuities to Gene Flow.....	135
9.3.7	Metapopulations.....	136
9.3.8	Source–Sinks.....	137
9.3.9	The Central–Marginal Model.....	137
9.4	Distribution of Genes in Bacterial Communities.....	138
9.4.1	Mechanisms of Lateral Genetic Transfer in the Bacterial World	138
9.4.2	Role of Class 1 Integron Genes in Antibiotic Resistance.....	138
9.4.3	Pattern of Distribution of Class 1 Integron Genes at Different Ecological Scales.....	140

Part IV Applications

10	Distribution Ecology in Conservation Biology	145
10.1	Introduction.....	145
10.2	Environmental Challenges	145
10.3	Individual (and Gene) Distribution and Conservation Biology.....	147
10.4	Aggregation Distributions and Conservation Biology	149
10.5	Metapopulations, Source–Sinks, and Conservation Biology.....	156
10.6	Landscape Ecology, Pattern-Based Models, and Conservation Biology.....	156
10.7	Species Distribution Models and Conservation Biology	158
10.8	Ensemble Distributions and Conservation Biology	160
11	Distribution Ecology in Animal Production	163
11.1	Introduction.....	163
11.2	Foraging Behaviour and Distribution of Livestock.....	163
11.3	Landscape Predictors of Livestock Distribution	166
11.4	Quantitative Analyses of Livestock Distribution	167
11.5	Species Distribution Models Applied to Livestock Management.....	168
11.6	Species Assemblage Distribution and Livestock Management.....	172

Part V Conclusions and Prospects

12	Final Remarks	177
12.1	Introduction.....	177
12.2	Criticisms of Models.....	178
12.3	Molecular Versus Molar Models and Processes Versus Associations	179
12.4	Amount of Resources Versus Patch Arrangement	180
12.5	Organisation Levels and Ecological Scales Revisited	181
12.6	Equilibrium and the Generalised Matching Law	182
12.7	Holistic or Reductionist Future of Distribution Ecology	186
References.....		189
Index.....		211

Distribution Ecology

From Individual Habitat Use to Species Biogeographical
Range
