<b>Preface</b> .....	v
<b>1 The Exponential Distribution and the Poisson Process</b> .....	1
1.1 Introduction.....	1
1.2 The Density, the Distribution, the Tail, and the Hazard Functions .....	2
1.2.1 The Hazard Function and the Memoryless Property (Version 1) .....	3
1.2.2 The Memoryless Property (Version 2).....	4
1.2.3 The Memoryless Property (Version 3).....	5
1.2.4 The Least Among Exponential Random Variables.....	6
1.2.5 The Erlang Distribution .....	8
1.2.6 The Hyperexponential Distribution .....	9
1.2.7 A Mixture of Erlang Distributions .....	9
1.3 The Poisson Process.....	10
1.3.1 When Have They Actually Arrived?.....	11
1.3.2 Thinning and Superpositioning of Poisson Processes ....	13
1.4 Transforms.....	14
1.4.1 The z-Transform .....	14
1.4.2 The Laplace-Stieltjes Transform.....	16
1.5 Exercises.....	17
<b>2 Introduction to Renewal Theory</b> .....	21
2.1 Introduction.....	21
2.2 Main Renewal Results .....	22
2.2.1 The Length Bias Distribution and the Inspection Paradox .....	22
2.2.2 The Age and the Residual Distributions .....	24
2.2.3 The Memoryless Property (Versions 4 and 5) .....	28
2.3 An Alternative Approach .....	31
2.4 A Note on the Discrete Version.....	32
2.5 Exercises.....	34

<b>3</b>	<b>Introduction to Markov Chains</b>	37
3.1	Introduction	37
3.2	Some Properties of Markov Chains	38
3.3	Time Homogeneity	39
3.4	State Classification	40
3.5	Transient and Recurrent Classes	41
3.6	Periodicity	42
3.7	Limit Probabilities and the Ergodic Theory	42
3.7.1	Computing the Limit Probabilities	44
3.8	The Time-Reversed Process and Reversible Processes	44
3.9	Discrete Renewal Processes Revisited	46
3.10	Transient Matrices	47
3.11	Short-Circuiting States	48
3.12	Exercises	50
<b>4</b>	<b>From Single Server Queues to M/G/1</b>	51
4.1	Introduction	51
4.2	Why Do Queues Exist at All?	52
4.3	Why Queues Are Long?	52
4.4	Queueing Disciplines	53
4.5	Basics in Single Server Queues	54
4.5.1	The Utilization Level	54
4.5.2	Little's Law	54
4.5.3	Residual Service Times	56
4.5.4	The Virtual Waiting Time	57
4.5.5	Arrival and Departure Instants	59
4.6	ASTA and the Khintchine–Pollaczek Formula	59
4.7	The M/G/1 Model	60
4.7.1	Examples	61
4.7.2	The Busy Period of an M/G/1 Queue	62
4.7.3	Stand-By Customers and Externalities	64
4.7.4	M/G/1 Queues with Vacations	65
4.8	The G/G/1 Queue	66
4.8.1	Lindley's Equation	67
4.9	Exercises	68
<b>5</b>	<b>Priorities and Scheduling in M/G/1</b>	71
5.1	An M/G/1 Queue with Priorities	71
5.1.1	Conservation Laws	71
5.1.2	The Optimality of the $C\mu$ Rule	72
5.1.3	Waiting Times in Priority Queues	73
5.1.4	Shortest Job First (SJF)	75
5.1.5	Preemptive Priority	76
5.2	Exercises	78

<b>6</b>	<b>M/G/1 Queues Using Markov Chains and LSTs</b>	81
6.1	Introduction	81
6.2	The Markov Chain Underlying the Departure Process	82
6.2.1	The Limit Probabilities	83
6.3	The Distribution of Time in the System	86
6.3.1	Arrival, Departure, and Random Instants	88
6.3.2	Observable Queues	89
6.4	Busy Period in an M/G/1 Queue Revisited	90
6.5	A Final Word	92
6.6	Exercises	93
<b>7</b>	<b>The G/M/1 Queueing System</b>	99
7.1	Introduction and Modeling	99
7.2	The Stationary Distribution at Arrival Instants	100
7.2.1	The Balance Equations and Their Solution	100
7.2.2	Exponential Waiting Times	103
7.2.3	The Queue Length at Random Times	103
7.3	Exercises	104
<b>8</b>	<b>Continuous-Time Markov Chains and Memoryless Queues</b>	107
8.1	The Model	107
8.2	Examples	108
8.3	The Limit Probabilities	118
8.3.1	The Limit Probabilities and the Balance Equations	119
8.3.2	The Embedded Process	124
8.3.3	Uniformization	124
8.3.4	The Cut Balancing Theorem	124
8.4	The Time-Reversed Process	128
8.4.1	A Condition on the Limit Probabilities	128
8.4.2	The Time-Reversed Process Is Markovian	130
8.4.3	Time-Reversible Processes	131
8.4.4	Poisson Processes Stemming from Markov Processes	132
8.5	Exercises	133
<b>9</b>	<b>Open Networks of Exponential Queues</b>	139
9.1	Open Networks of Exponential Queues: Model and Limit Probabilities	139
9.1.1	Partial Balancedness	143
9.2	Processes in Open Networks of Memoryless Queues	143
9.3	Sojourn Times in Open Network of Queues	147
9.3.1	The Unconditional Mean Waiting Time	147
9.3.2	The Arrival Theorem	147
9.4	Generalizations	149
9.5	Exercises	149

<b>10</b>	<b>Closed Networks of Exponential Queues</b>	151
10.1	The Model and the Limit Probabilities	151
10.1.1	Partial Balancedness	154
10.2	The Convolution Algorithm	155
10.3	Short-Circuiting Stations	158
10.4	The Arrival Theorem	159
10.5	Mean Value Analysis (MVA) for Closed Networks of Queues	160
10.5.1	The Mean Value Analysis (MVA) Algorithm	161
10.6	Generalizations	162
10.7	Exercises	163
<b>11</b>	<b>Insensitivity and Product-Form Queueing Models</b>	165
11.1	Introduction	165
11.2	Symmetric Queues	165
11.2.1	Examples	166
11.2.2	Product Form and Insensitivity	167
11.3	One-Chance Queues	172
11.3.1	Examples	173
11.3.2	Product Form and Insensitivity	173
11.3.3	Proof of Theorem 11.5	175
11.4	BCMP Network of Queues	178
11.5	Exercises	178
<b>12</b>	<b>Two-Dimensional Markov Processes and Their Applications to Memoryless Queues</b>	181
12.1	Model Description	181
12.2	Examples	182
12.2.1	Example 1: The $M/Er/1$ Model Revisited	182
12.2.2	Example 2: The Two Shortest Truncated Symmetric Queues	185
12.2.3	Example 3: Two Servers: When Customers Join the First When Its Queue Is Not Too Long	193
12.2.4	Example 4: Game with Tokens	195
12.3	The Balance Equations	197
12.3.1	Example 1 (Cont.)	198
12.3.2	Example 2 (Cont.)	199
12.3.3	Example 3 (Cont.)	199
12.3.4	Example 4 (Cont.)	200
12.4	Solving for the Limit Probabilities	201
12.4.1	Example 1 (Cont.)	203
12.4.2	Example 3 (Cont.)	204
12.4.3	Example 4 (Cont.)	210
12.5	The General Case	214
12.6	Exercises	215
