1	The Design of Manufacturing Systems to Cope with Variability	1
	John A. Buzacott	
1.1	Introduction	1
1.2	Manufacturing Needs Dedicated Problem Solvers	2
1.3	Manufacturing Systems	3
1.3.1	Job Shops	4
1.3.2	Flow Lines	10
1.4	Improving on the Job Shop and the Flow Line	16
1.4.1	Flexible Manufacturing Systems (FMS)	17
1.4.2	Central Storage and Dispatch	20
1.4.3	Cells and Teams	22
1.5	Conclusions	25
	References	27
2	Modeling Automated Warehouses Using Semi-Open Queueing Networks	29
	Xiao Cai, Sunderesh S. Heragu, and Yang Liu	
2.1	Introduction	29
2.2	SOQN Notation	33
2.3	Single-Class SOQN with Two Stages of Exponential Servers and Poisson Arrivals	33
2.3.1	State Space Solution	33
2.3.2	Matrix Geometric Method Solution	37
2.3.3	Numerical Example 1	41
2.4	Single-Class SOQN with Multiple Stages of Exponential Servers and Poisson Arrivals	42
2.4.1	Decomposition-Aggregation Method	42
2.4.2	Numerical Example 2	43
2.5	Phase-Type Distribution	44
2.5.1	Definition	44
2.5.2	Closure Properties and Kronecker Product	47

2.6	Single-Class SOQN with Two Stages of General Servers and General Arrival	51
2.6.1	State Space Analysis	51
2.6.2	Numerical Example 3	54
2.6.3	Multiple Servers	55
2.6.4	Numerical Example 4	59
2.7	Single-Class SOQN with Multiple Stages of General Servers and General Arrival	60
2.7.1	Modified Decomposition-Aggregation Method	60
2.7.2	Numerical Example 5	60
2.8	Multi-Class SOQN with Multiple Stages of General Servers and General Arrivals	62
2.8.1	Aggregation Method	62
2.8.2	Numerical Example 6	64
2.9	Conclusions	67
	References	70
3	Exact Analysis of Discrete Part Production Lines: The Markovian Queueing Network and the Stochastic Automata Networks Formalisms	73
	P. Fernandes, M.E.J. O'Kelly, C.T. Papadopoulos, and A. Sales	
3.1	Introduction and Literature Review	73
3.2	The Markovian Formalism	76
3.2.1	The Algorithm for the Generation of the Conservative Matrix A for K -Station Reliable Exponential Production Lines with Inter-station Buffers	80
3.2.2	The Queueing Network Model of a Three-Station Reliable Exponential Production Line	87
3.3	The Stochastic Automata Networks Formalism (SAN)	90
3.3.1	Definitions and Properties of Classical Tensor Algebra (CTA) and Generalized Tensor Algebra (GTA)	91
3.3.2	Definition of Kronecker Descriptors Using Tensor Algebra	96
3.3.3	The Equivalent SAN Model to the Queueing Network Model of the Three-Station Line	97
3.4	Software Tools and Results	102
3.4.1	Numerical Results	103
3.5	Conclusions	104
	References	110
4	Models of Leveling for Lean Manufacturing Systems	115
	Kai Furmans and Martin Veit	
4.1	Stochastic Models for Lean Manufacturing Systems	115
4.2	System Description and Single Stage Model	118
4.2.1	Performance Measure Calculation by Variable Interval Model	118

4.2.2	Performance Measure Calculation by Fixed Interval Model	120
4.3	Multi-stage Fixed Interval Models	122
4.3.1	Simplified Approach	123
4.3.2	Iterative Approximation	124
4.3.3	Results	133
4.4	An Application and Some Insights	133
4.5	Summary	137
	References	137
5	Value of Advance Demand Information in Production and Inventory Systems with Shared Resources	139
	Fikri Karaesmen	
5.1	Introduction	139
5.2	Literature Review	140
5.2.1	Modeling ADI	140
5.2.2	Uncapacitated Inventory Systems	142
5.2.3	Production/Inventory Systems	143
5.3	Supply Chain Structures and Resource Sharing	144
5.4	A Static Model: Newsvendor Framework	145
5.4.1	No Inventory Sharing	146
5.5	Inventory Systems with Exogenous Lead Times	150
5.5.1	No Inventory Sharing	151
5.5.2	Inventory Sharing	153
5.6	Capacitated Systems	155
5.6.1	No Inventory and Capacity Sharing	155
5.6.2	With Inventory and Capacity Sharing	158
5.7	Summary and Discussion	160
5.8	Conclusions	162
	References	162
6	Production Systems Engineering: Review and Recent Developments	167
	Jingshan Li, Semyon M. Meerkov, and Liang Zhang	
6.1	Introduction	167
6.2	Production Systems and Performance Metrics Addressed in PSE	168
6.2.1	Block Diagrams	168
6.2.2	Parameters of Machines and Buffers	171
6.2.3	Performance Metrics	171
6.3	Performance Analysis	172
6.3.1	Performance Evaluation Using Aggregation Approach ..	172
6.3.2	Performance Evaluation Using PSE Toolbox	176
6.4	Fundamental Laws of PSE	177
6.4.1	First Uptime vs. Downtime Law	177
6.4.2	Second Uptime vs. Downtime Law	178
6.4.3	Reversibility	181

6.4.4	Monotonicity	182
6.4.5	Improvability	184
6.5	Bottleneck	187
6.5.1	Definition	187
6.5.2	Identification	188
6.5.3	Buffering Potency	190
6.6	Leanness	191
6.6.1	Definition	191
6.6.2	Calculations	192
6.7	Production Lead Time	194
6.7.1	Model and Problems	195
6.7.2	Identical Machines Case	195
6.7.3	Non-identical Machines Case	198
6.8	Re-entrant Lines	199
6.8.1	Model, Equations, and Problems	200
6.8.2	Equilibria and Stability	202
6.8.3	Transients	203
6.9	Conclusion and Future Work	206
	References	208
7	Production Release Control: Paced, WIP-Based or Demand-Driven? Revisiting the Push/Pull and Make-to-Order/ Make-to-Stock Distinctions	211
	George Liberopoulos	
7.1	Introduction	211
7.2	Production Control in the Absence of Demands	215
7.2.1	System Without WIP Control	215
7.2.2	Systems with WIP Control	217
7.3	Production Control in the Presence of Demands	223
7.3.1	System Without WIP Control in the Presence of Demands	223
7.3.2	Systems with WIP Control in the Presence of Demands ..	228
7.4	Production Control with Advance Demand Information and Forecasts	238
7.4.1	Systems with Advance Demand Information	238
7.4.2	Production Control Systems with Forecasts	241
7.5	Conclusions	244
	References	245
8	Queueing Network Models of Material Handling and Transportation Systems	249
	J. MacGregor Smith	
8.1	Motivation	249
8.1.1	Problem	249
8.1.2	Outline of Chapter	250

8.2	Problem Background	250
8.2.1	Transporters	253
8.2.2	Conveyors	253
8.2.3	Restricted Area units	255
8.2.4	Literature Review	255
8.2.5	Material Systems	255
8.2.6	Material Handling Systems	256
8.3	Mathematical Models	257
8.3.1	Notation	258
8.3.2	State Dependent Models	259
8.3.3	$M/G/c/c$ Probability Distribution	261
8.4	Product Form Algorithms	264
8.4.1	Product Form Networks	265
8.4.2	Open Networks	265
8.4.3	Closed Networks	271
8.4.4	Engset Loss Networks	272
8.4.5	Mixed Networks	274
8.5	Optimization Problems	277
8.5.1	Optimal Topology Problems (OTOP)	278
8.5.2	Optimal Routing Problems (ORTE)	279
8.5.3	Optimal Resource Allocation Problems (ORAP)	279
8.6	Summary and Conclusions	283
	References	283
9	Modeling and Analysis of Output Variability in Discrete Material Flow Production Systems	287
	Bariş Tan	
9.1	Introduction	287
9.1.1	Literature Review	288
9.2	Performance Measures	291
9.2.1	Number of Parts Produced	291
9.2.2	Time to Produce a Given Order	291
9.2.3	Probability of Completing an Order on Time	292
9.2.4	State-Space Model	293
9.3	Asymptotic Variance Rate of Output: V	294
9.3.1	Asymptotic Variance Rate of Output from Production Lines with No Interstation Buffers	294
9.3.2	Asymptotic Variance Rate of Output from Production Systems with Finite Buffers	298
9.4	Variance of the Number of Products Produced in a Given Time Period: $\text{Var}[N(t)]$	302
9.4.1	Determining the Variance Rate of the Output from the Probability Matrix	303
9.4.2	Variance Rate of the Output from a Two-Machine Line with a Finite Buffer	303

9.5	Distribution of the Number of Products Produced in a Given Time Period: $P[N(t) = n]$	305
9.6	Conclusions	308
