Introduction	xi
1 Introduction of q-Calculus	1
1.1 Notations and Definitions in q -Calculus	1
1.2 q -Derivative	3
1.3 q -Series Expansions.....	5
1.4 Generating Functions	8
1.4.1 Generating Function for q -Bernstein Basis.....	9
1.4.2 Generating Function for q -MKZ	10
1.4.3 Generating Function for q -Beta Basis	10
1.5 q -Integral	11
2 q-Discrete Operators and Their Results	15
2.1 q -Bernstein Operators.....	15
2.1.1 Introduction	16
2.1.2 Bernstein Polynomials.....	16
2.1.3 Convergence	18
2.1.4 Voronovskaya's Theorem.....	20
2.2 q -Szász Operators	22
2.2.1 Introduction	23
2.2.2 Construction of Operators	23
2.2.3 Auxiliary Result	24
2.2.4 Convergence of $S_n^{q_n}(f)$	25
2.2.5 Convergence Properties in Weighted Space	29
2.2.6 Other Properties.....	32
2.3 q -Baskakov Operators	35
2.3.1 Construction of Operators and Some Properties of Them	35
2.3.2 Approximation Properties	40
2.3.3 Shape-Preserving Properties	42
2.3.4 Monotonicity Property	45

2.4	Approximation Properties of q -Baskakov Operators	48
2.4.1	Introduction	48
2.4.2	Main Results	50
2.4.3	Proofs	50
2.5	q -Bleimann–Butzer–Hahn Operators	62
2.5.1	Introduction	63
2.5.2	Construction of the Operators	63
2.5.3	Properties of the Operators	65
2.5.4	Some Generalization of L_n	71
3	q-Integral Operators	73
3.1	q -Picard and q -Gauss–Weierstrass Singular Integral Operator	73
3.1.1	Introduction	73
3.1.2	Rate of Convergence in $L_p(\mathbb{R})$	75
3.1.3	Convergence in Weighted Space	78
3.1.4	Approximation Error	80
3.1.5	Global Smoothness Preservation Property	84
3.2	Generalized Picard Operators	85
3.2.1	Introduction	86
3.2.2	Pointwise Convergence	91
3.2.3	Order of Pointwise Convergence	95
3.2.4	Norm Convergence	98
3.3	q -Meyer–König–Zeller–Durrmeyer Operators	100
3.3.1	Introduction	101
3.3.2	Estimation of Moments	101
3.3.3	Convergence	106
4	q-Bernstein-Type Integral Operators	113
4.1	Introduction	113
4.2	q -Bernstein–Kantorovich Operators	113
4.2.1	Direct Results	114
4.3	q -Bernstein–Durrmeyer Operators	117
4.3.1	Auxiliary Results	117
4.3.2	Direct Results	121
4.3.3	Applications to Random and Fuzzy Approximation	127
4.4	Discretely Defined q -Durrmeyer Operators	132
4.4.1	Moment Estimation	132
4.4.2	Rate of Approximation	134
4.5	Genuine q -Bernstein–Durrmeyer Operators	139
4.5.1	Moments	139
4.5.2	Direct Results	140

4.6	q -Bernstein Jacobi Operators	141
4.6.1	Basic Results	142
4.6.2	Convergence	143
5	q-Summation-Integral Operators	145
5.1	q -Baskakov-Durrmeyer Operators	145
5.1.1	Construction of Operators	146
5.1.2	Local Approximation	151
5.1.3	Rate of Convergence	154
5.1.4	Weighted Approximation	155
5.1.5	Recurrence Relation and Asymptotic Formula	157
5.2	q -Szász-Beta Operators	164
5.2.1	Construction of Operators	164
5.2.2	Direct Theorem	167
5.2.3	Weighted Approximation	170
5.3	q -Szász-Durrmeyer Operators	171
5.3.1	Auxiliary Results	172
5.3.2	Approximation Properties	175
5.4	q -Phillips Operators	180
5.4.1	Moments	181
5.4.2	Direct Results	184
5.4.3	Voronovskaja-Type Theorem	190
6	Statistical Convergence of q-Operators	195
6.1	General Class of Positive Linear Operators	196
6.1.1	Notations and Preliminary Results	196
6.1.2	Construction of the Operators	196
6.1.3	Statistical Approximation Properties in Weighted Space	200
6.1.4	Special Cases of T_n Operator	203
6.2	q -Szász-King-type Operators	205
6.2.1	Notations and Preliminaries	205
6.2.2	Weighted Statistical Approximation Property	207
6.2.3	Rate of Weighted Approximation	209
6.3	q -Baskakov-Kantorovich Operators	213
6.3.1	Introduction	213
6.3.2	q -Analogue of Baskakov-Kantorovich Operators	215
6.3.3	Weighted Statistical Approximation Properties	217
6.3.4	Rate of Convergence	218
7	q-Complex Operators	223
7.1	Summation-Integral-Type Operators in Compact Disks	223
7.1.1	Basic Results	224
7.1.2	Upper Bound	228
7.1.3	Asymptotic Formula and Exact Order	230
7.2	q -Gauss-Weierstrass Operator	238
7.2.1	Introduction	238

7.2.2	Approximation Properties	239
7.2.3	Shape-Preserving Properties	241
7.2.4	Applications of q -Derivative to Operators	245
7.2.5	Exact Order of Approximation	247
