Part I Low Dimensional Chaos

1	Weak Chaos, Infinite Ergodic Theory, and Anomalous Dynamics	3
	Rainer Klages	
1.1	Introduction	3
1.2	Chaos and Anomalous Dynamics	6
1.2.1	Deterministic Chaos in a Simple Map	6
1.2.2	Weak Chaos and Infinite Ergodic Theory	9
1.2.3	A Generalized Hierarchy of Chaos	14
1.3	Anomalous Diffusion	15
1.3.1	A Simple Model Generating Anomalous Diffusion	16
1.3.2	Continuous Time Random Walk Theory	18
1.3.3	A Fractional Diffusion Equation	22
1.4	Anomalous Fluctuation Relations	24
1.4.1	Fluctuation Relations	24
1.4.2	Fluctuation Relations for Ordinary Langevin Dynamics	25
1.4.3	Fluctuation Relations for Anomalous Langevin Dynamics	28
1.5	Anomalous Dynamics of Biological Cell Migration	31
1.5.1	Cell Migration	31
1.5.2	Experimental Results and Statistical Analysis	32
1.5.3	Stochastic Modeling	35
1.6	Summary	37
	References	38
2	Directed Transport in a Stochastic Layer	43
	Alexei Vasiliev	
2.1	Introduction	43
2.2	External Forcing of Order One	45

2.3	Small External Forcing	49
2.3.1	Main Equations: Diffusion of the Adiabatic Invariant	49
2.3.2	Average Velocity of the Transport	52
2.4	Summary	56
	References	57

Part II From Chaos to Kinetics: Application to Hot Plasmas

3	On the Nonlinear Electron Vibrations in a Plasma	61
	Didier Bénisti	
3.1	Introduction	61
3.2	Perturbative Motion of Electrons Acted Upon by an Electrostatic Wave	63
3.2.1	General Formalism	64
3.2.2	Perturbative Analysis	68
3.3	Envelope Equation for a Purely Time-Dependent Wave Amplitude	75
3.3.1	Exponentially Growing Wave	76
3.3.2	Generalized Expression for χ_i	77
3.3.3	Symmetric Detrapping	78
3.3.4	Nonlinear Landau Damping Rate	79
3.4	Variational Approach and Generalization to a Space-Dependent Wave Amplitude	81
3.4.1	Physical Discussion of the Previous Results Using a Variational Approach	82
3.4.2	One-Dimensional Variation of the Wave Amplitude	83
3.4.3	Three-Dimensional Space Variation of the Wave Amplitude	91
3.5	Nonlinear Frequency Shift of an SRS-Driven Plasma Wave	94
3.5.1	Derivation of χ_r	94
3.5.2	Derivation of α_d	98
3.5.3	Comparisons with Results from Vlasov Simulations of Stimulated Raman Scattering and with Previous Theories	99
3.5.4	Discussion of Previously Proposed Nonlinear Dispersion Relations	102
3.6	Conclusion	103
3.7	Appendix: Derivation of $\partial_\omega \chi_r^{\text{eff}}$	105
	References	106
4	How to Face the Complexity of Plasmas?	109
	Dominique F. Escande	
4.1	Introduction	110
4.1.1	What This Chapter Is About	110
4.1.2	Plasma Physics	112

4.2	Facing Plasma Complexity	114
4.2.1	Present Status of the Description of Plasma Complexity	114
4.2.2	Possible Methodological Improvements	122
4.3	Describing Plasma Dynamics with Finite-Dimensional Hamiltonian Systems	134
4.3.1	Recovering Vlasovian Linear Theory with a Mechanical Understanding	137
4.3.2	Quasilinear Theory	140
4.3.3	Dynamics When the Distribution Is a Plateau	141
4.3.4	Diffusion in a Given Spectrum of Waves	142
4.3.5	A Crucial Numerical Simulation	146
4.3.6	New Analytical Calculations	147
4.4	Conclusion	149
4.5	Appendix 1: Extended Summary	150
4.6	Appendix 2: First Example of a Claim Section	153
4.7	Appendix 3: Second Example of a Claim Section	153
	References	155
5	First Principle Transport Modeling in Fusion Plasmas:	
	Critical Issues for ITER	159
	Yanick Sarazin	
5.1	Transport Issues in Controlled Fusion Devices	159
5.1.1	Magnetic Configuration and Main Plasma Parameters ...	159
5.1.2	Transport and Fusion Performance	161
5.1.3	Transport and Turbulence	162
5.2	Turbulence Modeling: The Need for a kinetic Description	162
5.2.1	Collisionless Fluid Approaches “à la Hammett-Perkins”	163
5.2.2	Gyrokinetic Description	166
5.3	Main Micro-Instabilities in Fusion Plasmas	168
5.3.1	Physical Understanding of Drift-Wave and Interchange Instabilities	168
5.3.2	Simple Model for Drift-Wave and Interchange Instabilities	172
5.3.3	Bump-on-Tail Instability	175
5.4	Critical Issues in Turbulent Transport Modeling	179
5.4.1	Gradient-Versus Flux-Driven Models	179
5.4.2	Profile Relaxation and Turbulence Trapping	180
5.4.3	Large Scale Flows and Transport Barriers	183
5.5	Conclusion	186
	References	187

Part III From Kinetics to Fluids and Solids

6	Turbulent Thermal Convection and Emergence of Isolated Large Single Vortices in Soap Bubbles	191
	Hamid Kellay	
6.1	Introduction	191
6.2	Isolated Vortices	192
6.3	Statistical Properties of the Temperature and Velocity Fields	197
6.4	Conclusion	205
	References	205
7	On the Occurrence of Elastic Singularities in Compressed Thin Sheets: Stress Focusing and Defocusing	207
	Alain Pocheau	
7.1	Introduction	208
7.2	On Singularity Occurrence in Sheet Elasticity: From Elastica to Crumpled Paper	210
7.3	Basics on Linear Elasticity of Sheets	212
	7.3.1 Sheet Elastic Energy	213
	7.3.2 Gaussian Curvature and Theorema Egregium	214
	7.3.3 Sheet Equilibrium and Föppl–von Kármán’s Equation ...	216
7.4	Experiment	217
	7.4.1 Setup	217
	7.4.2 Compression Route	218
	7.4.3 Defocusing Scaling	221
7.5	Energy Criterion for Stress Focusing and Scalings	222
	7.5.1 Energy Criterion for Stress Focusing or Defocusing	222
	7.5.2 Scalings	223
7.6	Phase Diagram and Nature of Singularities	224
	7.6.1 Scale-Invariance and Defocusing	225
	7.6.2 Scalings and Phase Diagram for Singularities	226
	7.6.3 Plasticity	229
7.7	Conclusion	230
	References	231
8	Transport Properties in a Model of Quantum Fluids and Solids	233
	Christophe Josserand	
8.1	Introduction: One Equation, Many Contexts	233
	8.1.1 Bose–Einstein Condensates	234
	8.1.2 Superfluid Helium	236
	8.1.3 A Model for Supersolidity?	237
	8.1.4 Nonlinear Optics	238
	8.1.5 Fluid Mechanics	238
8.2	General Properties of the NLS Equation	239
	8.2.1 Conserved Quantities and Hamiltonian Structures	240

8.2.2	Invariances of the Equation	241
8.2.3	Integrability, Solitons and Solitary Waves	241
8.2.4	Hydrodynamical Equations	242
8.2.5	Quantized Vortices	244
8.2.6	Dispersion Relation, Spectrum of Excitation and Superfluidity	245
8.3	Vortex Nucleation	245
8.3.1	Around the Transonic Regime	246
8.3.2	The Euler–Tricomi Equation in the Transonic Region	248
8.3.3	From the Euler–Tricomi Equation to Vortex Nucleation?	250
8.4	Nonclassical Rotational Inertia in a Supersolid Model	251
8.4.1	Properties of the Model	252
8.4.2	Ground State of the Gross–Pitaevskii Model	256
8.4.3	A Model Combining Elastic and Superfluid Properties	261
8.5	Conclusion	264
	References	264

Part IV Beyond Physics: Examples of Complex Systems

9 Spatial and Temporal Order Beyond the Deterministic Limit: The Role of Stochastic Fluctuations in Population Dynamics

	Duccio Fanelli	269
9.1	Introduction	269
9.2	On the Deterministic and Stochastic Viewpoints	270
9.3	The Van Kampen Expansion Applied to a Simple Birth/Death Stochastic Model	272
9.4	A Model of Autocatalytic Reactions	278
9.5	The Aspatial Model: Deterministic and Stochastic Dynamics	279
9.6	Spatial Model: Ordered Patterns Revealed by the van Kampen System Size Expansion	284
9.7	Conclusion	289
	References	292

10 An Ising Model for Road Traffic Inference

	Cyril Furtlehner	293
10.1	Introduction	293
10.2	The Belief Propagation Algorithm	294
10.3	The Inverse Ising Problem	298
10.3.1	Gibbs Free Energy	300
10.3.2	Plefka’s Expansion	300
10.3.3	Linear Response Approximate Solution	302
10.3.4	Bethe Approximation	303

10.4	Application Context	305
10.4.1	Road Traffic Inference.....	305
10.4.2	An Ising Model for Traffic	305
10.4.3	MRF Model and Pseudo Moment Matching Calibration	310
10.5	Multiple BP Fixed Points for Multiple Traffic Patterns	311
10.6	Experiments with Synthetic and Real Data	315
10.7	Conclusion	319
	References.....	320
	Index	323

From Hamiltonian Chaos to Complex Systems

A Nonlinear Physics Approach

Leoncini, X.; Leonetti, M. (Eds.)

2013, XVII, 325 p., Hardcover

ISBN: 978-1-4614-6961-2
