

Contents

1	The Role of Individual Behaviors in Socio-Economic Sciences	1
1.1	Introduction	1
1.2	Complexity Aspects of Social and Economic Systems	3
1.3	The Contribution of Mathematics to Social Sciences	5
1.4	Critical Analysis	9
2	Mathematical Tools for Modeling Social Complex Systems.....	11
2.1	Introduction	11
2.2	Complexity Reduction and Mathematical Representation	14
2.3	Mathematical Structures Toward Modeling.....	18
2.3.1	Conservative Interactions.....	18
2.3.2	Non-conservative Interactions.....	20
2.4	Open Systems	22
2.5	Systems with Discrete States	24
2.6	Microscopic Interactions and Sources of Nonlinearity.....	26
2.6.1	Interaction Rate	27
2.6.2	Table of Games	28
2.6.3	Inner Reorganization of Functional Subsystems	28
2.7	On the Solution of Mathematical Problems.....	29
2.8	Critical Analysis	30
3	Modeling Cooperation and Competition in Socio-Economic Systems ..	33
3.1	Introduction	33
3.2	Cooperative and Competitive Stochastic Games	34
3.3	Modeling Socio-Economic Interactions	36
3.3.1	Activity Lattice	37
3.3.2	Interaction Rate	37
3.3.3	Table of Games	38
3.3.4	Critical Threshold.....	42
3.4	Technical Improvements.....	44
3.4.1	Additional Sources of Nonlinearity in the Interactions	45

3.4.2	Models with Several Interacting Functional Subsystems	46
3.4.3	Models with Continuous Activity Variable	46
3.5	Critical Analysis	47
4	Welfare Policy: Applications and Simulations	51
4.1	Introduction	51
4.2	Brainstorming Toward Parameter Sensitivity Analysis	53
4.2.1	Initial Wealth Status	53
4.2.2	Controlled vs. Free Social Competition	54
4.3	Numerical Simulations of Selected Case Studies	57
4.3.1	Influence of the Initial Condition	58
4.3.2	Influence of a Constant Critical Threshold	59
4.3.3	Influence of a Variable Critical Threshold	61
4.3.4	Overview of the Whole Set of Simulations	61
4.4	Critical Analysis	63
5	Forward Look at Research Perspectives	69
5.1	Introduction	69
5.2	Welfare and Well-being Policies	70
5.2.1	Interactions Over Networks	70
5.2.2	Modeling Open Systems	71
5.2.3	Understanding Ethical and Unethical Behaviors	72
5.3	Toward Additional Applications	72
5.3.1	Voting Dynamics	73
5.3.2	Diffusion of Technological Innovations	73
5.3.3	Migration Phenomena	74
5.3.4	Democratic Transitions	74
5.3.5	Spread and Evolution of Criminality	75
5.4	On the Interplay Among Different Dynamics	76
5.5	Analytical Problems	77
5.5.1	Existence of Solutions	78
5.5.2	Equilibrium Configurations and Their Dependence on the Model Parameters	78
5.5.3	Open Systems	78
5.5.4	Multiscale Problems	79
5.5.5	Models with Spatial Structure	79
5.5.6	Further Developments of Game Theory	80
5.6	Conclusions	80
