Part I Partial Differential Equations in Finance

1	Introduction	3
1.1	Assets	3
1.2	Derivative Securities	8
1.2.1	Forward and Futures Contracts	8
1.2.2	Options	10
1.2.3	Interest Rate Derivatives	12
1.2.4	Factors Affecting Derivative Prices	12
1.2.5	Functions of Derivative Securities	13
	Problems	14
2	European Style Derivatives	17
2.1	Asset Price Models and Itô's Lemma	17
2.1.1	Models for Asset Prices	17
2.1.2	Itô's Lemma	20
2.1.3	Expectation and Variance of Lognormal Random Variables	22
2.2	Derivation of the Black–Scholes Equation	25
2.2.1	Arbitrage Arguments	25
2.2.2	The Black–Scholes Equation	26
2.2.3	Final Conditions for the Black–Scholes Equation	29
2.2.4	Hedging and Greeks	30
2.2.5	Transforming the Black–Scholes Equation into an Equation Defined on a Finite Domain	31
2.2.6	Derivation of the Equation for Options on Futures	35
2.3	General Equations for Derivatives	39
2.3.1	Generalization of Itô's Lemma	39
2.3.2	Derivation of Equations for Financial Derivatives	40
2.3.3	Three Types of State Variables	44

2.3.4	Random Variables Not Being But Related to Prices of Assets	45
2.4	Uniqueness of Initial-Value Problems for Degenerate Parabolic PDEs	47
2.4.1	Reversion Conditions for Stochastic Models	47
2.4.2	[†] Uniqueness of Solutions for One-Dimensional Case	51
2.4.3	[‡] Uniqueness of Solutions for Two-Dimensional Case	56
2.4.4	[‡] Uniqueness of Solutions for European Options on Assets with Stochastic Volatilities	61
2.5	Jump Conditions	64
2.5.1	Hyperbolic Equations with a Dirac Delta Function	64
2.5.2	Jump Conditions for Options on Stocks with Discrete Dividends and Discrete Sampling	65
2.6	Solutions of European Options	67
2.6.1	Converting the Black–Scholes Equation into a Heat Equation	68
2.6.2	The Solutions of Parabolic Equations	71
2.6.3	Solutions of the Black–Scholes Equation	74
2.6.4	Prices of Forward Contracts and Delivery Prices	76
2.6.5	Derivation of the Black–Scholes Formulae	76
2.6.6	Put–Call Parity Relation	80
2.6.7	An Explanation in Terms of Probability	81
	Problems	83
3	American Style Derivatives	105
3.1	Constraints on American Style Derivatives	105
3.1.1	Constraints on American Options	105
3.1.2	Some Properties of American Style Derivatives	111
3.2	American Options Problems as Linear Complementarity Problems	115
3.2.1	Formulation of the Linear Complementarity Problem in (S, t) -Plane	115
3.2.2	Formulation of the Linear Complementarity Problem in $(x, \bar{\tau})$ -Plane	117
3.2.3	Formulation of the Linear Complementarity Problem on a Finite Domain	119
3.2.4	More General Form of the Linear Complementarity Problems	120
3.3	American Option Problems as Free-Boundary Problems	121
3.3.1	Free Boundaries	121
3.3.2	Free-Boundary Problems	128
3.3.3	Put–Call Symmetry Relations	132
3.3.4	Equations for Some Greeks	135
3.3.5	Solutions for Perpetual American Call Options	137

3.4	Some Conclusion from Arbitrage Theory	140
3.4.1	Three Conclusions and Some Portfolios	140
3.4.2	Bounds of Option Prices	142
3.4.3	Relations Between Call and Put Prices	146
	Problems	148
4	Exotic Options	159
4.1	Introduction	159
4.2	Barrier Options	160
4.2.1	Knock-Out and Knock-In Options	160
4.2.2	Closed-Form Solutions of Some European Barrier Options	161
4.2.3	Formulation of American Barrier Options	167
4.2.4	Parisian Options	168
4.3	Asian Options	172
4.3.1	Average Price, Average Strike, and Double Average Options	172
4.3.2	Continuously and Discretely Sampled Arithmetic Averages	173
4.3.3	Partial Differential Equations for Asian Options	176
4.3.4	Reducing to One-Dimensional Problems	177
4.3.5	Jump Conditions	179
4.3.6	American Asian Options	180
4.3.7	Some Examples	183
4.4	Lookback Options	185
4.4.1	Equations for Lookback Options	185
4.4.2	Reducing to One-Dimensional Problems	191
4.4.3	Closed-Form Solutions for European Lookback Options	193
4.4.4	American Options Formulated as Free-Boundary Problems	207
4.4.5	A Closed-Form Solution for a Perpetual American Lookback Option	210
4.4.6	Lookback-Asian Options	212
4.4.7	Some Examples	214
4.5	Multi-Asset Options	216
4.5.1	[†] Equations for Multi-Asset Options and Green's Formula	217
4.5.2	Exchange Options	221
4.5.3	[†] Options on the Extremum of Several Assets	224
4.5.4	[†] Formulation of Multi-Asset Option Problems on a Finite Domain	235
4.6	Some Other Exotic Options	241
4.6.1	Binary Options	241
4.6.2	Forward Start Options (Delayed Strike Options)	242

4.6.3	Compound Options	243
4.6.4	Chooser Options	249
	Problems	250
5	Interest Rate Derivative Securities	277
5.1	Introduction	277
5.2	Bonds	280
5.2.1	Bond Values for Deterministic Short Rates	280
5.2.2	Bond Equations for Random Short Rates	282
5.3	Some Explicit Solutions of Bond Equations	283
5.3.1	Analytic Solutions for the Vasicek and Cox–Ingersoll–Ross Models	284
5.3.2	Explicit Solutions for the Ho–Lee and Hull–White Models	291
5.4	Inverse Problem on the Market Price of Risk	293
5.5	Application of Bond Equations	297
5.5.1	Bond Options and Options on Bond Futures Contracts	297
5.5.2	Interest Rate Swaps and Swaptions	300
5.5.3	Interest Rate Caps, Floors, and Collars	307
5.6	Multi-Factor Interest Rate Models	310
5.6.1	Brief Description of Several Multi-Factor Interest Rate Models	310
5.6.2	Reducing the Randomness of a Zero-Coupon Bond Curve to That of a Few Zero-Coupon Bonds	311
5.6.3	A Three-Factor Interest Rate Model and the Equation for Interest Rate Derivatives	316
5.7	Two-Factor Convertible Bonds	324
	Problems	331
<hr/> Part II Numerical Methods for Derivative Securities <hr/>		
6	Basic Numerical Methods	349
6.1	Approximations	349
6.1.1	Interpolation	349
6.1.2	Approximation of Partial Derivatives	353
6.1.3	Approximate Integration	357
6.1.4	Least Squares Approximation	359
6.2	Solution of Systems and Eigenvalue Problems	360
6.2.1	LU Decomposition of Linear Systems	360
6.2.2	Iteration Methods for Linear Systems	363
6.2.3	Iteration Methods for Nonlinear Systems	365
6.2.4	Obtaining Eigenvalues and Eigenvectors	370

6.3	Determination of Parameters in Models	376
6.3.1	Constant Variances and Covariances	376
6.3.2	Variable Parameters	378
	Problems	380
	Projects	386
7	Finite-Difference Methods	391
7.1	Finite-Difference Schemes	391
7.2	Stability and Convergence Analysis	400
7.2.1	Stability	400
7.2.2	Convergence	411
7.3	Extrapolation of Numerical Solutions	414
7.4	Two-Dimensional Degenerate Parabolic Equations	418
7.4.1	The Crank–Nicolson Difference Scheme and a Preliminary Lemma	420
7.4.2	‡The Proof of the Preliminary Lemma	422
7.4.3	‡Solvability and Stability	431
7.4.4	‡Convergence	433
	Problems	435
8	Initial-Boundary Value and LC Problems	445
8.1	Explicit Methods	445
8.1.1	Pricing European Options by Using \bar{V} , ξ , τ or u , x , $\bar{\tau}$ Variables	445
8.1.2	Projected Methods for LC Problems	449
8.1.3	Binomial and Trinomial Methods	452
8.1.4	Relations Between the Lattice Methods and the Explicit Finite-Difference Methods	462
8.1.5	Examples of Unstable Schemes	466
8.2	Implicit Methods	467
8.2.1	Pricing European Options by Using \bar{V} , ξ , τ Variables	467
8.2.2	European Options with Discrete Dividends and Asian and Lookback Options with Discrete Sampling	468
8.2.3	Projected Direct Methods for the LC Problem	478
8.2.4	Projected Iteration Methods for the LC Problem	481
8.2.5	Comparison with Explicit Methods	482
8.2.6	Two-Asset Options	484
8.3	Singularity-Separating Method	486
8.3.1	Barrier Options	486
8.3.2	European Vanilla Options with Variable Volatilities ...	492
8.3.3	Bermudan Options	497
8.3.4	European Parisian Options	503
8.3.5	European Average Price Options	505
8.3.6	European Two-Factor Options	508

8.3.7	Two-Factor Convertible Bonds with $D_0 = 0$	519
8.4	Pseudo-Spectral Methods	519
	Problems	522
	Projects	532
9	Free-Boundary Problems	535
9.1	SSM for Free-Boundary Problems	536
9.1.1	One-Dimensional Cases	536
9.1.2	Two-Dimensional Cases	541
9.2	Implicit Finite-Difference Methods	552
9.2.1	Solution of One-Dimensional Problems	552
9.2.2	Solution of Greeks	558
9.2.3	Numerical Results of Vanilla Options and Comparison	560
9.2.4	Solution and Numerical Results of Exotic Options	568
9.2.5	Solution of Two-Dimensional Problems	575
9.2.6	Numerical Results of Two-Factor Options	579
9.3	Pseudo-Spectral Methods	586
9.3.1	The Description of the Pseudo-Spectral Methods for Two-Factor Convertible Bonds	586
9.3.2	Numerical Results of Two-Factor Convertible Bonds	593
	Problems	598
	Projects	603
10	Interest Rate Modeling	605
10.1	Inverse Problems	605
10.1.1	Another Formulation of the Inverse Problem	605
10.1.2	Numerical Methods for the Inverse Problem	611
10.1.3	Numerical Results on Market Prices of Risk	615
10.2	Numerical Results of One-Factor Models	618
10.3	Pricing Derivatives with Multi-Factor Models	623
10.3.1	Determining Models from the Market Data	623
10.3.2	Numerical Methods and Results	628
	Problems	633
	Projects	635
	References	637
	Index	643

Derivative Securities and Difference Methods

Zhu, Y.-l.; Wu, X.; Chern, I.-L.; Sun, Z.-z.

2013, XXII, 647 p., Hardcover

ISBN: 978-1-4614-7305-3
