

Contents

1	Introductory Ideas	1
1.1	The Bergman Kernel	1
1.1.1	Calculating the Bergman Kernel	14
1.1.2	The Poincaré-Bergman Distance on the Disc	19
1.1.3	Construction of the Bergman Kernel by Way of Differential Equations	20
1.1.4	Construction of the Bergman Kernel by Way of Conformal Invariance	23
1.2	The Szegő and Poisson–Szegő Kernels	25
1.3	Formal Ideas of Aronszajn	35
1.4	A New Bergman Basis	36
1.5	Further Examples	39
1.6	A Real Bergman Space	40
1.7	The Behavior of the Singularity in a General Setting	41
1.8	The Annulus	43
1.9	A Direct Connection Between the Bergman and Szegő Kernels	45
1.9.1	Introduction	45
1.9.2	The Case of the Disc	45
1.9.3	The Unit Ball in $\mathbb{C}^n$	49
1.9.4	Strongly Pseudoconvex Domains	52
1.9.5	Concluding Remarks	53
1.10	Multiply Connected Domains	53
1.11	The Bergman Kernel for a Sobolev Space	54
1.12	Ramadanov’s Theorem	56
1.13	Coda on the Szegő Kernel	58
1.14	Boundary Localization	59
1.14.1	Definitions and Notation	60
1.14.2	A Representative Result	60

1.14.3	The More General Result in the Plane	62
1.14.4	Domains in Higher-Dimensional Complex Space	62
	Exercises	65
2	The Bergman Metric	71
2.1	Smoothness to the Boundary of Biholomorphic Mappings	71
2.2	Boundary Behavior of the Bergman Metric	81
2.3	The Biholomorphic Inequivalence of the Ball and the Polydisc	83
	Exercises	84
3	Further Geometric and Analytic Theory	87
3.1	Bergman Representative Coordinates	87
3.2	The Berezin Transform	90
3.2.1	Preliminary Remarks	90
3.2.2	Introduction to the Poisson–Bergman Kernel	91
3.2.3	Boundary Behavior	94
3.3	Ideas of Fefferman	98
3.4	Results on the Invariant Laplacian	100
3.5	The Dirichlet Problem for the Invariant Laplacian on the Ball	109
3.6	Concluding Remarks	115
	Exercises	115
4	Partial Differential Equations	117
4.1	The Idea of Spherical Harmonics	117
4.2	Advanced Topics in the Theory of Spherical Harmonics: The Zonal Harmonics	117
4.3	Spherical Harmonics in the Complex Domain and Applications	130
4.4	An Application to the Bergman Projection	141
	Exercises	145
5	Further Geometric Explorations	147
5.1	Introductory Remarks	147
5.2	Semicontinuity of Automorphism Groups	151
5.3	Convergence of Holomorphic Mappings	156
5.3.1	Finite Type in Dimension Two	156
5.4	The Semicontinuity Theorem	166
5.5	Some Examples	168
5.6	Further Remarks	168
5.7	The Lu Qi-Keng Conjecture	169
5.8	The Lu Qi-Keng Theorem	171
5.9	The Dimension of the Bergman Space	174
5.10	The Bergman Theory on a Manifold	178
5.10.1	Kernel Forms	178
5.10.2	The Invariant Metric	182
5.11	Boundary Behavior of the Bergman Metric	184
	Exercises	185

6 Additional Analytic Topics	187
6.1 The Diederich–Fornæss Worm Domain	187
6.2 More on the Worm	192
6.3 Non-Smooth Versions of the Worm Domain	199
6.4 Irregularity of the Bergman Projection	200
6.5 Irregularity Properties of the Bergman Kernel	205
6.6 The Kohn Projection Formula	207
6.7 Boundary Behavior of the Bergman Kernel	208
6.7.1 Hörmander’s Result on Boundary Behavior	209
6.7.2 The Fefferman’s Asymptotic Expansion	215
6.8 The Bergman Kernel for a Sobolev Space	221
6.9 Regularity of the Dirichlet Problem on a Smoothly Bounded Domain and Conformal Mapping	224
6.10 Existence of Certain Smooth Plurisubharmonic Defining Functions for Strictly Pseudoconvex Domains and Applications	228
6.10.1 Introduction	228
6.11 Proof of Theorem 6.10.1	229
6.12 Application of the Complex Monge–Ampère Equation	233
6.13 An Example of David Barrett	235
6.14 The Bergman Kernel as a Hilbert Integral	245
Exercises	249
7 Curvature of the Bergman Metric	251
7.1 What is the Scaling Method?	251
7.2 Higher Dimensional Scaling	252
7.2.1 Nonisotropic Scaling	252
7.2.2 Normal Convergence of Sets	254
7.2.3 Localization	255
7.3 Klembeck’s Theorem with C^2 -Stability	261
7.3.1 The Main Goal	261
7.3.2 The Bergman Metric near Strictly Pseudoconvex Boundary Points	262
Exercises	263
8 Concluding Remarks	273
Table of Notation	275
Bibliography	277
Index	287

Geometric Analysis of the Bergman Kernel and Metric

Krantz, S.G.

2013, XIII, 292 p. 7 illus., Hardcover

ISBN: 978-1-4614-7923-9
