

Contents

1	Flat Space: Fourier Analysis on \mathbb{R}^m	1
1.1	Distributions or Generalized Functions	1
1.2	Fourier Integrals	8
1.2.1	Fourier Transforms	9
1.2.2	Applications to Partial Differential Equations	17
1.2.3	Laplace Transforms	21
1.2.4	Application to Probability and Statistics: The Central Limit Theorem	25
1.3	Fourier Series and the Poisson Summation Formula	30
1.3.1	Fourier Series	31
1.3.2	Vibrating Drums	36
1.3.3	The Poisson Summation Formula	39
1.3.4	Spectroscopy and the Search for Hidden Periodicities	46
1.3.5	Poisson's Sum Formula as a Trace Formula	53
1.3.6	Schrödinger Eigenvalues	58
1.4	Mellin Transforms, Epstein and Dedekind Zeta Functions	60
1.4.1	Mellin Transforms	60
1.4.2	Epstein's Zeta Function	63
1.4.3	Algebraic Number Theory	70
1.4.4	Crystallography	83
1.5	Finite Symmetric Spaces, Wavelets, Quasicrystals, Weyl's Criterion	88
1.5.1	Symmetric Spaces and Their Finite Analogues	89
1.5.2	Wavelets	94
1.5.3	Quasicrystals	97
1.5.4	Weyl's Criterion for Uniform Distribution	101
2	A Compact Symmetric Space: The Sphere	107
2.1	Fourier Analysis on the Sphere	107
2.1.1	The Sphere as a Symmetric Space	107
2.1.2	Spherical Harmonics	112
2.1.3	Quantum Mechanics: The Hydrogen Atom	118

2.1.4	The Sun's Magnetic Field	121
2.1.5	Connections with Group Representations	125
2.1.6	Integral Equations for Spherical Harmonics	131
2.2	$O(3)$ and \mathbb{R}^3 : The Radon Transform	133
2.2.1	Harmonic Analysis on \mathbb{R}^3 in Spherical Polar Coordinates and Spectral Measures	134
2.2.2	CAT Scanners and the Radon Transform.....	142
3	The Poincaré Upper Half-Plane	149
3.1	Hyperbolic Geometry	149
3.1.1	The Basics: Arc Length, Area, Laplacian	149
3.1.2	Microwave Engineering: The Smith Chart	156
3.1.3	$SL(2, \mathbb{R})$ as a Lorentz-Type Group	162
3.2	Harmonic Analysis on H	164
3.2.1	Introduction	164
3.2.2	Harmonic Analysis on H in Rectangular Coordinates	165
3.2.3	Harmonic Analysis on H in Geodesic Polar Coordinates ...	171
3.2.4	The Helgason Transform on H	178
3.2.5	The Heat Equation on H in Rectangular Coordinates	185
3.2.6	The Heat Equation on H Using Helgason's Transform.....	187
3.2.7	The Central Limit Theorem for K -Invariant Random Variables on H . Transmission Lines with Random Inhomogeneities	189
3.2.8	Some Remarks on the Uses in Theoretical Physics of Harmonic Analysis on Groups Such as $SL(2, \mathbb{R})$	196
3.3	Fundamental Domains for Discrete Subgroups Γ of $G = SL(2, \mathbb{R})$	196
3.3.1	Introduction	197
3.3.2	Fundamental Domain for $SL(2, \mathbb{Z})$	203
3.3.3	Computation of Class Numbers of Imaginary Quadratic Fields	207
3.3.4	Dirichlet or Poincaré Polygon or Normal Fundamental Region	208
3.3.5	Other Discrete Subgroups of $SL(2, \mathbb{R})$	210
3.3.6	Riemann Surface of the Fundamental Domain	212
3.3.7	Triangle Groups and Quaternion Groups.....	215
3.3.8	Finite Upper Half-Planes and Their Tessellations	221
3.4	Modular or Automorphic Forms-Classical	227
3.4.1	Definitions, Eisenstein Series	227
3.4.2	The Discriminant, the Weierstrass \wp -Function, and Ramanujan's Tau Function	235
3.4.3	The Modular Invariant	240
3.4.4	Theta Functions.....	242
3.4.5	Elliptic Integrals and Elliptic Curves	248

3.4.6	The Connection Between Theta Functions and Coding Theory	252
3.4.7	Poincaré Series	253
3.4.8	Some Estimates for Fourier Coefficients of Modular Forms	255
3.4.9	The Representation of Integers by Quadratic Forms	256
3.4.10	Korteweg–DeVries Equation	257
3.5	Modular Forms: Not So Classical—Maass Waveforms	258
3.5.1	Maass Waveforms	258
3.5.2	Maass Cusp Forms	268
3.5.3	Computations of Maass Cusp Forms	272
3.5.4	Elementary Estimates of Fourier Coefficients and Eigenvalues	284
3.5.5	Dimensions of Spaces of Maass Cusp Forms	287
3.5.6	Finite Analogues of Eisenstein Series	289
3.6	Modular Forms and Dirichlet Series. Hecke Theory and Generalizations	292
3.6.1	Dirichlet Series Corresponding to Holomorphic Modular Forms: The Hecke Correspondence	292
3.6.2	Dirichlet Series Corresponding to Maass Waveforms	295
3.6.3	Remarks on Extensions to Congruence Subgroups	299
3.6.4	Hecke Operators on Holomorphic Forms	302
3.6.5	Hecke Operators for Maass Wave Forms	306
3.6.6	Rankin–Selberg Method, Distribution of Horocycles in the Fundamental Domain, and Modular Symbols	312
3.7	Harmonic Analysis on the Fundamental Domain	316
3.7.1	Introduction	316
3.7.2	Spectral Resolution of Δ on $SL(2, \mathbb{Z}) \backslash H$	320
3.7.3	A Non-Euclidean Poisson Summation Formula	333
3.7.4	Selberg’s Trace Formula for $SL(2, \mathbb{Z})$	343
3.7.5	Applications of Selberg’s Trace Formula	360
3.7.6	Tables Summarizing the Main Results	367
3.7.7	Modular Knots	367
3.7.8	Finite Analogue of the Selberg Trace Formula	374

	Index	403

Harmonic Analysis on Symmetric Spaces—Euclidean
Space, the Sphere, and the Poincaré Upper Half-Plane
Terras, A.

2013, XVII, 413 p. 83 illus., 32 illus. in color., Hardcover
ISBN: 978-1-4614-7971-0
