

Contents

1	The Problem of Cell Formation: Ideas and Their Applications	1
1.1	Introduction	1
1.2	Cellular Layout and Its Alternatives	3
1.3	(Dis)similarity and Performance Measures	7
1.3.1	Similarities and Dissimilarities: An Overview	7
1.3.2	Performance Measures: Are They Different	9
1.4	An Overview of the Existing Models and Approaches	11
1.4.1	Bond Energy Analysis	12
1.4.2	Iterative Approaches Based on Similarity Measures	14
1.4.3	Fuzzy Logic Approaches	16
1.4.4	Genetic Algorithms and Simulated Annealing	17
1.4.5	Neural Network Approaches	18
1.4.6	Graph-Theoretic Approaches	18
1.4.7	MILP Based Approaches	19
1.5	Conclusions and the Outline of This Book	21
2	The p-Median Problem	25
2.1	Introduction	25
2.2	The Pseudo-Boolean Representation	28
2.3	Reduction Techniques	32
2.3.1	Reduction of the Number of Monomials in the pBp	33
2.3.2	Reduction of the Number of Clients (Columns)	35
2.3.3	Preprocessing: An Overview and Application to the PMP	38
2.3.4	Minimality of the Pseudo-Boolean Representation	39
2.4	A Compact Mixed Boolean LP Model	41
2.4.1	Further Reductions	45
2.4.2	Computational Experiments	49
2.5	Instance Data Complexity	51
2.5.1	Data Complexity and Problem Size Reduction	51
2.5.2	Complex Benchmark Instances	54

2.6	Equivalent PMP Instances	61
2.6.1	Dimensions of PMP Equivalence Polyhedra	67
2.7	Summary and Future Research Directions	71
3	Application of the PMP to Cell Formation in Group Technology	75
3.1	Introduction	75
3.1.1	Background	75
3.1.2	Objectives and Outline	77
3.2	The p -Median Approach to Cell Formation	78
3.2.1	The MBpBM Formulation	79
3.2.2	Compactness of the MBpBM Formulation	82
3.2.3	A Note on the Optimality of PMP-Based Models	84
3.3	How to Model Additional Constraints of CF	86
3.3.1	Availability of Workforce	87
3.3.2	Capacity Constraints	88
3.3.3	Workload Balancing	89
3.3.4	Utilizing Sequences of Operations	91
3.4	Experimental Results	94
3.5	Summary and Future Research Directions	96
4	The Minimum Multicut Problem and an Exact Model for Cell Formation	101
4.1	Introduction	101
4.2	The Essence of the Cell Formation Problem	102
4.3	MINpCUT: A Straightforward Formulation (SF)	105
4.4	MINpCUT: An Alternative Formulation (AF)	106
4.5	Additional Constraints	107
4.6	Computational Experiments	111
4.7	Summary	112
5	Multiobjective Nature of Cell Formation	117
5.1	Introduction	117
5.2	Problems with a Minimization of the Intercell Movement	118
5.2.1	Inter-Versus Intracell Movement	120
5.2.2	Preserving Flows	121
5.3	Workforce-Related Objectives	123
5.4	Set-Up Time Savings	124
5.5	Concluding Remarks	126
6	Pattern-Based Heuristic for the Cell Formation Problem in Group Technology	129
6.1	Introduction	129
6.2	Clustering and Patterns	130
6.2.1	Patterns in CFP	131
6.3	The CFP Formulation	135
6.3.1	The CFP Objective Functions	136

6.4	Pattern Based Heuristic	137
6.5	Computational Results	144
6.6	Patterns for Other Combinatorial Optimization Problems	147
6.7	Summary and Future Research Directions	152
7	Two Models and Algorithms for Bi-Criterion Cell Formation	155
7.1	Introduction	155
7.2	Bi-Criterion Cell Formation Problems	155
7.3	Bi-Criterion Branch-and-Bound Algorithm	157
7.4	Computational Experiments	160
7.5	Conclusions	171
8	Summary and Conclusions	173
8.1	Summary	173
8.2	Conclusions	175
	Solutions to the 35 CF Instances from [71]	179
A.1	Solutions Without Singletons	179
A.2	Solutions with Singletons Allowed	187
	References	195
	Index	205

Cell Formation in Industrial Engineering

Theory, Algorithms and Experiments

Goldengorin, B.; Krushinsky, D.; Pardalos, P.M.

2013, XIV, 206 p., Hardcover

ISBN: 978-1-4614-8001-3
