

Contents

- 1 Biological Sequences** 1
 - 1.1 Introduction 1
 - 1.2 DNA, RNA and Proteins..... 2
 - 1.3 Sequencing Methods 3
 - References 6
- 2 Strings: Theory, Properties and Applications** 7
 - 2.1 Introduction 7
 - 2.2 Basic Definitions 7
 - 2.3 Distance Metrics 8
 - 2.4 Applications 9
 - 2.4.1 Primer Design for Polymerase Chain Reaction 9
 - 2.4.2 Identification of Transcription Factor Binding Sites 10
 - 2.4.3 Multiple Tree Alignment Problem 10
 - 2.4.4 Design of Diagnostic Probes 11
 - 2.4.5 Protein Function Prediction 11
 - 2.4.6 Drug Design..... 11
 - References 12
- 3 Mathematical Optimization**..... 13
 - 3.1 Preliminaries 13
 - 3.2 Optimization Problems 14
 - 3.3 Computational Complexity 15
 - 3.4 Global and Local Optimal Solutions 16
 - 3.5 Classification 16
 - 3.5.1 Combinatorial Versus Continuous Optimization Problem 17
 - 3.5.2 Convex Versus Non-convex Optimization 17
 - 3.5.3 Linear Versus Nonlinear Programming 18
 - 3.6 Methods 22
 - 3.6.1 Exact Methods 22
 - 3.6.2 Approximation Methods 22

3.6.3	Heuristics Algorithms	23
3.6.4	Hybrid Methods.....	23
	References	24
4	String Selection Problems	27
4.1	Introduction	27
4.2	The Set Median String and the Median String Problems	28
4.2.1	Methods	29
4.2.2	Computational Results	30
4.3	The Closest and the Farthest String Problems	31
4.3.1	Methods	31
4.3.2	Computational Results	36
4.4	The Closest and the Farthest Substring Problems	37
4.4.1	Methods	38
4.5	The Close to Most String Problem	41
4.6	The Far From Most String Problem	42
4.7	The Distinguishing String and Substring Selection Problems	44
4.8	The d -Mismatch Problem	45
4.9	Conclusions	45
	References	46

Optimization Approaches for Solving String Selection Problems

Pappalardo, E.; Pardalos, P.; Stracquadanio, G.

2013, VIII, 49 p. 2 illus. in color., Softcover

ISBN: 978-1-4614-9052-4
