Preface	ix
1 Preliminaries	
1.1 Elements of Linear Algebra	1
1.2 Normed Linear Spaces	24
2 Properties of Linear and Nonlinear Operators	
2.1 Linear Operators	55
2.2 Compact Linear Operators	78
2.3 Contraction Principle	93
3 Abstract Integral and Differential Calculus	
3.1 Integration of Vector Functions	109
3.2 Differential Calculus in Normed Linear Spaces	126
3.2A Newton Method	144
4 Local Properties of Differentiable Mappings	
4.1 Inverse Function Theorem	149
4.2 Implicit Function Theorem	156
4.3 Local Structure of Differentiable Maps, Bifurcations	166
4.3A Differentiable Manifolds, Tangent Spaces and Vector Fields	193
4.3B Differential Forms	207
4.3C Integration on Manifolds	220
5 Topological Methods	
5.1 Brouwer Fixed Point Theorem	243
5.1A Contractible Sets	250
5.2 Schauder Fixed Point Theorem	252
5.2A Fixed Point Theorems for Noncompact Operators	257
5.3 Classical Solutions of PDEs, Functional Setting	264
5.4 Classical Solutions, Applications of Fixed Point Theorems	268
5.5 Weak Solutions of PDEs, Functional Setting	271
5.6 Weak Solutions of PDEs, Applications of Fixed Point Theorems	277

5.7	Brouwer Topological Degree	283
5.7A	Brouwer Topological Degree on Manifolds	293
5.8	Leray-Schauder Topological Degree	313
5.8A	Global Bifurcation Theorem	331
5.8B	Topological Degree for Generalized Monotone Operators	339
5.9	Weak Solutions of PDEs, Applications of Degree Theory	346
5.9A	Weak Solutions of PDEs, Application of the Degree of Generalized Monotone Mappings	353
6	Monotonicity Methods	
6.1	Theory of Monotone Operators	361
6.1A	Browder and Leray–Lions Theorem	375
6.2	Weak Solutions of PDEs, Application of Monotone Operators	381
6.2A	Weak Solutions of PDEs, Application of Leray–Lions Theorem	386
6.3	Supersolutions, Subolutions, Monotone Iterations	391
6.3A	Minorant Principle and Krein–Rutman Theorem	400
6.3B	Supersolutions, Subolutions and Topological Degree	413
6.4	Maximum Principle for ODEs	421
6.5	Maximum Principle for PDEs	428
7	Variational Methods	
7.1	Local Extrema	435
7.2	Global Extrema	449
7.2A	Supersolutions, Subolutions and Global Extrema	464
7.2B	Ritz Method	467
7.3	Weak Solutions of PDEs, Applications of Global Minimizers	477
7.4	Mountain Pass Theorem	479
7.4A	Pseudogradient Vector Fields in Banach Spaces	489
7.5	Weak Solutions of PDEs, Applications of Mountain Pass Theorem	495
7.6	Saddle Point Theorem	499
7.6A	Linking Theorem	508
7.7	Weak Solutions of PDEs, Applications of Saddle Point Theorem	515
7.7A	Weak Solutions of PDEs, Applications of General Saddle Point Theorem	521
7.8	Relative Extrema and Lagrange Multipliers	527
7.8A	Lusternik–Schnirelmann Method	540
7.8B	Krasnoselski Potential Bifurcation Theorem	554
8	Some Applications to Partial Differential Equations	
8.1	Linear Evolution Equations and Semigroups	565
8.2	Semilinear Evolution Equations	575
8.3	Linearization of Quasilinear PDEs and Fixed Point Theorems	585
8.4	Equations on Riemann Manifolds	595

Summary of Methods 609

Typical Applications 611

Comparison of Bifurcation Results 617

List of Symbols 619

Index 623

Bibliography 641

Methods of Nonlinear Analysis
Applications to Differential Equations
Drabek, P.; Milota, J.
2013, X, 649 p., Hardcover
ISBN: 978-3-0348-0386-1
A product of Birkhäuser Basel
