Preface	ix
Introduction	1
Definitions, notation, and some standard facts	13
I Background	21
1 Calderón–Zygmund decomposition	23
1.1 Riesz rising sun lemma and the Calderón–Zygmund procedure . . .	23
1.1.1 Riesz rising sun lemma	23
1.1.2 Calderón–Zygmund lemma	25
1.1.3 Calderón–Zygmund decomposition	26
1.1.4 A weak type inequality for linear operators	29
1.1.5 Hardy–Littlewood maximal operator	31
1.2 Norms on BMO and Lipschitz spaces	33
1.2.1 John–Nirenberg inequality	34
1.2.2 Equivalence of Campanato norms	36
1.3 Relationship with real interpolation	39
1.4 An elementary stability theorem	42
1.4.1 A proof with much interpolation	42
1.4.2 Stabilization <i>à la</i> Bourgain	43
1.4.3 Some consequences	44
Notes and remarks	45
2 Singular integrals	47
2.1 Hilbert transformation	48
2.1.1 Hilbert transformation on L^1	50
2.1.2 The operator H on L^p , $1 < p < \infty$	51
2.2 General definition	52
2.2.1 Examples	54

2.2.2	Additional information	61
2.3	Vector-valued analogs	62
	Notes and remarks	64
3	Classical covering theorems	65
3.1	Classical covering theorems and partitions of unity	65
3.1.1	The Besicovitch q -process	65
3.1.2	Besicovitch theorem	67
3.1.3	Wiener lemma	70
3.1.4	Whitney lemma, WB-coverings, and partitions of unity	71
3.2	Another Calderón–Zygmund procedure	77
3.3	Stability of near-minimizers for the couple (L^1, L^∞)	82
3.3.1	Statement and proof	82
3.3.2	Vector form of the stability theorem	86
	Notes and remarks	89
4	Spaces of smooth functions and operators on them	91
4.1	Summary	91
4.1.1	Homogeneous spaces of smooth functions	91
4.1.2	Singular integral operators	95
4.2	Morrey–Campanato spaces: proofs	97
4.3	BMO and atomic H^1	102
4.4	Continuity of operators on BMO and Lipschitz spaces	106
4.4.1	A pointwise estimate	108
4.4.2	Norm estimates	112
4.5	Singular integrals related to wavelet expansions	114
4.5.1	More general operators	115
4.5.2	Consequences	118
4.5.3	An omitted proof	118
4.6	Weak L^1 -boundedness	120
	Notes and remarks	121
5	Some topics in interpolation	123
5.1	Main notions	123
5.2	Near-minimizers and interpolation	127
5.3	Near-minimizers for $L_{p,q}$ - and K -functionals	129
5.4	Near-minimizers for E - and K -functionals	131
5.5	The elementary stability theorem revisited	135
5.6	K -closed subcouples and stability	136
5.7	Linearization	141
	Notes and remarks	143
6	Regularization for Banach spaces	145
	Notes and remarks	150

7	Stability for analytic Hardy spaces	153
	Notes and remarks	155
II	Advanced theory	159
8	Controlled coverings	161
8.1	Whitney lemma and a theorem about Lipschitz families	163
8.1.1	Auxiliary lemmas	166
8.1.2	Finite overlap	167
8.1.3	Meshing algorithm and the strong engagement lemma	169
8.1.4	Modified Besicovitch q -process	171
8.1.5	Proof of Theorem 8.16	172
8.1.6	Proof of Theorem 8.9	173
8.1.7	Proof of Theorem 8.13	174
8.2	Controlled extension and preservation of the α -capacity	175
8.2.1	The Besicovitch process with a Lipschitz condition	177
8.2.2	Construction of a WB-covering	180
8.2.3	Proof of the controlled extension theorem	183
8.2.4	Proof of the theorem on the preservation of α -capacity for $\alpha \in (1 - \frac{1}{n}, 1)$	185
8.3	Controlled contraction and preservation of the α -capacity	186
8.3.1	Besicovitch q -process with a Lipschitz condition for con- trolled contraction	188
8.3.2	Construction of a WB-covering	190
8.3.3	Proof of the contraction theorem	191
8.4	Preservation of the α -capacity ($\alpha < 0$)	194
	Notes and remarks	196
9	Construction of near-minimizers	197
9.1	Estimates for derivatives of approximants	198
9.2	Near-minimizers for Sobolev spaces: the couples (L^p, \dot{W}_q^k)	200
9.2.1	Near-minimizers for the couple (L^p, \dot{W}_p^k)	201
9.2.2	Near-minimizers for the couple (L^p, \dot{W}_q^k) when $q \neq p$	205
9.2.3	Statement and proof of the main result	209
9.3	Near-minimizers for Morrey–Campanato spaces: the couples $(L^p, \dot{C}_p^{\alpha,k})$	212
9.3.1	Algorithm for constructing near-minimizers	213
9.3.2	Statement and the proof of the main result	214
	Notes and remarks	219

10 Stability of near-minimizers	221
10.1 Construction of approximating polynomials	222
10.2 Stability theorems: statements and applications	227
10.2.1 Statements	227
10.2.2 Applications	229
10.3 Proof of Theorems 10.4–10.6	232
10.3.1 Proof of the main lemma	236
Notes and remarks	241
11 The omitted case of a limit exponent	243
11.1 Description of the algorithm	244
11.2 Principal results, and outlines of the proofs	247
11.2.1 Statement of the main results	247
11.3 Proofs	249
11.3.1 The case of $t \geq t_*$	249
11.3.2 Lemmas valid in the multidimensional case and Theorem 11.3	251
11.3.3 Geometric lemmas and the proofs of Theorems 11.4 and 11.5	255
Notes and remarks	272
A Appendix. Near-minimizers for Brudnyi and Triebel–Lizorkin spaces	273
A.1 Description of the general algorithm	273
A.2 Morrey spaces built on Brudnyi spaces	276
A.2.1 Auxiliary lemmas	279
A.2.2 Proof of the main result (Theorem A.3)	285
A.3 Morrey spaces built on Triebel–Lizorkin spaces	291
A.3.1 Auxiliary lemmas	293
A.3.2 Proof of the main result (Theorem A.12)	300
Notes and remarks	305
Bibliography	305
Index	313

Extremal Problems in Interpolation Theory,
Whitney-Besicovitch Coverings, and Singular Integrals

Kislyakov, S.; Kruglyak, N.

2013, X, 322 p., Hardcover

ISBN: 978-3-0348-0468-4

A product of Birkhäuser Basel
