Preface	ix
1 Preliminaries	
1.1 Banach and Hilbert spaces	1
1.2 Examples of normed spaces	3
1.3 Linear operators	4
1.4 Ordered spaces and Banach lattices	7
1.5 The abstract Gronwall lemma	8
1.6 Integral inequalities	10
1.7 Generalized norms	11
1.8 Causal mappings	12
1.9 Compact operators in a Hilbert space	14
1.10 Regularized determinants	16
1.11 Perturbations of determinants	17
1.12 Matrix functions of bounded variations	19
1.13 Comments	24
2 Some Results of the Matrix Theory	
2.1 Notations	25
2.2 Representations of matrix functions	26
2.3 Norm estimates for resolvents	30
2.4 Spectrum perturbations	32
2.5 Norm estimates for matrix functions	36
2.6 Absolute values of entries of matrix functions	39
2.7 Diagonalizable matrices	42
2.8 Matrix exponential	48
2.9 Matrices with non-negative off-diagonals	51
2.10 Comments	52

3 General Linear Systems

3.1	Description of the problem	53
3.2	Existence of solutions	55
3.3	Fundamental solutions	57
3.4	The generalized Bohl–Perron principle	58
3.5	L^p -version of the Bohl–Perron principle	60
3.6	Equations with infinite delays	63
3.7	Proof of Theorem 3.6.1	64
3.8	Equations with continuous infinite delay	66
3.9	Comments	68

4 Time-invariant Linear Systems with Delay

4.1	Statement of the problem	69
4.2	Application of the Laplace transform	72
4.3	Norms of characteristic matrix functions	74
4.4	Norms of fundamental solutions of time-invariant systems	76
4.5	Systems with scalar delay-distributions	82
4.6	Scalar first-order autonomous equations	83
4.7	Systems with one distributed delay	89
4.8	Estimates via determinants	92
4.9	Stability of diagonally dominant systems	94
4.10	Comments	94

5 Properties of Characteristic Values

5.1	Sums of moduli of characteristic values	95
5.2	Identities for characteristic values	99
5.3	Multiplicative representations of characteristic functions	101
5.4	Perturbations of characteristic values	103
5.5	Perturbations of characteristic determinants	105
5.6	Approximations by polynomial pencils	109
5.7	Convex functions of characteristic values	109
5.8	Comments	111

6 Equations Close to Autonomous and Ordinary Differential Ones

6.1	Equations “close” to ordinary differential ones	113
6.2	Equations with small delays	117
6.3	Nonautonomous systems “close” to autonomous ones	120
6.4	Equations with constant coefficients and variable delays	123
6.5	Proof of Theorem 6.4.1	125
6.6	The fundamental solution of equation (4.1)	127
6.7	Proof of Theorem 6.6.1	129
6.8	Comments	130

7 Periodic Systems

7.1	Preliminary results	131
7.2	The main result	133
7.3	Norm estimates for block matrices	135
7.4	Equations with one distributed delay	136
7.5	Applications of regularized determinants	138
7.6	Comments	141

8 Linear Equations with Oscillating Coefficients

8.1	Vector equations with oscillating coefficients	143
8.2	Proof of Theorem 8.1.1	147
8.3	Scalar equations with several delays	149
8.4	Proof of Theorem 8.3.1	154
8.5	Comments	156

9 Linear Equations with Slowly Varying Coefficients

9.1	The “freezing” method	157
9.2	Proof of Theorem 9.1.1	159
9.3	Perturbations of certain ordinary differential equations	161
9.4	Proof of Theorems 9.3.1	162
9.5	Comments	164

10 Nonlinear Vector Equations

10.1	Definitions and preliminaries	165
10.2	Stability of quasilinear equations	168
10.3	Absolute L^p -stability	171
10.4	Mappings defined on $\Omega(\varrho) \cap L^2$	173
10.5	Exponential stability	175
10.6	Nonlinear equations “close” to ordinary differential ones	177
10.7	Applications of the generalized norm	179
10.8	Systems with positive fundamental solutions	184
10.9	The Nicholson-type system	186
10.10	Input-to-state stability of general systems	189
10.11	Input-to-state stability of systems with one delay in linear parts	190
10.12	Comments	191

11 Scalar Nonlinear Equations

11.1	Preliminary results	193
11.2	Absolute stability	196
11.3	The Aizerman–Myshkis problem	199
11.4	Proofs of Lemmas 11.3.2 and 11.3.4	202
11.5	First-order nonlinear non-autonomous equations	205

11.6 Comparison of Green’s functions to second-order equations 208

11.7 Comments 209

12 Forced Oscillations in Vector Semi-Linear Equations

12.1 Introduction and statement of the main result 211

12.2 Proof of Theorem 12.1.1 213

12.3 Applications of matrix functions 214

12.4 Comments 216

13 Steady States of Differential Delay Equations

13.1 Systems of semilinear equations 217

13.2 Essentially nonlinear systems 219

13.3 Nontrivial steady states 221

13.4 Positive steady states 222

13.5 Systems with differentiable entries 224

13.6 Comments 224

14 Multiplicative Representations of Solutions

14.1 Preliminary results 225

14.2 Volterra equations 228

14.3 Differential delay equations 229

14.4 Comments 230

Appendix A. The General Form of Causal Operators 231

Appendix B. Infinite Block Matrices

B.1 Definitions 235

B.2 Properties of π -Volterra operators 236

B.3 Resolvents of π -triangular operators 238

B.4 Perturbations of block triangular matrices 241

B.5 Block matrices close to triangular ones 245

B.6 Diagonally dominant block matrices 246

B.7 Examples 248

Bibliography 249
