

Contents

1	Auxiliary Materials	1
1.1	Functional Spaces and Embedding Theorems	1
1.2	Linear Elliptic Boundary Value Problems	4
1.3	Nemytskii Operator	8
2	Global Attractors for Autonomous Evolution Equations	17
2.1	Kolmogorov ε -Entropy and Its Asymptotics in Functional Spaces	17
2.2	Global Attractors and Finite-Dimensional Reduction	19
3	Verifying Life Science Models Containing Diffusion, Transport and Interaction of Species	25
3.1	Semilinear Autonomous Case	26
3.2	Quasilinear Autonomous Case	30
3.3	Fully Nonlinear Autonomous Case	52
4	Positivity Criterion for Systems of Stochastic PDEs	59
4.1	Positivity and Stochastic Perturbation of Semilinear Parabolic Systems: The Simplest Case	59
4.2	Positivity Criterion for Semilinear RDS: Non-autonomous Case	65
4.3	Wong-Zakai Approximation and Random Systems of PDEs	73
4.4	Stochastic PDE Case	76
4.5	Necessary and Sufficient Conditions for Comparison Principles: Stochastic Case	82
5	Existence and Longtime Behaviour of a Biofilm Model	87
5.1	Single-Species/Single-Substrate Biofilm Model	87
5.2	A Bioclogging Model That Accounts for Spatial Spreading of Bacteria	111
5.3	Antibiotic Disinfections of Biofilms	129
5.4	Amensalistic Biofilm Control System	155
5.5	Mathematical Model of Quorum Sensing in Patchy Biofilm Communities	167

**6 The Blood Coagulation Cascade in a Perfusion Experiment:
 Example from the Pharmaceutical Industry 195**

 6.1 A Reaction-Diffusion-Advection Model for the Blood Coagulation
 Cascade 196

 6.2 Numerical Simulations Without Adhesion of Platelets 199
