## Part I A Rigorous Approach to Advanced Calculus

<b>1</b>	<b>Preliminaries</b> .....	3
1	Real and complex numbers.....	3
2	Convergent and Cauchy sequences .....	10
3	Continuous functions .....	11
4	Derivatives and the Mean Value Theorem .....	13
5	Uniform convergence .....	18
6	Series. Series of functions .....	19
7	Power series .....	23
8	A few facts about the Riemann integral .....	26
9	Exercises .....	30
<b>2</b>	<b>Metric and Topological Spaces I</b> .....	33
1	Basics .....	33
2	Subspaces and products .....	37
3	Some topological concepts .....	39
4	First remarks on topology .....	43
5	Connected spaces .....	47
6	Compact metric spaces .....	51
7	Completeness .....	54
8	Uniform convergence of sequences of functions. Application: Tietze's Theorems .....	57
9	Exercises .....	62
<b>3</b>	<b>Multivariable Differential Calculus</b> .....	65
1	Real and vector functions of several variables .....	65
2	Partial derivatives. Defining the existence of a total differential .....	66
3	Composition of functions and the chain rule .....	71
4	Partial derivatives of higher order. Interchangeability .....	74
5	The Implicit Functions Theorem I: The case of a single equation ....	77
6	The Implicit Functions Theorem II: The case of several equations ...	81
7	An easy application: regular mappings and the Inverse Function Theorem .....	86

8	Taylor's Theorem, Local Extremes and Extremes with Constraints .....	87
9	Exercises .....	94
<b>4</b>	<b>Integration I: Multivariable Riemann Integral and Basic Ideas Toward the Lebesgue Integral .....</b>	<b>97</b>
1	Riemann integral on an $n$ -dimensional interval .....	97
2	Continuous functions are Riemann integrable.....	100
3	Fubini's Theorem in the continuous case .....	101
4	Uniform convergence and Dini's Theorem .....	102
5	Preparing for an extension of the Riemann integral .....	105
6	A modest extension .....	107
7	A definition of the Lebesgue integral and an important lemma .....	109
8	Sets of measure zero; the concept of "almost everywhere" .....	113
9	Exercises .....	115
<b>5</b>	<b>Integration II: Measurable Functions, Measure and the Techniques of Lebesgue Integration .....</b>	<b>117</b>
1	Lebesgue's Theorems .....	117
2	The class $\Lambda$ (measurable functions) .....	118
3	The Lebesgue measure .....	120
4	The integral over a set .....	123
5	Parameters .....	127
6	Fubini's Theorem .....	128
7	The Substitution Theorem .....	130
8	Hölder's inequality, Minkowski's inequality and $L^p$ -spaces .....	135
9	Exercises .....	141
<b>6</b>	<b>Systems of Ordinary Differential Equations .....</b>	<b>145</b>
1	The problem.....	145
2	Converting a system of ODE's to a system of integral equations .....	147
3	The Lipschitz property and a solution of the integral equation .....	149
4	Existence and uniqueness of a solution of an ODE system .....	151
5	Stability of solutions .....	153
6	A few special differential equations .....	161
7	General substitution, symmetry and infinitesimal symmetry of a differential equation .....	165
8	Symmetry and separation of variables .....	168
9	Exercises .....	172
<b>7</b>	<b>Systems of Linear Differential Equations .....</b>	<b>175</b>
1	The definition and the existence theorem for a system of linear differential equations .....	175
2	Spaces of solutions .....	179
3	Variation of constants .....	181
4	A Linear differential equation of $n$ th order with constant coefficients .....	183

5	Systems of LDE with constant coefficients. An application of Jordan's Theorem .....	187
6	Exercises .....	190
<b>8</b>	<b>Line Integrals and Green's Theorem .....</b>	<b>193</b>
1	Curves and line integrals .....	193
2	Line integrals of the first kind (= according to length) .....	197
3	Line integrals of the second kind .....	199
4	The complex line integral .....	202
5	Green's Theorem.....	204
6	Exercises .....	209

## Part II Analysis and Geometry

<b>9</b>	<b>Metric and Topological Spaces II .....</b>	<b>213</b>
1	Separable and totally bounded metric spaces.....	213
2	More on compact spaces .....	216
3	Baire's Category Theorem .....	219
4	Completion.....	221
5	More on topological spaces: Separation .....	224
6	The space of continuous functions revisited: The Arzelà-Ascoli Theorem and the Stone-Weierstrass Theorem.....	229
7	Exercises .....	234
<b>10</b>	<b>Complex Analysis I: Basic Concepts .....</b>	<b>237</b>
1	The derivative of a complex function. Cauchy-Riemann conditions .....	237
2	From the complex line integral to primitive functions .....	243
3	Cauchy's formula .....	245
4	Taylor's formula, power series, and a uniqueness theorem .....	248
5	Applications: Liouville's Theorem, the Fundamental Theorem of Algebra and a remark on conformal maps .....	252
6	Laurent series, isolated singularities and the Residue Theorem .....	254
7	Exercises .....	263
<b>11</b>	<b>Multilinear Algebra .....</b>	<b>267</b>
1	$\text{Hom}$ and dual vector spaces .....	267
2	Multilinear maps and the tensor product .....	271
3	The exterior (Grassmann) algebra .....	276
4	Exercises .....	284
<b>12</b>	<b>Smooth Manifolds, Differential Forms and Stokes' Theorem .....</b>	<b>287</b>
1	Smooth manifolds .....	287
2	Tangent vectors, vector fields and differential forms.....	292
3	The exterior derivative and integration of differential forms .....	298
4	Integration of differential forms and Stokes' Theorem .....	301
5	Exercises .....	307

<b>13</b>	<b>Complex Analysis II: Further Topics</b> .....	311
1	The Riemann Mapping Theorem .....	312
2	Holomorphic isomorphisms of disks onto polygons and the Schwartz-Christoffel formula .....	317
3	Riemann surfaces, coverings and complex differential forms .....	321
4	The universal covering and multi-valued functions .....	332
5	Complex analysis beyond holomorphic functions .....	340
6	Exercises .....	346
<b>14</b>	<b>Calculus of Variations and the Geodesic Equation</b> .....	349
1	The basic problem of the calculus of variations, and the Euler-Lagrange equations .....	349
2	A few special cases and examples .....	352
3	The geodesic equation .....	356
4	The geometry of geodesics .....	360
5	Exercises .....	365
<b>15</b>	<b>Tensor Calculus and Riemannian Geometry</b> .....	367
1	Tensor calculus .....	368
2	Affine connections .....	371
3	Tensors associated with an affine connection: torsion and curvature .....	374
4	Riemann manifolds .....	378
5	Riemann surfaces and surfaces with Riemann metric .....	381
6	Exercises .....	390
<b>16</b>	<b>Banach and Hilbert Spaces: Elements of Functional Analysis</b> .....	393
1	Banach and Hilbert spaces .....	393
2	Uniformly convex Banach spaces .....	395
3	Orthogonal complements and continuous linear forms .....	397
4	Infinite sums in a Hilbert space and Hilbert bases .....	402
5	The Hahn-Banach Theorem .....	408
6	Dual Banach spaces and reflexivity .....	411
7	The duality of $L^p$ -spaces .....	415
8	Images of Banach spaces under bounded linear maps .....	419
9	Exercises .....	424
<b>17</b>	<b>A Few Applications of Hilbert Spaces</b> .....	427
1	Some preliminaries: Integration by a measure .....	427
2	The spaces $L^p_\mu(X, \mathbb{C})$ and the Radon-Nikodym Theorem .....	432
3	Application: The Fundamental Theorem of (Lebesgue) Calculus.....	435
4	Fourier series and the discrete Fourier transformation .....	440
5	The continuous Fourier transformation .....	443
6	Exercises .....	448

---

<b>A</b>	<b>Linear Algebra I: Vector Spaces</b> .....	451
1	Vector spaces and subspaces .....	451
2	Linear combinations, linear independence .....	454
3	Basis and dimension .....	457
4	Inner products and orthogonality .....	460
5	Linear mappings .....	464
6	Congruences and quotients .....	468
7	Matrices and linear mappings .....	469
8	Exercises .....	474
<b>B</b>	<b>Linear Algebra II: More about Matrices</b> .....	477
1	Transforming a matrix. Rank .....	477
2	Systems of linear equations .....	479
3	Determinants .....	485
4	More about determinants .....	489
5	The Jordan canonical form of a matrix .....	493
6	Exercises .....	498
	<b>Bibliography</b> .....	501
	<b>Index of Symbols</b> .....	503
	<b>Index</b> .....	505

Introduction to Mathematical Analysis

Kriz, I.; Pultr, A.

2013, XX, 510 p. 1 illus. in color., Softcover

ISBN: 978-3-0348-0635-0

A product of Birkhäuser Basel
