1	Introduction	1
1.1	Prelude to Introduction to Fractals	1
1.2	Introduction to Fractals	4
1.3	Misconceptions About Fractals	6
1.4	Fractal's Standing in Contemporary Science	8
1.5	Introduction to Proteins and Protein Exterior	9
1.6	Introduction to Constructs that Investigate Surface Roughness, in General	11
	References	14
2	Characterization of Protein–Protein Interfaces, Considering Surface-Roughness and Local Shape	17
2.1	Introduction to Protein–Protein Interaction Interfaces	17
2.2	Why One Needs Detailed Geometric Characterization of Protein–Protein Interaction Interfaces?	18
2.3	FD-Based Characterizations of Protein–Protein Interaction Interfaces	19
2.4	A Small Study to Probe Antigen–Antibody and Enzyme–Inhibitor Interfaces with Surface FD	20
2.4.1	Algorithms, Theoretical Basis, and Implementation Strategies	22
2.4.2	Results	25
	References	30
3	Adhesion on Protein (and Other Rough Biomolecular) Surfaces	33
3.1	What Is It That We Are Talking About?	33
3.2	Modeling Surface Roughness (in the Context of Studying Contact Mechanics)	35
3.2.1	Description of the System	35
3.2.2	A Brief Note on Surface Coupling	36
3.2.3	Introduction to Contact Mechanics (Single Asperity and Multiple Asperity)	37

3.2.4	Brief Account of Contact Modeling Attempts That were Inspired by Greenwood-Williamson Model	39
3.2.5	Fractal Dimension to Model Contact Surface	40
3.2.6	Problems in Fractal Dimension-Based Modeling	45
3.2.7	Fractal Surfaces and Adhesion	46
3.2.8	Surface Roughness and Friction	49
3.3	Relevance of Studying Contact Mechanics of Biological Macromolecular Surfaces	51
