

Contents

Gamma-Glutamyl Transpeptidases: Structure and Function	1
1 Introduction	1
2 Occurrence, Genes, and Gene Expression	3
2.1 Hepatic Expression of γ -GT	4
2.2 γ -GT Gene Structure	5
2.3 Induction of Hepatic γ -GT	5
2.4 γ -GT-Related Gene Products	6
3 Structure and Function of γ -GTs	6
4 Autoprocessing and Reaction Mechanism of γ -GTs	13
4.1 Autoprocessing	13
4.2 Reaction Mechanism	17
4.3 γ -Glutamyl Binding Site	17
4.4 Acceptor Binding Site	21
4.5 Transpeptidation Versus Hydrolysis	21
4.6 Enzymatic Assays	22
4.7 Biochemical Properties of γ -GTs	23
4.8 Quest for Inhibitors	26
4.9 Inhibitor Mechanisms	27
4.10 Conformational Stability of γ -GTs	29
4.11 Search for Thermostable γ -GTs	30
5 γ -GT in Bioclinical	33
5.1 Pathways of γ -GT Induction	34
5.2 γ -GT and Cancer	35
5.3 γ -GT and Cisplatin Resistance	36
5.4 γ -GT and Tumor Progression	36
5.5 γ -GT as a Target for Anticancer Treatments	37
5.6 γ -GT Complexes: Novel Biomarkers for Cancer and Other Pathologies	38
6 γ -GTs: Biotechnological and Biomedical Applications	39
6.1 γ -GTs in the Production of SCV-07 and of Glutamyl Phenyl Hydrazine Analogs	40
6.2 γ -GTs as Cephalosporin Acylases	41
6.3 γ -GTs as Glutaminases	43

6.4	γ -GTs in the Production of Theanine	43
6.5	γ -GT to Release Drugs	45
7	Conclusions	46
	References	47
