

Contents

1	Introduction	1
1.1	Project Objectives and Organization	3
2	Review of the State of the Art	7
2.1	Low-Power Narrow-Band Transceivers	7
2.2	Super-Regenerative Wide-Band Transceivers	8
2.3	Impulse-Radio Ultra Wide-Band Transceivers	9
2.4	Comparison	10
3	Low Power Strategies	13
3.1	Zero-IF RX Architecture	13
3.2	Minimize the Number of Active RF Blocks	15
3.3	Maximize Impedance of Internal RF Nodes	19
3.4	Low-Complexity Phase-Domain GFSK Demodulator	20
4	Implementation of the Low Power Transceiver	23
4.1	Frequency Synthesizer	23
4.1.1	Selection of Quadrature Generation Topology	24
4.1.2	QVCO with Direct Modulation	34
4.1.3	Finite-Modulo Fractional- N PLL with Spur Compensation	41
4.1.4	Experimental Results	44
4.1.5	Conclusion	51
4.2	Low Power Transceiver Frontend	52
4.2.1	Transformer	54
4.2.2	Frontend Implementation	55
4.2.3	Experimental Results	57
4.2.4	Conclusion	59
4.3	Phase-Domain Zero-IF Demodulator	60
4.3.1	Architecture	60
4.3.2	PGA and Channel Filter	62
4.3.3	Phase-Domain ADC	66
4.3.4	Symbol Decision	73

4.3.5	Experimental Results	74
4.3.6	Conclusions	81
4.4	Overall Transceiver Performance	81
4.5	Conclusions	84
5	Co-integration of RF Energy Harvesting	87
5.1	RF Switch for the Harvester	88
5.1.1	<i>LC</i> -Resonator	89
5.1.2	$\lambda/4$ -Transmission Line	91
5.1.3	Start-Up Rectifier	91
5.1.4	Topology Selection	91
5.2	Architecture	92
5.3	Circuit Design	94
5.3.1	Main Rectifier	94
5.3.2	Start-Up Rectifier	95
5.3.3	OOK-Comparator	96
5.3.4	Supply Management Circuit	97
5.4	Experimental Results	97
5.5	Conclusions	102
6	Conclusions	105
6.1	Future Work	107
	Appendix: Radio Specifications Imposed by the BLE Standard	109
	References	113
	Index	121

Ultra Low Power Transceiver for Wireless Body Area
Networks

Masuch, J.; Delgado-Restituto, M.

2013, VIII, 122 p., Hardcover

ISBN: 978-3-319-00097-8
