1	Introduction	1
	References	3
2	Characterisation and Generation of High Impulse Voltages and Currents	5
2.1	Parameters of High-Voltage Impulses	5
2.1.1	Lightning Impulse Voltages	6
2.1.2	Switching Impulse Voltages	15
2.1.3	Impulse Voltages for On-Site Tests	17
2.1.4	Steep-Front Impulse Voltages	18
2.2	Parameters of High-Current Impulses	18
2.2.1	Exponential Impulse Currents	19
2.2.2	Rectangular Impulse Currents	21
2.2.3	Short-Time Alternating Currents	22
2.3	Generation of High Impulse Voltages and Currents	23
2.3.1	Generators for Lightning and Switching Impulse Voltages	23
2.3.2	Generation of Chopped Impulse Voltages	28
2.3.3	Generation of Steep-Front Impulse Voltages	29
2.3.4	Generators for Exponential Impulse Currents	30
2.3.5	Generation of Rectangular Impulse Currents	34
2.3.6	Generation of Short-Circuit Alternating Currents	35
	References	36
3	Representation of Impulses in Time and Frequency Domain	39
3.1	Analytical Representation of Impulse Voltages	39
3.2	Spectrum of Impulse Voltages	45
3.3	Analytical Representation of Impulse Currents	48
3.4	Spectrum of Exponential Impulse Currents	52
3.5	Analytical Representation of Short-Circuit Alternating Currents	52

4	Transfer Behaviour of Linear Systems and Convolution	55
4.1	Step Response of a System and Convolution Integral.	56
4.2	Fourier Transform and Transfer Function	59
4.3	Laplace Transform.	62
4.4	Properties of RC and RLC Circuits	63
4.4.1	Step Response of Low-Pass Filter and Oscillatory Circuit	64
4.4.2	Transfer Function of Low-Pass Filter and Oscillatory Circuit	66
4.5	Response Time, Rise Time and Bandwidth.	67
4.6	Examples for Convolution	69
4.6.1	Wedge-Shaped Impulse Voltage on RC Circuit.	70
4.6.2	Wedge-Shaped Impulse Voltage on RLC Circuit.	72
4.6.3	Impulse Voltage on RC Circuit.	74
4.6.4	Response Error and Error Diagram	75
4.7	Experimental Step Response	78
4.7.1	Analysis of the Experimental Step Response.	78
4.7.2	Response Parameters of the Step Response.	80
4.7.3	Measuring Circuits for the Step Response.	81
4.7.4	Generation of Step Voltages	83
4.8	Supplementary Observations on Transfer Behaviour	86
	References	90
5	Digital Recorder, Impulse Voltmeter and Impulse Calibrator	93
5.1	Construction and Properties of Digital Recorders	94
5.2	Error Sources During Signal Recording	100
5.2.1	Ideal Digitising	100
5.2.2	Digital Recorder with Real AD Converter	102
5.2.3	Further Sources of Error.	107
5.3	Software for Data Evaluation	109
5.4	Impulse Voltmeter.	111
5.5	Impulse Calibrator.	111
	References	114
6	Measurement of High-Voltage Impulses	117
6.1	Measuring System with High-Voltage Impulse Divider	118
6.1.1	Transfer Behaviour of High-Voltage Impulse Dividers	123
6.1.2	Resistive Impulse Voltage Divider.	129
6.1.3	Capacitive Voltage Divider.	138
6.1.4	Damped Capacitive Impulse Voltage Divider	142
6.1.5	Resistive-Capacitive Mixed Voltage Divider.	151
6.2	Sphere Gap.	153

6.3	Capacitive Field Sensors	155
6.3.1	Principle of the Capacitive Field Sensor	156
6.3.2	Field Sensor for Linearity Proof of Voltage Dividers	158
6.3.3	Three-Dimensional Field Sensor	159
6.4	Electro-Optic Sensor	160
6.4.1	Pockels Effect	160
6.4.2	Kerr Effect	164
	References	165
7	Measurement of High-Current Impulses	169
7.1	Measurement System with Low-Ohmic Measuring Resistor	170
7.1.1	Inductances of a Low-Ohmic Resistor	173
7.1.2	Construction of Coaxial Measuring Resistors	176
7.1.3	Skin Effect	178
7.1.4	Ladder Network as Equivalent Circuit	181
7.1.5	Experimental Step Response of Measuring Resistors	182
7.1.6	Special Types of Construction	183
7.1.7	Limiting Load Integral	185
7.2	Current Measuring Coils Based on the Induction Principle	187
7.2.1	Rogowski Coil	192
7.2.2	Current Measuring Coil with Magnetic Core	197
7.2.3	Direct Current Transformer	198
7.2.4	Magnetic Field Sensor	200
7.3	Current Sensor with Hall Probe	202
7.4	Magneto-Optic Sensor	204
	References	207
8	Calibration of the Measuring Systems	209
8.1	General Information on Calibration and Traceability	210
8.2	Comparison with a Reference System for Impulse Voltage	212
8.2.1	Principle of the Comparative Measurement	213
8.2.2	Assigned Scale Factor	216
8.2.3	Alternatives for the Linearity Proof	218
8.2.4	Measurement of Time Parameters	219
8.2.5	Dynamic Behaviour	219
8.3	Alternative Calibration of Impulse Voltage Measuring Systems	221
8.3.1	Calibration at Low Voltage	222
8.3.2	Evaluation of the Step Response	223
8.3.3	Effect of Neighbouring Objects (Proximity Effect)	224
8.3.4	Short-Term and Long-Term Stability	225
8.4	Calibration of Digital Recorders	227
8.5	Calibration of Impulse Current Measuring Systems	229
	References	232

9 Evaluation of Uncertainties of Measurement	233
9.1 The GUM.	233
9.1.1 Basic Concept of the GUM.	234
9.1.2 Model Function of a Measurement	235
9.1.3 Type A Evaluation Method.	236
9.1.4 Type B Evaluation Method.	238
9.1.5 Combined Standard Uncertainty	240
9.1.6 Expanded Uncertainty	242
9.1.7 Effective Degrees of Freedom.	243
9.1.8 Uncertainty Budget	244
9.1.9 Statement of the Complete Result of a Measurement	244
9.1.10 Concluding Remarks	245
References	246
Appendix A1: Fourier Transform and Laplace Transform	247
Appendix A2: Examples for the Evaluation of Uncertainty	253
