

# Contents

<b>1</b>	<b>Introduction: What is Frustrated Magnetism and Why Should You Care?</b>	<b>1</b>
1.1	Why Study Frustrated Magnetism?	1
1.2	The Microscopic Origins of Magnetism	3
1.3	A Short Introduction to Frustration	6
1.3.1	The Spin-1/2, $J_1$ - $J_2$ Heisenberg Model on a Square Lattice	6
1.3.2	Other Frustrated Systems	9
1.4	Field Theory and Quantum Magnetism	10
1.5	The Iron Pnictide Materials: A Family of Unfrustrated Magnets	12
1.6	The Quantum Spin-Nematic State: How to Make a Liquid Crystal in a Magnet	15
1.7	Thesis Plan	24
	References	25
<b>2</b>	<b>An Introduction to Field Theory in Magnetic Systems: The Néel Antiferromagnet</b>	<b>31</b>
2.1	$\text{La}_2\text{CuO}_4$ , the Néel Antiferromagnet and Spin-Wave Theory	31
2.2	The Quantum Non-Linear Sigma Model as a Description of the Néel Antiferromagnet	34
2.2.1	The Hamiltonian Term	38
2.2.2	The Kinetic Term	39
2.2.3	Eliminating Ferromagnetic Fluctuations	39
2.2.4	Spontaneous Symmetry Breaking	40
2.2.5	The Spin Moments and Correlation Functions	42
2.2.6	The Phase Transition and Renormalisation	42
2.3	The Ginzburg–Landau Model and Critical Dynamics	43
	References	48
<b>3</b>	<b>Angle-Resolved NMR: A Theory of the <math>1/T_1</math> Relaxation Rate in Magnetic Systems</b>	<b>49</b>
3.1	NMR Relaxation Rates in Antiferromagnets	49

3.2	Angle-Resolved Theory of NMR $1/T_1$ Relaxation Rate . . . . .	51
3.2.1	Collinear Magnets . . . . .	56
	References . . . . .	56
<b>4</b>	<b>Theory of the NMR Relaxation Rate in Magnetic Fe-pnictides . . .</b>	<b>59</b>
4.1	$T_1$ in $\text{BaFe}_2\text{As}_2$ : The Experimental Situation . . . . .	59
4.2	Quantitative Theory of $^{75}\text{As}$ $1/T_1$ for Field Parallel to $[110]$ and $[001]$ . . . . .	61
4.2.1	Form Factor . . . . .	62
4.2.2	Dynamical, Longitudinal Susceptibility . . . . .	66
4.2.3	The Relaxation Rate with Field in the $[110]$ -direction . . .	68
4.2.4	The Relaxation Rate with Field in the $c$ -Direction . . . . .	69
4.2.5	Comparison with Experiment . . . . .	71
4.3	Extension of the Predictions to Arbitrary Orientation and Magnitude of Applied Field . . . . .	73
4.4	Quantitative Determination of Spin Wave Velocities from NMR . . . . .	76
4.5	Other Pnictide Materials . . . . .	78
4.6	$T_1$ in Other Temperature Regimes and Systems . . . . .	79
	References . . . . .	80
<b>5</b>	<b>Quantum Spin-Nematic Order: The 3-Sublattice Antiferroquadrupolar State . . . . .</b>	<b>83</b>
5.1	The Spin-1 Bilinear Biquadratic Model and Flavour Wave Theory . . . . .	83
5.2	Continuum Theory at the $\text{SU}(3)$ Point . . . . .	88
5.2.1	Structure of the Ground State Manifold . . . . .	88
5.2.2	Canting of a Plaque . . . . .	90
5.2.3	Continuum Limit . . . . .	91
5.2.4	The Hamiltonian Term . . . . .	93
5.2.5	The Kinetic Term . . . . .	94
5.2.6	Integrating Out Fluctuations . . . . .	95
5.2.7	Linearising the Order Parameter Fields . . . . .	97
5.3	Continuum Theory of Three-Sublattice AFQ Order . . . . .	101
5.3.1	Linearising the Order Parameter Fields . . . . .	104
5.3.2	The Low-Temperature, Low-Energy Limit . . . . .	105
5.3.3	Spin Dynamics . . . . .	106
5.4	Predictions for Inelastic Neutron Scattering . . . . .	107
5.4.1	Single Particle Scattering Near to $\mathbf{k} = \mathbf{q}_K$ . . . . .	109
5.4.2	Single Particle Scattering Near $\mathbf{k} = 0$ . . . . .	110
5.5	Application to $^3\text{He}$ . . . . .	111
5.6	Application to $\text{NiGa}_2\text{S}_4$ . . . . .	111
	References . . . . .	112

<b>6 Quantum Spin-Nematic Order: The 2-Sublattice Antiferroquadrupolar State</b>	113
6.1 Context: 2-Sublattice AFQ Order in Frustrated Ferromagnets	113
6.2 Microscopic Model for Two-Sublattice AFQ Order on a Square Lattice	115
6.2.1 Dispersion of Magnetic Excitations	115
6.2.2 Dynamic Spin Susceptibility and Inelastic Neutron Scattering	116
6.2.3 Mapping Between Spin-1 and Spin-1/2	121
6.3 Continuum Theory of Two-Sublattice AFQ Order	123
6.3.1 Matrix Form of Action	126
6.3.2 Expansion of the Action	126
6.3.3 Dynamical Spin Susceptibility and Inelastic Neutron Scattering	128
6.3.4 $\text{LiCuVO}_4$ in High Magnetic Field	132
References	136
<b>7 How to Recognise the Quantum Spin-Nematic State Using NMR</b>	137
7.1 NMR $1/T_1$ in a Conventional Magnet	138
7.2 NMR $1/T_1$ in an Isotropic AFQ Spin-Nematic	140
7.3 NMR $1/T_1$ in $\text{LiCuVO}_4$ at High Magnetic Field	142
7.4 NMR $1/T_1$ at Low Temperature in the Spin Nematic State	145
References	148
<b>8 Conclusion and Outlook</b>	149
References	151
<b>Appendix A: Calculation of the Longitudinal Susceptibility Relevant to <math>\text{BaFe}_2\text{As}_2</math></b>	153
<b>Appendix B: Spectral Representations of Form Factors</b>	159
<b>Appendix C: Integrating Products of Bose Functions</b>	161
<b>Appendix D: The Form Factor for <math>^7\text{Li}</math> NMR in the Spin-Nematic State</b>	163

Theory of the Nuclear Magnetic  $1/T_1$  Relaxation Rate in  
Conventional and Unconventional Magnets

Smerald, A.

2013, XVI, 165 p., Hardcover
